PROFESSIONAL ENGINEER CERTIFICATION

This Air Sparge System Construction Completion and Performance Monitoring Report (CC-PMR) for the Hypergol Maintenance Facility North (Solid Waste Management Unit 090) at Kennedy Space Center, Florida, dated March 2022, has been prepared by or under the responsible supervision, direction, or control of the Florida-licensed professional engineer whose signature and seal appear below. This document and the work described herein complies with standard professional practices and requirements of Chapter 62-780, Florida Administrative Code (F.A.C) and other rules of the Florida Department of Environmental Protection according to Rule 62-780.400(1), F.A.C.

EXECUTIVE SUMMARY

This Air Sparge (AS) System Construction Completion and Performance Monitoring Report (CC-PMR) presents field implementation activities, as well as Year 1 operation, maintenance, and monitoring (OM&M) activities and performance monitoring results for the AS Interim Measure (IM) at the Hypergol Maintenance Facility North (HMFN) at Kennedy Space Center (KSC), Florida. The timeframe for activities included in this report extends from December 2019 to August 2021.

An AS IM was implemented at HMFN in 2019-2020 to treat a chlorinated solvent groundwater plume that resulted from historic operations supporting the National Aeronautics and Space Administration's (NASA) Space Program. The objective of the AS IM is to actively reduce groundwater concentrations exceeding Florida Department of Environmental Protection (FDEP) Natural Attenuation Default Concentrations (NADCs) (identified as the "High Concentration Plume" [HCP]) to levels that facilitate transition into a Long-Term Monitoring program. The AS IM targets the HCP, with the exception of a source zone area within the HCP where trichloroethene (TCE) exceeds 11,000 micrograms per liter (µg/L), and extends to a depth greater than 45 feet below land surface (bls) in which AS was found to not be conducive based on site lithology. NASA will re-visit plans for potentially utilizing another remedial technology in this area following the AS IM.

This CC-PMR includes the following information:

- AS system installation activities (including installation of wells, piping, manifolds, and trailer), which were conducted between December 2019 and August 2020. The completed system includes 213 AS wells, with screens ranging from 25 feet to 45 feet bls. The AS system is designed to treat approximately 1.6 acres of groundwater.
- AS system start-up and commissioning, which was completed between August and September 2020.
- Performance monitoring activities, which includes baseline groundwater monitoring well sampling in June 2020 (prior to system start-up – 27 wells) and quarterly sampling (after system start-up – 28 wells) in October 2020, January 2021, April 2021, and July 2021.

- OM&M activities for the AS system for the reporting period of August 2020 to August 2021. Ambient air sampling was also conducted as part of Year 1 OM&M.

OM&M activities and results from Year 1 indicate that the AS system at HMFN is operating as designed and meeting performance criteria. The pulse cycles, which operate between 10 treatment zones, are all functioning properly, and the AS wells are operating at the designed flowrates and pressures. The overall runtime of the AS system for the Year 1 reporting period (August 2020 to August 2021) was approximately 82%, with primary downtime attributed to groundwater sampling activities and system maintenance. Air samples collected during the reporting period were less than applicable human health and air emissions permit criteria.

Groundwater performance monitoring results indicate that within the first year of operation, trichloroethene (TCE) concentrations in plume centerline wells across all treated depth intervals have been reduced by more than 97% (average). The highest TCE concentration during baseline sampling (within the vertical treatment zone) was 160,000 µg/L at MW0028, which was reduced to 3,600 µg/L during the July 2021 sampling event. Similarly, cis-1,2-dichloroethene (cDCE) and vinyl chloride (VC) concentration averages of plume centerline monitoring wells across the entire saturated treatment area have been reduced by 98%, and more than 99%, respectively. Following the July 2021 sampling event, groundwater concentrations continue to exceed Groundwater Cleanup Target Levels (GCTLs) in 20 of the 28 performance monitoring wells and NADCs in 8 of the 28 performance monitoring wells.

Based on Year 1 OM&M and performance monitoring results, continued operation of the AS system is required to meet the IM objective. It is recommended to continue with Year 2 AS system OM&M for HMFN, but with the following modifications:

- Continue to operate the AS system throughout Year 2, but with Zone 1 operations discontinued. Operation of Zone 1, which includes 17 AS wells screened within 25 to 32 feet bls in the western portion of the AS well network, is no longer required based on Year 1 performance monitoring results which indicated volatile organic compound (VOC) concentrations have been reduced to less than NADCs in MW0004 and MW0016.

For performance monitoring, a reduced Year 2 monitoring program is recommended, as follows:

- Remove MW0035 and MW0036 from the performance monitoring program. These two monitoring wells will be discontinued based on all VOCs measuring below GCTLs during the last two quarterly sampling events.
- Reduce sampling frequency of MW0046 and MW0047 from quarterly to annual based on two consecutive rounds of sampling results below GCTLs. Annual sampling will continue at these wells to monitor the observed groundwater flow direction reversal away from the borrow pond towards these two wells.
- Reduce sampling frequency at the remaining 24 performance monitoring wells (MW0002, MW0004, MW0008, MW0009, MW0011, MW0016, MW0024, MW0027, MW0028, MW0029, MW0030, MW0031, MW0032, MW0033, MW0034, MW0037, MW0038, MW0039, MW0040, MW0041, MW0042, MW0043, MW0044, and MW0045) from quarterly to semi-annual as outlined in the December 2019 Implementation Work Plan.

Additional recommendations for HMFN include:

- Reduce air sampling to one annual ambient air sampling event during the Year 2 reporting period. This is based on no screening level exceedances detected during any Year 1 air monitoring events.
- Conduct a future direct push technology groundwater sampling investigation to assess system progress and source conditions below the AS IM.
- Following the AS IM, NASA will re-visit plans for potentially utilizing another remedial technology to treat contamination in the deep source zone.

The contents of this CC-PMR, including the above recommendations, were presented at the February 2021 KSCRT Meeting (AS system installation information, Meeting Minute 2102-M12), and the January 2022 KSCRT Meeting (Year 1 performance data) where Team consensus was reached on the recommendations and path forward for HMFN (Meeting Minute 2201-M03, Decision D01).

SECTION I
INTRODUCTION

This Air Sparge (AS) System Construction Completion and Performance Monitoring Report (CC-PMR) presents field implementation activities, and Year 1 operation, maintenance, and monitoring (OM&M) activities and performance monitoring results for the AS Interim Measure (IM) at the Hypergol Maintenance Facility North (HMFN) at Kennedy Space Center (KSC), Florida (Figure 1-1). HMFN has been designated as Solid Waste Management Unit (SWMU) 090 under KSC's Resource Conservation and Recovery Act (RCRA) Corrective Action Program. This document was prepared by Tetra Tech, Inc. (Tetra Tech) for the National Aeronautics and Space Administration (NASA) under Indefinite Delivery Indefinite Quantity (IDIQ) Contract 80KSC019D0011-80KSC019F0081.

This CC-PMR includes the following information:

- AS system installation activities (including installation of wells, piping, manifolds, and trailer), which were conducted between December 2019 and August 2020. The completed system includes 213 AS wells, with screens ranging from 25 feet to 45 feet below land surface (bls). The AS system is designed to treat approximately 1.6 acres of groundwater contamination.
- AS system start-up and commissioning, which was completed between August and September 2020.
- Performance monitoring activities, which includes baseline groundwater monitoring well sampling in June 2020 (prior to system start-up) and quarterly sampling (after system start-up) in October 2020, January 2021, April 2021, and July 2021. Of note, baseline direct push technology (DPT) sampling was completed in 2019 and reported in the Implementation Work Plan (IWP) (NASA, 2019b). This DPT sampling event is discussed in Section 1.3 of this report.
- OM&M activities for the AS System for the reporting period of August 2020 to August 2021. Air sampling was also conducted as part of Year 1 OM&M.

The objective of the HMFN AS IM is to reduce chlorinated volatile organic compound (CVOC) concentrations within the High Concentration Plume ([HCP]; excluding Hot Spot 2 [HS2] Source Zone [SZ]) to concentrations that facilitate a transition to Long Term Monitoring (LTM). The HCP, defined where groundwater concentrations exceed Florida Department of Environmental Protection (FDEP) Natural Attenuation Default Concentrations (NADCs), consists of two Hot Spots (Hot Spot 1 [HS1] and HS2), defined as areas where CVOC concentrations are greater than 10 times NADCs (10x NADCs), as well as two SZs where trichloroethene (TCE) concentrations exceed 11,000 micrograms per liter (µg/L) (NASA, 2017a). Figure 1-3 presents the baseline CVOC plume based on the DPT investigation detailed in the IWP (NASA, 2019b).

1.1 PURPOSE

The purpose of this report is to summarize the activities that were performed to install, operate, and monitor the AS system at HMFN to treat the HCP, as well as present the first year of performance monitoring results. The reporting period for the activities included in this report extends from December 2019 to August 2021. These activities were conducted in accordance with the Interim Measures Work Plan (IMWP) (NASA, 2017a), the IWP (NASA, 2019b), and the Site-Specific Safety and Health Plan (SSHASP) (NASA, 2019a). Recommendations for future OM&M and performance monitoring are also included in this report.

1.2 SITE BACKGROUND

KSC is located on the northern section of Merritt Island, a barrier island bordered on the east by the Banana River Lagoon and west by the Indian River Lagoon (Figure 1-1). HMFN is located within KSC, at the Hypergol/Payload Test Area southeast of the KSC Industrial Area, in Brevard County, Florida (Figure 1-2). The site is located at the corner of 5th Street Southeast (SE) and G Avenue SE and is approximately 1.2 miles west of the Banana River Lagoon. The property encompasses approximately 23 acres. The HMFN area is bordered to the southeast by four borrow ponds encompassing approximately 42 acres, about 0.5 miles west of the Banana River Lagoon. These ponds are bordered to the east by relic interdunal swales running parallel to the shoreline and connecting to Duck Creek, a natural tributary to the Banana River Lagoon.

Properties directly south of HMFN include HMF South, the Hypergol Module Processing (HMP) South Area, the Firex Facility, and HMF.

The HMFN facility was constructed in the 1960s to support the Apollo Space Program. During the Apollo Program, the property was used for office space, laboratory space, and testing and servicing environmental systems for the Apollo Program. Following the Apollo Space Program's closure, the facility was converted to support the Space Shuttle Program. While supporting the Space Shuttle Program, the activities performed at HMFN included refurbishment, testing, encapsulation, propellant (hypergolic fuels) loading, and pressurization of fuel and oxidizer lines for the Space Shuttle orbiter maneuvering system. Structures within HMFN included the Boresight Control Building (M7-0867), the General Warehouse (M7-0912), the Hazardous Waste Staging Area (M7-0862), the Ground Support Equipment Storage Building (M7-1011), Weather Tower 506 (M7-0913), and the former site of the HMP-North Building, demolished in September 2014 (M7-0961) (NASA, 2017a). The locations of these site structures are shown on Figure 1-2.

1.3 SITE CHARACTERIZATION

During the 2007 RCRA Facility Investigation (RFI), volatile organic compounds (VOCs) were identified in groundwater at concentrations exceeding State of Florida Groundwater Cleanup Target Levels (GCTLs). VOCs included TCE, cis-1,2-dichloroethene (cDCE), and vinyl chloride (VC). DPT groundwater sampling conducted during the RFI identified dense non-aqueous phase liquid (DNAPL) within the SZ at HS2. Within this area, TCE was detected at a maximum concentration of 196,000 µg/L. The refrigerant with the trade name Freon-113 (1,1,2-trichlorotrifluoroethane) was also encountered in groundwater during this initial investigation, but at concentrations below its respective GCTL. During supplemental investigation activities, Freon-113 was detected above its GCTL at several DPT locations, and DNAPL (comprised of both Freon-113 and TCE) was visually identified and laboratory confirmed at two DPT locations within the HS2 SZ (NASA, 2017a). Consensus was reached on vertical and horizontal delineation of Freon-113 during the Site Characterization ADP presented to the KSCRT in January 2015. During the most recent October 2019 DPT sampling event, which was conducted

to refine the CVOC plume and AS design for the IWP, Freon-113 was not detected above its GCTL.

Between October 2008 and June 2009, Pilot Test Work Plans for bioremediation and emulsified zero-valent iron (EZVI) were implemented for an area of the HCP, per KSC Remediation Team (KSCRT) consensus following the Pre-Corrective Measures Study (CMS) presentation. The pilot test results indicated a reduction of VOC concentrations via bioremediation; however, maintaining a pH within the optimal target range (6.0 to 8.5) was difficult within the surficial aquifer from ground surface to 20 feet bls. The EZVI portion of the pilot study was postponed so that the HS1 area could be further delineated, per KSCRT recommendations.

Following delineation of HS1 and the low concentration plume (LCP) in December 2012, a Remedial Alternative Evaluation (RAE; formerly referred to as a Step 2 Engineering Evaluation) Advance Data Package (ADP) for HS1 was presented to the KSCRT in May 2013. Consensus was reached to develop an AS/soil vapor extraction (SVE) Pilot Test Work Plan for HS1 remediation. As part of the plan, a geotechnical investigation was conducted prior to the AS/SVE pilot test to identify and assess any lower permeability portions within the groundwater plume. This investigation indicated that soils deeper than 45 feet bls would not be conducive to AS technologies. Therefore, the KSCRT decided that AS/SVE would not be considered as the primary method of groundwater remediation for groundwater impacts greater than 45 feet bls (NASA, 2017a).

Interim Groundwater Monitoring (IGM) was performed in 2014 while delineation of HS2 could be completed. In January 2015, demolition of the HMP North Building (M7-0961) was completed, which was followed by additional DPT sampling performed within the former building's footprint. KSCRT consensus was reached that vertical and horizontal delineation of TCE, Freon-113, cDCE, and VC was achieved for HS2. Based on groundwater sampling results, no appreciable changes were noted within the LCP and HCP; however, additional DPT groundwater sampling was recommended to further delineate the HCP.

The Site Characterization ADP for the supplemental HCP delineation was presented to the KSCRT in September 2016. Consensus was reached that TCE, cDCE, and VC groundwater

plumes comprising HS1 were delineated (NASA, 2017a). Figure 1-3 includes the CVOC groundwater plume presented in the September 2016 Site Characterization ADP.

In October 2016, a RAE for HS1, HS2, and the HCP at HMFN was presented to the KSCRT. Consensus was reached by the KSCRT to evaluate three groundwater remediation options, to include:

1) Implement AS in HS1, HS2, and the HCP, but omitting the HS2 SZ;
2) Potentially inject EZVI in the HS1 SZ after AS activities are completed; and
3) Inject steam and microscale zero-valent iron via large diameter auger (LDA) in the HS2 SZ.

IGM continued at the site until the remedial option was selected and could be implemented (NASA, 2017a). The IMWP for HMFN was presented at the October 2017 KSCRT meeting, providing details of the proposed IM, which included AS design within the HCP, but omitting the HCP SZ. Team consensus was reached on the HMFN AS IMWP (Meeting Minute 1710-M14, Decision 1710-D22). The final IMWP was submitted for regulatory approval in October 2017 following incorporation of Team recommendations from the October KSCRT meeting.

The HMFN IMWP was used as the primary design basis for the HMFN AS system. However, an additional DPT investigation was conducted in October 2019 to confirm site and contaminant conditions since the Site Characterization ADP was presented at the September 2016 KSCRT Meeting. This baseline DPT investigation resulted in a revised HCP delineation and AS network layout that extended further to the southwest than the original IMWP design. Tetra Tech prepared an IWP, which presented the findings of the October 2019 DPT baseline groundwater sampling event and the final AS system design (NASA, 2019b).

Meeting minutes from previous KSCRT meetings are provided in Appendix H for reference.

1.4 LITHOLOGY

Based on soil borings collected during the RFI and supplemental investigations at HMFN, a summary of the lithology is presented below.

- Ground surface to approximately 6 feet bls: grey fine-grained sand.
- Approximately 6 to 10 feet bls: brown sand, with organic material present.
- Approximately 10 to 45 feet bls: intervals of grey and brown fine-grained sands with varying amounts of silts, fragmented shells (varying from 10 to 80 percent). A low permeability, sand with silt and clay layer, was identified at approximately 34 to 38 feet bls.
- Approximately 45 to 50 feet bls: grey clay with silts and fine-grained sand.
- Approximately 50 to 90 feet bls: grey fined-grained sand with silt and fragmented shells.

Soil lithology at HMFN is shown on the cross-sections presented on Figures 1-4 through 1-7.

1.5 HYDROLOGY

The topography of the HMFN area is generally flat; however, a swale approximately 25-feet wide and 2-feet in depth is positioned at the center of the site (orienting from northwest of the site across to southeast of the facility). Standing water is typically present during seasonal rains.

Depth-to-groundwater ranges from approximately 0.5 to 7 feet bls. Based on groundwater elevations collected at site monitoring wells during the previous investigations, groundwater generally flows towards the southeast, toward the nearby borrow ponds. In the 2007 RFI prepared for HMFN, hydraulic conductivity values were determined using a hydraulic profiling tool for the shallow zone (5 to 15 feet bls) and intermediate zone (20 to 30 feet bls) of the surficial aquifer. Hydraulic conductivity values were found to be 4.6 feet per day (ft/day) in the shallow zone and 1.5 ft/day in the intermediate zone. Using these hydraulic conductivity values, groundwater flow velocities were calculated at 8 feet per year (ft/yr) in the shallow zone and 4 ft/yr in the intermediate zone. The screened intervals of the wells used to calculate hydraulic conductivities correspond to the fine-sand to sand with organics, grading into sand with silt comprising the shallow zone, with sand with shells and clay being the predominant layer of the intermediate zone (NASA, 2017a). The lower groundwater flow rates corresponding to the intermediate zone would be expected due to the introduction of clay at this depth.

1.6 INTERIM MEASURE OBJECTIVE

The AS IM objective is to reduce VOC concentrations within the HCP to facilitate transition of the site into monitored natural attenuation (MNA) through LTM. The overall Corrective Action Objective for HMFN is to reduce concentrations of VOCs present in groundwater to levels below their respective GCTLs. Based on performance of the IM, AS operations may be modified, as appropriate, to achieve the IM objective.

The CVOC groundwater plume at HMFN had been divided into six areas.

- LCP defined as an area with individual CVOC concentrations higher than GCTLs but less than NADCs.
- HCP defined as an area with individual CVOC concentrations higher NADCs.
- HS1 defined as areas where VOC concentrations are higher than 10x NADC.
- HS2 defined by VOC concentrations higher than 10x NADC within the former HMP North Building Footprint.
- Source Zone 1 (SZ1) where TCE concentrations exceed 11,000 µg/L.
- Source Zone 2 (SZ2) where TCE concentrations exceed 11,000 µg/L.

The AS IM presented in this document addresses the HCP at HMFN, but excludes SZ2 (located within HS2) due to the depth of contamination below 45 feet bls in which AS was found not to be conducive due to site lithology. Figure 1-3 provides the general footprints of the HCP. The table below (Table 1-1) provides NADC IM cleanup levels, as well as GCTLs for reference.

Table 1-1. Site-Specific Interim Measure Cleanup Levels

Constituent	NADC (µg/L)	GCTL (µg/L)
Trichloroethene	300	3
cis-1,2-Dichloroethene	700	70
trans-1,2-Dichloroethene	1,000	100
Vinyl Chloride	100	1

1.7 INTERIM MEASURE PROJECT TEAM

The HMFN AS IM activities were performed at KSC on behalf of NASA by Tetra Tech, Inc. under IDIQ Contract 80KSC019D0011-80KSC019F0081. Well drilling and installation services at HMFN were provided by Drillpro, LLC (formerly Groundwater Protection, Inc.) of Orlando, Florida. Analytical services for the HMFN baseline and quarterly performance monitoring events were provided by ENCO Laboratories, Inc. of Orlando, Florida. Electrical installation services were provided by Chrome Electric, LLC of Titusville, Florida. Specialized maintenance of the HMFN air compressor was performed by Atlas Copco of Orlando, Florida.

1.8 REPORT ORGANIZATION

The remainder of this document is organized as follows:

Section II: Air Sparge System Construction – This section presents information regarding the construction of the AS system installed for remediation of the identified VOCs in the HCP. The purpose of this section is to provide information certifying that the IM was implemented in accordance with the IWP (NASA, 2019b).

Section III: Baseline Sampling – This section presents the results of the baseline groundwater monitoring conducted prior to start-up of the AS system to verify levels of contamination identified in the IMWP (NASA, 2017a) and IWP (NASA, 2019b), and to provide a baseline for comparison during system operation.

Section IV: System Operation and Maintenance – This section provides information and data collected during start-up of the AS system, including site preparation and mobilization. This section also discusses air monitoring conducted, and details efforts associated with routine events for operation and maintenance of the AS system during Year 1 of operations.

Section V: Performance Monitoring Results – This section provides a summary of the quarterly performance monitoring results collected during Year 1 of operations.

Section VI: Conclusions and Recommendations – This section provides a summary of the activities conducted in support of the IM and presents system operation recommendations based on groundwater monitoring results.

Section VII: References – This section provides a listing of the references cited in this report.

SECTION II
AIR SPARGE SYSTEM CONSTRUCTION

Construction of the HMFN AS system was conducted in accordance with the approved IMWP (NASA, 2017a), the IWP (NASA, 2019b), and SSHASP (NASA, 2019a). The following sections provide an overview of construction activities associated with the AS IM, to include: pre-construction activities, mobilization, and AS system installation. A photographic log of construction activities is presented in Appendix A. Construction completion information was presented to the KSCRT during the February 2021 meeting (Meeting Minute 2102-M12).

2.1 PRE-CONSTRUCTION ACTIVITIES

A project kick-off meeting was held at KSC on October 22, 2019, following the KSC Safety Group's review of the SSHSP. Project details, including construction requirements and components of the IMWP, IWP, and KNPR 8715.7 (KSC Construction Contractor Safety and Health Practices Procedural Requirements), were discussed. Permitting and actions required by the KSC Record of Environmental Consideration (REC), Utility Locate/Excavation Permit, Threatened and Endangered Species Survey, Site Plan, and monitoring well permits were obtained or completed prior to field activities. This information, if not previously provided in the IWP (NASA, 2019b), is included in Appendix B.

2.2 MOBILIZATION

Project details, including KSC-specific construction requirements and components of the IWP (NASA, 2019b) and the SSHASP (NASA, 2019a), were discussed with Tetra Tech field staff and subcontractors prior to initiating installation activities. In addition, a tailgate health and safety meeting was performed each day prior to work and attended by all Tetra Tech field staff and subcontractor personnel.

Before utility locate/clearance, a stake-out survey was conducted to demarcate areas of proposed intrusive activities, and an ecological survey was conducted. During the stake-out survey, the locations of the monitoring wells and the AS well locations were marked with wooden stakes.

Prior to trenching, a Ground Penetrating Radar (GPR) survey was conducted to locate underground utilities and any remaining debris buried at the site due to building demolition. The GPR survey was completed on November 14-15, 2019, by GeoView, Inc. of St. Petersburg, Florida. Utility locations were marked in the field with paint, to include approximate depth at the time of the survey. The GPR Survey Report was provided to field personnel and the utility markings were re-marked periodically. The GPR Survey Report is included in Appendix C.

2.3 WELL INSTALLATION

Well installation activities were conducted from December 2, 2019 to January 29, 2020, and included installation of monitoring wells for performance monitoring, as well as AS wells for remedial system construction. A field geologist was present during all well installation operations and was responsible for oversight of the Florida-licensed drilling subcontractor, geologic logging, recording of well construction details, and decontamination procedures. Soil boring and well construction logs, and monitoring well completion reports for all newly installed monitoring and AS wells are provided in Appendix D. Soil and water generated during the installation and development of wells were handled as Investigation-Derived Waste (IDW) per the KSC IDW Management Plan and as detailed in the HMFN IWP (NASA, 2019b) (see documentation in Appendix I).

2.3.1. Monitoring Well Installation

A total of 21 monitoring wells were installed at varying depths to monitor performance of the AS IM (MW0027 through MW0047). These wells are further discussed in the baseline and performance monitoring sections of this report, and are shown on Figure 3-4. Well construction details for all newly installed monitoring wells are provided in Table 2-1.

Wells were completed using rotosonic drilling techniques. Each monitoring well was constructed in accordance with the IWP using 1-inch inside diameter (I.D.) Schedule 40 polyvinyl chloride (PVC) casing. Casing sections were flush-joint threaded with a neoprene "O" ring on the male threaded end to render the joint airtight. Well screens were 0.010-inch slotted Schedule 40 PVC and were pre-packed with 20/30 grade filter pack. The annular space of the borehole was backfilled with an American Society of Testing and Materials (ASTM) 30/65 fine

sand seal followed by grout (Portland cement-bentonite slurry). The slurry weight of the grout was a minimum of 12.5 pounds per gallon (verified by a mud-scale).

The surface completion at each new monitoring well is either flush-mount or stick-up completion (approximately 3-feet) with an aluminum above-grade protector and centered in a 2-foot by 2-foot concrete pad (see Table 2-1). For clusters in which three or more monitoring wells were installed, the concrete pad measures 6-foot by 2-foot. Well identification tags were also installed for each new well to properly identify and label each well. Following installation of the monitoring wells, each well was developed via purging and evacuation. Each well was professionally surveyed in March 2021 (see Section 2.5).

2.3.2. Air Sparge Well Installation

As shown on Figures 2-1 and 2-2, a total of 213 AS wells were installed within 10 treatment zones, and at depths, angles, and diameters identified in Table 2-2. In accordance with the IWP (NASA, 2019b), the number of AS wells was based on the area of the HCP, the anticipated radius of influence (ROI) ranging from 10 to 20 feet, and the type of lithology within the proposed screen interval (e.g., lower ROIs for less permeable soils and larger ROIs for more permeable soils). At HMFN, an ROI of 20 feet was used for AS wells screened within the 30 foot bls interval and an ROI of 10 feet was used for AS wells within the 30 to 45 foot bls interval. The AS wells were installed using a Geoprobe 8140 sonic drill rig. A total of 69 of the 213 AS wells were installed via angled drilling in order to place the screens beneath the site's drainage swale and G Avenue SE to address contamination not readily accessible via vertical drilling. Construction details for each AS well, including installation angles for each angled well, are provided in Table 2-2. Additional details about the AS well installation process are provided in the following paragraphs.

During advancement of the 4-inch diameter soil boring at each AS well location, a soil core was collected from the bottom 10-feet of the screened interval to confirm lithologic conditions were adequate for AS screen placement. The soil cores were photographed, and the soil lithology was logged by the field geologist. Each AS well was constructed with one of the following three screened intervals (approximate):

- Shallow (25-27 feet bls screened interval),
- Shallow-Intermediate (30-32 feet bls screened interval), or
- Intermediate (43-45 feet bls screened interval).

Of the 213 AS wells, 43 AS wells were constructed with 1-inch I.D. Schedule 40 PVC. This was a modification made to the AS well design in the IWP (vs. using all 2-inch AS wells in the IMWP) based on lessons-learned from other KSC sites, which have shown highly effective treatment results when using 1-inch AS wells in the shallow and shallow-intermediate zones. The 1-inch AS wells were installed to various termination depths and constructed with 1-inch, 40-micron Shumasoil® diffuser wells screens (20 inches in length). Each well casing was constructed of 1-inch I.D. Schedule 40 PVC. The remaining 170 AS wells were constructed of 2-inch I.D. Schedule 40 PVC. The 2-inch AS wells were installed in the 45 foot bls interval (approximate). All 2-inch well screens were constructed with 0.010-inch PVC slotted screens (24-inches in length) with a 1-foot sump. Each well casing was constructed of 2-inch I.D. Schedule 40 PVC.

The filter packs for all AS wells were installed using silica sand of ASTM gradation 20/30. A minimum of 3 feet of bentonite was placed above the filter pack and allowed to hydrate for a minimum of 15 minutes before grouting the wells. Wells were grouted to the surface with a slurry of Portland cement and bentonite. The slurry weight was a minimum of 12.5 pounds per gallon (verified by a mud-scale). The well annulus was pressurized to ensure an adequate seal between the grout and native material. Each AS well was developed until the purge water was clear, which was typically after 5 to 15 gallons of groundwater were purged.

Following trenching and piping activities (described below in Section 2.4), a threaded plug was placed at the top-end of the well tee-fitting and in the port of the tee-fitting. The wellhead was buried with hand-compacted soil, and the soil was brought to grade. Three metal stakes were driven flush with the ground surface in the immediate vicinity of each AS well to aid in locating the well in the future.

2.4 AIR SPARGE SYSTEM INSTALLATION

Mobilization for installation of the AS system was conducted from January 27-31, 2020. Mobilization activities included delivery of straw waddle for erosion control, open excavation signage, concrete mixer, excavation equipment, and high-density polyethylene (HDPE) piping spool.

Trenching and piping installation activities were performed from January to March 2020. The header trenching network was excavated to a depth of 24-inches for installation of compressed air conveyance piping from the AS system trailer to each respective distribution manifold trailer or cabinet (see information on distribution manifolds below). From each distribution manifold trailer or cabinet, lateral piping was trenched and installed to each of the 213 AS wells. Soft digging was conducted where trenches were within three feet of identified utilities. The header trenching and lateral trenching layout, as well as cross-sectional details of the trenches, are shown on Figure 2-2 and Figure 2-3, respectively. During excavation activities, straw swaddles were placed around the newly installed monitoring wells to avoid sediment migration, and trenches were dug sequentially from south to north to facilitate safe machinery operation.

For AS well connection, AS wellheads were modified to accept the AS conveyance piping. One-inch I.D. Standard Diameter Ratio (SDR)-11 HDPE compressed air conveyance piping was installed from the manifold cabinet or trailer location to each AS well. Connections of HDPE piping sections and fittings were welded via socket fusion with a heater plate assembly following piping manufacturer recommendations for heating and cooling times.

From March to June 2020, the manifold infrastructure for the AS system was installed, which included two distribution manifold cabinets and two distribution manifold trailers. The two distribution manifold cabinets were installed in centrally located areas to the well groupings located on the east side of G Avenue SE, as shown in Figure 2-2. The enclosures for each distribution manifold cabinet were placed on a concrete pad with dimensions of 48 inches (width) by 84 inches (length) by 4 inches (depth). The feet of the enclosures were anchored to the concrete pad via 0.5-inch-diameter by 2.5-inch-long anchor bolts. The two distribution manifold trailers were installed in areas centrally located to the well groupings located on the

west side of G Avenue SE, as shown on Figure 2-2. Manifold blocks were installed and wall-mounted in trailers with approximate dimensions of 8.5 feet by 24 feet. The trailers were leveled and anchored to the subsurface per the Trailer/Equipment Tiedown Plan (NASA, 2001).

From June 8-24, 2020, the header and lateral lines were plumbed to the manifold trailers and cabinets. The manifolds were connected directly to the main header lines, which run directly from the AS trailer. The airflow from the compressor in the AS trailer is split via solenoid valves into 13 header legs (10 legs utilized, with three spares). From each manifold outlet, quick-connect fittings, a flow meter (0 to 14 standard cubic feet per minute [scfm]), flow regulating needle valve, and pressure gauge (0 to 110 pound per square inch gauge [psig] scale range) were installed on each line. Check valves were installed on the outlets following the pressure gauge and exit the back of the manifold enclosure through the 5/8-inch opening via push-connect bulkhead fittings. Flexible polyurethane tubing was connected to the bulkhead fittings to push-connect adapters on the 1-inch lateral stub-up from each well. The airflow at each AS well is independently adjustable, and each AS well has a dedicated manual flow control valve, flow meter, check valve, and pressure gauge at each manifold leg. Each manifold leg can be removed and repaired via compressed air push-connect fittings.

In August 2020, the prefabricated AS system was installed south of the GSE Storage Building (M7-1011). The AS trailer was shop-fabricated, including plumbing, wiring, and controls by MAE2 of Bluffton, South Carolina. The trailer consists of a 125-horsepower rotary screw air compressor, refrigerated air dryer, thermostat-controlled air conditioner, gauges, and control panels equipped with a remote telemetry system for off-site operation and notification of system outages. The piping and instrumentation diagram for the AS trailer is provided as Figure 2-4.

Electrical installation was performed from July 14-29, 2020 by Chrome Electric, LLC of Titusville, Florida. Trenching was performed for electrical conduit installation and cables were pulled through the conduit.

Single-conductor #10 insulated wire and detectable utility marking tape was installed in all trenches at a depth of approximately 6-inches bls for future utility detection. Trenches were

backfilled with native soil, compacted, and resurfaced to match existing conditions. All disturbed areas were re-seeded.

2.5 AS-BUILT SURVEY

Surveying was conducted by a Florida-licensed land surveyor on March 26-29, 2021 to provide as-built details for the HMFN AS system. The survey included general topography and significant existing features such as concrete structures, new monitoring wells, and AS system features. Each monitoring well was marked with a notch on the riser pipe to indicate the proper survey (and water level measurement) location. Horizontal locations were measured to the third order, in meters, and relative to the Florida State Plane Coordinate System, East Zone (North American Datum [NAD] of 1983). Vertical locations were referenced to the North American Vertical Datum (NAVD) of 1988 with 0.1-foot precision for ground elevations and 0.01-foot precision for top of casing (TOC) elevations. Well survey documentation is included in Appendix D.

Table 2-1. Monitoring Well Construction Details

Well Name (HMFN-)	Installation Date	Well Diameter (inches)	Screen Type	Flush or Above-grade Completion	Total Well Depth (feet)	Screened Interval (feet bls)	T.O.C Elevation (feet above msl)	Coordinates

Notes:

ft bls = feet below land surface.

All final air sparge well surface completion is subsurface.

Air sparge wells were installed between December 2, 2019 and January 29, 2020.

All air sparge well coordinates were collected by field hand-held Global Positioning System with submeter accuracy.

SECTION III
BASELINE SAMPLING

A baseline groundwater monitoring event was conducted prior to start-up and operation of the AS system to verify levels of contamination identified in the IMWP (NASA, 2017a) and IWP (NASA, 2019b), as well as to provide a baseline for comparison during system operation. Air quality was monitored during sampling activities using a Photoionization Detector (PID).

3.1 GROUNDWATER SAMPLING METHODS

Baseline groundwater sampling was conducted from June 2-5, 2020 (before system start-up) and included the sampling of 27 performance monitoring wells (see Table 5-1 for list of baseline sampling wells). Groundwater sampling activities were conducted in accordance with the KSC Sampling and Analysis Plan (SAP) for the RCRA Program at KSC (NASA, 2017b) and FDEP Standard Operating Procedure FS 2200 (FDEP, 2017). Baseline depth-to-water was recorded on June 1, 2020. Peristaltic pumps were used for purging and sampling. Baseline dissolved oxygen (DO) concentrations were recorded, and VOC samples were collected using a low-flow sampling technique. During monitoring activities, PID readings were collected from the breathing zone continuously each day. No PID readings higher than background were observed. Samples were submitted to ENCO of Orlando, FL for analysis of VOCs via Method SW-846 8260B. Sample log sheets are provided in Appendix E, and chain-of-custody forms and laboratory analytical results are provided in Appendix F.

3.2 BASELINE GROUNDWATER RESULTS

Based on depth-to-water measurements collected during the baseline sampling event in June 2020, groundwater generally flows to the east/southeast toward the borrow ponds, as shown in Figures 3-1 through 3-3. For wells screened in the intermediate zone from 20-40 feet bls, groundwater flows towards the northeast with a shallow gradient before turning to the southeast and flowing at a steeper gradient toward the borrow pond to the east of G Avenue SE.

The results of the baseline groundwater sampling event for the contaminants of concern (COCs) (TCE, cDCE, trans-1,2-dichloroethene [tDCE], VC, and Freon 113) are summarized in

Table 3-1; this table also includes data from quarterly performance monitoring events, which are later discussed in Section V. Monitoring well locations (in relation to AS radius of influence) are presented on Figure 3-4, and baseline data is presented on Figures 5-14 through 5-16, which also shows data from the quarterly performance monitoring events later discussed in Section V.

TCE was detected in 17 of the 27 groundwater samples collected, with 13 of those samples above the NADC of 300 µg/L. The highest TCE concentration of 240,000 µg/L was observed at monitoring well MW0028, which is screened from 45 to 50 feet bls. In general, the highest TCE concentrations were detected in monitoring wells screened between 40 to 50 feet bls within SZ2 (160,000 µg/L at MW0027; 120,000 µg/L at MW0032; and 83,000 µg/L at MW0033).

Concentrations of cDCE ranged from less than 0.53 µg/L to 42,000 µg/L. The highest cDCE concentrations of 42,000 µg/L and 38,000 µg/L were measured in groundwater collected from MW0032 and MW0033, respectively. MW0032 and MW0033 are both screened in SZ2 (40 to 45 ft bls and 45 to 50 ft bls, respectively), within the western HS2 area. tDCE was only detected in groundwater collected from two monitoring wells (MW0035 and MW0038) with concentrations of 58 I µg/L and 2.8 µg/L, respectively. It should be noted though that nine of the samples with non-detect results for tDCE were collected from monitoring wells with elevated cDCE concentrations; one of the non-detect locations had detection limits above the GCTL for tDCE of 100 µg/L, and one sample with a non-detect result had a detection limit above the NADC of 1,000 µg/L.

VC was detected above the GCTL and NADC in groundwater collected from 24 of the 27 monitoring wells sampled during the June 2020 baseline sampling event. The highest VC concentration of 41,000 µg/L was detected in MW0031, which is screened from 30 to 40 feet bls in SZ2, within the western hot spot, HS2.

Concentrations of Freon-113 in groundwater collected during the June 2020 baseline sampling event ranged from less than 0.73 µg/L to 82,000 µg/L. All detections of Freon-113 were below the GCTL of 210,000 µg/L.

3.3 BASELINE AIR MONITORING

During construction activities, PID readings were collected from the breathing zone continuously each day. No PID readings were detected above pre-construction ambient air conditions.

Prior to and during system start-up, 8-hour composite air samples were collected from two locations, as shown on Figure 3-4. HMFN-VMP01 is located in the vicinity of the AS and manifold trailers and HMFN-VMP02 is located on the northern edge of the M7-1011 parking lot. The air samples were collected on five sampling dates between August 18, 2020 and September 9, 2020 using a 6-liter Summa canister and an 8-hour composite pressure regulator. The Summa canister samples were analyzed by ENCO Laboratories, Inc. of Jacksonville, Florida, using USEPA Method TO-15.

No analytes were detected at concentrations exceeding the Occupational Safety and Health Administration (OSHA) Permissible Exposure Limits (PELs) or American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Value (TLV) during these sampling events. Table 3-2 provides a summary of the air sample collection dates and laboratory analytical results for corresponding groundwater COCs. Laboratory analytical results are provided in Appendix F.

Notes:

Concentrations in micrograms per liter (µg/L).
Bold indicates a concentration is greater than the method detection limit.
Shading indicates State of Florida Groundwater Cleanup Target Level (GCTL) exceedance,
TCE = 3 µg/L, cDCE = 70 µg/L, tDCE = 100 µg/L, VC = 1 µg/L, Freon 113 = 210,000 µg/L.
bls = below land surface.
U = Value was reported as below the method detection limit, therefore the detection limit is shown.
I = Value is between method detection limit and practical quantitation limit.
cDCE = cis-1,2-dichloroethene.
TCE = trichloroethene.
tDCE = trans-1,2-dichloroethene.
VC = vinyl chloride.
MW0024, MW0028, and MW0033 are screened below the AS treatment interval of 45 feet bls

SECTION IV
SYSTEM OPERATION AND MAINTENANCE

This section identifies the activities conducted during start-up and commissioning, full-scale operation, and Year 1 OM&M for the HMFN AS system. Air monitoring activities are also discussed in this section. The Year 1 reporting period for AS operations presented in this report runs from August 2020 to August 2021. System start-up and full-scall operational information was presented to the KSCRT during the February 2021 meeting (Meeting Minute 2102-M12) and January 2022 meeting (Meeting Minute 2201-M03).

4.1 SYSTEM START-UP

AS system commissioning and start-up procedures were initiated on August 19, 2020 and continued through September 4, 2020. The objective of commissioning was to confirm that the AS system had been constructed as designed and operates as specified to facilitate any necessary modifications to the system, as well as to gather and evaluate initial operational data.

The inspections verified that all the components of the system, below and above ground, were properly installed in accordance with the IWP (NASA, 2019b). A site-specific checklist was completed to ensure that all equipment and instrumentation were properly prepared and lubricated and that protective covers on rotating equipment were in place. Inspections of equipment lockout, safety valves and/or pressure relief devices, and site security devices were also completed. Performance checks and individual component testing were performed to verify that the manifold legs cycled appropriately.

Start-up of the AS system was performed sequentially, with focus on each specific unit at a given time. The strategy for start-up was to conduct these activities sequentially in order to compare observations and test data to design and performance criteria. The start-up check-out involved demonstrating proper functionality of the fail-safe instrumentation and logic, rotary screw air compressor, refrigerated air dryer, all valves and orifices, and condensate treatment. All related health, safety, and emergency response procedures were in place and reviewed before the start-

up phase of operation. Before process systems were started, a final check was conducted on the alignment and positioning of all motor drives, valves, safety devices, and control setpoints.

After operation was verified and acceptable at the AS system location, conditions were inspected at the distribution manifolds. At the distribution manifolds, all wells were initially set at 5.0 cfm and at pressures of 15, 18, and 27 psig in the shallow, shallow-intermediate, and intermediate depths, respectively. The distribution manifolds were checked to ensure that the wellhead pressure applied to each well was within design. The pressure regulators at the system manifolds were adjusted to reach the following pressures at the lateral pressure gauges:

- Leg 1 (shallow) – 15.0 psig;
- Leg 2 (shallow intermediate) – 18.3 psig;
- Leg 3 (shallow-intermediate) – 18.3 psig;
- Leg 4 (intermediate) – 26.8 psig;
- Leg 5 (intermediate) – 26.8 psig;
- Leg 6 (intermediate) – 26.8 psig;
- Leg 7 (intermediate) – 26.8 psig;
- Leg 8 (intermediate) – 26.8 psig;
- Leg 9 (intermediate) – 26.8 psig; and
- Leg 10 (intermediate) – 26.8 psig.

After the system was running within the expected operating conditions and in accordance with the flow design provided in Table 4-1, the entire system was checked. Readings for flow and pressure at each AS well were collected, as well as operational flows, pressures, and temperatures at all monitoring points in the system. Field data recorded during system start-up included temperature and pressure readings at the air dryer discharge and manifold legs, and the total flow from the discharge of the air compressor and manifold legs. In addition, headspace within select performance monitoring wells was screened once per week for the first four weeks of operation with a PID for health and safety monitoring, as well as to verify surface emissions of COCs were in compliance with the KSC Title V Air Operation Permit. During the start-up phase, OM&M activities were performed daily during Week 1 to conduct troubleshooting and

debugging activities, as well as to ensure that the system operated as designed. The equipment operations manual was followed for detailed direction of system OM&M.

Start-up activities concluded when the design and equipment performance was documented to comply with specifications, and the system was ready for transition into the OM&M phase. All relevant observations collected in the start-up field logbook are provided in Appendix G. System adjustments were made until the system reached a steady-state condition wherein all design criteria were satisfied. Steady-state operation occurred when all systems were running without shutdowns, the mechanical systems were functioning, and the flowrates stabilized. At that point, commissioning and startup of the system was considered complete.

4.2 SYSTEM OPERATION

Following completion of commissioning and start-up activities on September 4, 2020, the AS system entered steady-state operation. Prove-out OM&M was performed for the remaining first month of operation to ensure all components of the AS system continued to operate within the design parameters.

Following Month 1 of operation, the remedial system operated as a stand-alone system and only required monthly OM&M visits. Monthly OM&M visits included the following:

- Inspection of the AS system for leakage and excessive vibration, noise, or temperature;
- Inspection of oil levels and lubrication;
- Inspection of the condensate treatment system;
- Inspection of the refrigerated air dryer;
- Assessment of differential pressure across filtration units and process equipment;
- Recording of system operational data and comparing data to design conditions and previous operating data; and
- Performing housekeeping.

The system was operated in automatic mode, with the ON/OFF/AUTO and START/STOP functions of the system controlled by the Programmable Logic Controller (PLC) and observed through a Windows-based Human-Machine Interface (HMI). Table 4-1 shows the initial flow

design and pulse cycle that ran from start-up to February 2021, as well as the modified flow and pulse cycle from February 2021 onward based on optimization and balancing. Air sparging flows were able to consistently meet the design flow rate of 5 cubic feet per minute (cfm). During each site visit, the AS wells were observed to meet the design pressures for each respective depth of 15.0 pound per square inch (psi) (shallow depth), 18.3 psi (shallow-intermediate depth), and 26.8 psi (intermediate depth).

The system was shut down for various monitoring and maintenance activities throughout the Year 1 operational period. The AS system (including receiver tank, manifolds, etc.) and associated process lines were depressurized prior to conducting maintenance activities. The AS system was shut-down approximately one week prior to each groundwater sampling event in October 2020, January/February 2021, April 2021, and July 2021, and during completion of professional surveying in March 2021. Additional system shutdowns included:

- An air compressor general alarm in February 2021
- Receiver tank high pressure in March 2021
- HMI malfunction and firmware update in May 2021
- 8,000-hour compressor service in August 2021
- Cleaning of a minor clog in the oil-water separator in August 2021

A summary of system runtime and system downtime during Year 1 is provided in Table 4-2. The overall runtime over the reporting period (August 2020 to August 2021) was 81.7%.

SECTION V
PERFORMANCE MONITORING

Performance monitoring was conducted to establish if the AS system is operating properly and if additional action or adjustments are needed. This section discusses the performance monitoring program to evaluate the progress and performance of the HMFN AS IM. As stated in Section 4.2, the AS system was shut-down approximately one week prior to each groundwater sampling event. Year 1 performance monitoring activities and results were presented to the KSCRT during the January 2022 meeting (Meeting Minute 2201-M03).

5.1 PERFORMANCE MONITORING PROGRAM

Groundwater performance monitoring was conducted on a quarterly basis during the first year of operation in October 2020, January 2021, April 2021, and July 2021. A total of 28 performance monitoring wells were sampled during each event, which included the 27 monitoring wells sampled during the June 2020 baseline sampling event (described in Section III), as well as MW0016 which was added to the performance monitoring network to provide horizontal coverage of the plume to the west. The locations of the 28 performance monitoring wells are shown on Figure 5-1. All groundwater samples collected were analyzed for VOCs by USEPA Method 8260D. Table 5-1 summarizes the performance monitoring program locations, sampling rationale, frequencies, and analytes.

Prior to groundwater sample collection, depth-to-water measurements were obtained from each performance monitoring well to generate groundwater elevation contour maps and determine groundwater flow direction. Low-flow sampling techniques were employed during groundwater sampling activities, and each monitoring well was purged and sampled using a peristaltic pump and dedicated HDPE tubing. Sample tubing was placed at the mid-point of the well screen. All monitoring wells were purged and sampled in accordance with FDEP SOPs, and applicable sections of the KSC SAP for the RCRA Corrective Action Program (NASA, 2017b). All purge water generated through sampling was containerized on-site in new 55-gallon drums. The drums were placed on a NASA-provided spill pallet and the bell cover was secured with a strap. The

bell cover and drums were labeled. Each drum of purge water was sampled and characterized for disposal. IDW information is provided in Appendix I.

Headspace within all 28 performance monitoring wells was screened with a PID during each performance monitoring event for health and safety monitoring. In addition, 8-hour composite air samples were collected on November 11, 2020, February 10, 2021, April 26, 2021, and July 26, 2021 from the two locations shown in Figure 5-1 (HMFN-VMP01, located in the vicinity of the AS air manifold trailers and HMFN-VMP02, located on the northern edge of the M7-1011 parking lot). The air samples were collected using a 6-liter Summa canister and an 8-hour composite pressure regulator. The Summa canister samples were analyzed by ENCO Laboratories, Inc. of Jacksonville, Florida, using USEPA Method TO-15. These samples were used for health and safety monitoring, as well as to verify compliance with the KSC Title V Air Operation Permit. No analytes were detected during any of these sampling events (Table 3-2).

Sample log sheets are provided in Appendix E, and chain-of-custody forms and laboratory analytical results for all groundwater and air samples are provided in Appendix F.

5.2 PERFORMANCE MONITORING RESULTS

The results of groundwater performance monitoring events were used to assess and confirm the performance of the AS IM and to support optimization of the IM. The Year 1 analytical groundwater results are shown with the baseline results in Table 3-1. A groundwater elevation summary table for the four quarterly performance monitoring events is provided in Table 5-2. Baseline groundwater water levels are also provided in Table 5-2 for reference. Field measurement data including pH, temperature, conductivity, turbidity, DO and oxidation reduction potential (ORP) is shown in Table 5-3. These data are discussed in the following sections.

5.2.1. Water Levels

Water levels were measured at 27 permanent monitoring wells during the baseline event in June 2020 (See Section III of this report) and 28 permanent monitoring wells (with MW0016 added following the baseline event) during quarterly events after AS system start-up. These synoptic

measurements were converted to groundwater elevations (See Table 5-2), organized into shallow (5 to 20 feet bls), intermediate (20-40 feet bls), and deep (greater than 40 feet bls) zones in accordance with the screened intervals, and interpreted onto groundwater contour maps. The resulting potentiometric surface maps, presented as Figures 3-1 to 3-3 for the baseline event prior to system start-up, and Figures 5-2 to 5-13 for the October 2020, January 2021, April 2021, and July 2021 post-startup quarterly events, were used to illustrate the behavior of groundwater flow specific to each zone and measurement event, and how flow may be affected by AS system operations. The following presents a more detailed discussion of the groundwater flow trends as AS system operations progressed during its first year of operation.

5.2.1.1 Potentiometric Surface Of The Shallow Zone

During Year 1 of AS system operation, groundwater flow in the shallow zone of the surficial aquifer showed an initial flow trend to the southeast after three months of AS system operation (October 2020) with an inward radial component and high point at MW0036, then continuing to flow in a southeastern direction toward the borrow pond. After six months of AS system operation (January 2021), groundwater flow became more southward with a local groundwater flow direction reversal away from the borrow pond toward the AS treatment area. In April 2021, there was a strong northwestern flow trend from the borrow pond area toward the site and an eastern flow from MW0016, marking the western edge of the site toward the AS treatment area, which showed continued evidence of AS system influence and local flow predominance toward the treatment area.

5.2.1.2 Potentiometric Surface of the Intermediate Zone

Flow within the intermediate zone of the surficial aquifer at HMFN goes from a northeastern flow, bending to a steeper gradient toward the borrow pond during pre-AS system operation conditions, and then becoming more uniform in October 2020 after the initial quarter of operation. In January 2021, after approximately six months of AS system operation, the groundwater flow reverses at a steep hydraulic gradient from the borrow pond toward G Avenue SE, mounding near MW0039 and continuing a northwestern trend toward the AS treatment area. Flow patterns in April 2021 within the intermediate zone of the surficial aquifer continue to the northwest toward the center and bending slightly to the west at a shallower gradient across the

treatment area. In July 2021, the potentiometric surface within the intermediate zone continues to flow to the northwest away from the borrow pond and converging gradually toward the center of the AS treatment area from the west.

5.2.1.3 Potentiometric Surface of the Deep Zone

The potentiometric surface of the deep zone measured during baseline in June 2020, prior to AS system operation, generally flows from the west to the east, with the potential for radial flow toward the center of the site. This radial trend is inferred due to insufficient groundwater level data within this zone. A general flow from the east and northeast is observed after the first quarter of Year 1 AS system operation, with this eastern trend continuing from the west after the second quarter, but with flow reversal to the southwest at MW0040, located along the western edge of G Avenue SE. This flow reversal is probably an indication of increased influence of AS system operation on groundwater flow conditions at this depth. In April 2021, with continued AS system operation, groundwater flow occurs radially toward the center of the treatment within this deep zone, with potentiometric lows at MW0032 and MW0042. After one year of AS system operation, groundwater flow occurs to the east toward the center of the AS treatment area with low areas found closer to G Avenue SE in the vicinity of MW0042.

5.2.2. Field Measurements

Temperature, pH, specific conductance, DO, turbidity, and ORP were measured and recorded in the field during monitoring well sampling activities. These field measurements, compiled during baseline sampling activities in June 2020 and also during the quarterly sampling events during the initial year of AS system operation, are summarized in Table 5-3. The sample log sheets prepared in the field are presented in Appendix E. For each well, groundwater was pumped using a low-flow technique and field readings were collected at set time intervals until the readings stabilized. At that time, a groundwater sample was collected for laboratory analysis. The field measurements were collected and stabilized in accordance with FDEP's Standard Operating Procedures for Field Sampling (FS 2200) before groundwater sample collection, ensuring samples were representative of surficial aquifer conditions. The water pumped from each well was collected and managed as IDW (see IDW logs included in Appendix I). The

following presents a summary of field measurements taken prior to each of the quarterly sampling events conducted during Year 1 of AS system operation at HMFN.

During the June 2020 baseline sampling event, groundwater temperatures in 24 wells sampled ranged from 23.53 to 25.53 °C, with an average of 24.26 °C. Readings of pH ranged from 6.13 to 11.61, with an average of 8.46. Specific conductance ranged from 183 to 4,377 microSiemens per centimeter (µS/cm), with an average of 2,088 µS/cm. DO values varied from 0.06 to 0.71 milligrams per liter (mg/L), with an average value of 0.26 mg/L. Turbidity readings ranged from 0.43 to 35.90 nephelometric units (NTU), with an average value of 6.62 NTU. ORP readings ranged from -308.1 to 625.9 millivolts (mV), with an average reading of -51.8 mV.

During the October 2020 first quarter sampling event, groundwater temperatures in 26 wells sampled ranged from 22.60 to 29.50 °C, with an average of 25.64 °C. Readings of pH ranged from 2.82 to 7.80, with an average of 6.86. Specific conductance ranged from 45.9 to 5,138 µS/cm, with an average of 3,223 µS/cm. DO values varied from 0.02 to 4.02 mg/L, with an average value of 1.11 mg/L. Turbidity readings ranged from 0.13 to 14.80 NTU, with an average value of 6.53 NTU. ORP readings ranged from -158.1 to 376.3 mV, with an average reading of 40.5 mV.

During the January 2021 second quarter sampling event, groundwater temperatures in 28 wells sampled ranged from 16.90 to 25.20 °C, with an average of 21.81 °C. Readings of pH ranged from 2.58 to 7.14, with an average of 6.02. Specific conductance ranged from 573 to 5,166 µS/cm, with an average of 3,597 µS/cm. DO values varied from 0.05 to 5.32 mg/L, with an average value of 0.92 mg/L. Turbidity readings ranged from 1.13 to 47.30 NTU, with an average value of 16.45 NTU. ORP readings ranged from 21.3 to 300.0 mV, with an average reading of 162.3 mV.

During the April 2021 third quarter sampling event, groundwater temperatures in 28 wells sampled ranged from 21.20 to 26.20 °C, with an average of 24.20 °C. Readings of pH ranged from 3.26 to 7.64, with an average of 6.57. Specific conductance ranged from 1,194 to 5,773 µS/cm, with an average of 3,998 µS/cm. DO values varied from 0.07 to 9.03 mg/L, with an average value of 2.08 mg/L. Turbidity readings ranged from 0.46 to 72.60 NTU, with an

average value of 10.48 NTU. ORP readings ranged from 36.0 to 388.9 mV, with an average reading of 215.4 mV.

During the July 2021 fourth quarter sampling event, groundwater temperatures in 28 wells sampled ranged from 26.60 to 30.80 °C, with an average of 29.03 °C. Readings of pH ranged from 3.33 to 7.56, with an average of 6.60. Specific conductance ranged from 2,107 to 6,444 µS/cm, with an average of 4,437 µS/cm. DO values varied from 0.01 to 7.36 mg/L, with an average value of 1.21 mg/L. Turbidity readings ranged from 1.39 to 96.40 NTU, with an average value of 14.90 NTU. ORP readings ranged from -123.9 to 426.5 mV, with an average reading of 110.7 mV.

Overall, field parameter data was relatively consistent between sampling events; however, pH readings from several wells showed a wide-range of values over the reporting period. No issues were identified with stabilization or equipment calibration, and review of historical field parameter data did not find overall similar or inconsistent readings from the past. Field parameter data will continue to be collected and evaluated during future sampling events to determine if there are any seasonal or data trends as active AS operations continue.

5.2.3. Groundwater Analytical Results

Quarterly performance monitoring groundwater samples were collected and analyzed in accordance with the prescribed schedule and analyte list. A summary of results for the baseline event and Year 1 quarterly performance monitoring events for the site's primary COCs are presented in Table 3-1. Laboratory analytical reports are provided in Appendix F. Analytical data is presented on Figures 5-14 to 5-16, with trend graphs presented on Figures 5-17 to 5-19.

5.2.3.1 First Quarter Results - October 2020

First quarter performance monitoring activities were conducted from October 26-28, 2020, approximately two months after completion of system start-up activities.

Maximum concentrations of TCE, cDCE, tDCE, and VC in October 2020 were 400,000 µg/L, 24,000 µg/L, 6.9 µg/L, and 950 µg/L, respectively. Of the 28 samples, 11 (39 percent of samples) had concentrations of at least one COC greater than NADCs during this sampling

event. October 2020 groundwater sample locations and performance monitoring results, including NADC exceedances, are shown on Figures 5-14, 5-15, and 5-16 for the shallow, intermediate, and deep intervals, respectively.

Shallow Wells: After two months of system operation, concentrations of TCE, cDCE, tDCE, and VC were reduced to below NADC levels in all eight shallow wells screened between 5 and 20 feet bls (MW0004, MW0009, MW0016, MW0029, MW0034, MW0036, MW0037, and MW0046). Only MW0009 reported TCE concentrations above the NADC or GCTL during baseline sampling, and TCE decreased from 320 µg/L to 190 µg/L during the first quarter of operations. tDCE concentrations continued to not be detected above the GCTL of 100 µg/L in shallow monitoring wells. cDCE concentrations in groundwater at MW0029, which is located within the source zone and centerline of the plume, decreased from 13,000 µg/L to 310 µg/L, which represents a reduction of more than 97%. During baseline sampling TCE, cDCE, and VC concentrations in groundwater at MW0009 exceeded NADCs, and concentrations for these contaminants were reduced by 41%, 90%, and 98%, respectively, to below NADCs two months after system operation, during the October 2020 sampling event.

Intermediate Wells: After two months of system operation, concentrations of TCE, cDCE, tDCE, and VC were reduced to below 10x NADC levels in all 12 intermediate wells screened between 20 and 40 feet bls (MW0002, MW0008, MW0011, MW0030, MW0031, MW0035, MW0038, MW0039, MW0041, MW0043, MW0045, and MW0047). Concentrations of TCE within the plume centerline decreased significantly during the first two months of operation, as indicated by VOC concentrations in groundwater at MW0030 and MW0031 where TCE decreased from 14,000 µg/L to 180 µg/L (99% reduction) and from 8,400 µg/L to 1,100 µg/L (87% reduction). Concentrations of cDCE and VC in groundwater at these monitoring wells were also significantly reduced during the first quarter of operation.

Deep Wells (within treatment interval): During the October 2020 sampling event, VOC concentrations in groundwater at the five deep monitoring wells screened deeper than 40 feet bls and within the treatment interval (MW0027, MW0032, MW0040, MW0042, and MW0044) generally decreased, but remained elevated above 10x NADC for TCE and cDCE at several

monitoring wells. For example, TCE in groundwater at MW0032 decreased from 120,000 µg/L to 14,000 µg/L during the first quarter of AS operation, which represents a reduction of 88%. TCE, cDCE, and VC were all reduced to below NADCs at MW0040, which was within the 10x NADC impacted area.

Deep Wells (below treatment interval): Three wells screened below the target treatment depth (MW0024, MW0028, and MW0033) were also sampled during the October 2020 sampling event. At MW0024, VOCs were either not detected or detected at very low concentrations (less than 1 µg/L), which is screened from 55-65 feet bls below the impacted aquifer. At MW0028 and MW0033, which are screened 45-50 feet bls, TCE, cDCE, and VC generally decreased with the exception of TCE concentrations at MW0028 which increased from 240,000 µg/L during the baseline event to 400,000 µg/L during the October 2020 sampling event. MW0028 is screened within the source zone, below the targeted treatment depth.

Freon: Concentrations of Freon-113 in groundwater collected during the October 2020 performance monitoring sampling event ranged from less than 0.73 µg/L to 120,000 µg/L. All detections of Freon-113 were below the GCTL of 210,000 µg/L. In general, Freon-113 concentrations decreased in groundwater collected from monitoring wells screened in the shallow and intermediate intervals from 5 feet to 40 feet bls during the first quarter of operations. Freon-113 was detected in three of the eight monitoring wells screened greater than 40 feet bls, with concentrations at MW0027 and MW0028 increasing during the first quarter of operation compared to baseline concentrations, and concentrations at MW0044 decreasing compared to baseline concentrations.

5.2.3.2 Second Quarter Results - January 2021

Second quarter performance monitoring activities were conducted from January 28, 2021 to February 1, 2021, approximately five months after completion of system start-up activities.

Maximum concentrations of TCE, cDCE, tDCE, and VC in January 2021 were 460,000 µg/L, 21,000 µg/L, 6.0 µg/L, and 990 µg/L, respectively. Eight of the 28 samples (29 percent of samples) had concentrations of at least one COC greater than the NADC during this sampling event. January 2021 groundwater sample locations and performance monitoring results,

including NADC exceedances, are shown on Figures 5-14, 5-15, and 5-16 for the shallow, intermediate, and deep intervals, respectively.

Shallow Wells: After five months of system operation, concentrations of TCE, cDCE, tDCE, and VC continued to measure below NADC levels in all eight shallow wells screened between 5 and 20 feet bls (MW0004, MW0009, MW0016, MW0029, MW0034, MW0036, MW0037, and MW0046). Only MW0009 detected TCE concentrations above the GCTL during baseline sampling, and TCE continued to decrease from 190 µg/L (first quarter) to 49 µg/L during the second quarter of operations. cDCE concentrations in groundwater at MW0029, which is located within the source zone and centerline of the plume, continued to decrease during the second quarter of operation from 310 µg/L during October 2020 to 48 µg/L during January 2021, which represents a reduction of more than 99% from the baseline concentration of 13,000 µg/L. cDCE concentrations in groundwater at MW0034 was similarly reduced to below the GCTL of 70 µg/L during the second quarter of operation.

Intermediate Wells: After five months of system operation, concentrations of TCE, cDCE, tDCE, and VC continued to measure below 10x NADC levels in all 12 intermediate wells screened between 20 and 40 feet bls (MW0002, MW0008, MW0011, MW0030, MW0031, MW0035, MW0038, MW0039, MW0041, MW0043, MW0045, and MW0047). Concentrations of TCE within the plume centerline decreased significantly during the second quarter of operations, as indicated by concentrations in groundwater at MW0031 (1,100 µg/L in October 2020 to 510 µg/L in January 2021). Groundwater at MW0031 also measured below the NADC for cDCE and VC with reductions of 1,600 µg/L to 490 µg/L for cDCE (15,000 µg/L during baseline) and from 54 µg/L to 13 I µg/L (41,000 µg/L during baseline) for VC during the second quarter of AS system operation. In all, during the January 2021 event, only three of the 11 intermediate wells screened between 20 and 40 feet bls measured above the NADC for at least one VOC contaminant (MW0002, MW0031, and MW0039).

Deep Wells (within treatment interval): During the January 2021 sampling event, VOC concentrations in groundwater at the five deep monitoring wells screened deeper than 40 feet bls and within the treatment interval (MW0027, MW0032, MW0040, MW0042, and MW0044)

generally decreased, but remained elevated above 10x NADC for TCE at several monitoring wells. For example, TCE in groundwater at MW0032 decreased from 120,000 µg/L to 14,000 µg/L during the first quarter of AS operation, and to 7,400 µg/L during the second quarter of operation, which represents an overall reduction of 94%. cDCE, and VC were reduced to below 10x NADCs at all five of the deep monitoring wells during the January 2021 sampling event, with detected concentrations ranging from 56 µg/L to 5,700 µg/L for cDCE and 12 µg/L to 170 µg/L for VC.

Deep Wells (below treatment interval): Three wells screened below the target treatment depth (MW0024, MW0028, and MW0033) were also sampled during the January 2021 sampling event. VOCs were not detected above sample detection limits at MW0024, which is screened from 55-65 feet bls below the impacted aquifer. TCE, cDCE, and VC concentrations were relatively stable at MW0028 and MW0033 compared to the first quarter October 2020 results. TCE concentrations at MW0028, which is screened in the source zone below the targeted treatment depth, continued to increase from 400,000 µg/L during the October 2020 sampling event to 460,000 µg/L during the January 2021 sampling event.

Freon: Concentrations of Freon-113 in groundwater collected during the January 2021 performance monitoring sampling event ranged from less than 0.73 µg/L to 110,000 µg/L. All detections of Freon-113 were below the GCTL of 210,000 µg/L. In general, Freon-113 concentrations decreased in groundwater collected from monitoring wells screened in the shallow and intermediate intervals from 5 feet to 40 feet bls during the second quarter of operations. Freon-113 was detected in three of the eight monitoring wells screened greater than 40 feet bls (MW0027, MW0028, and MW0044), with concentrations of Freon-113 at these monitoring wells similar to first quarter results.

5.2.3.3 Third Quarter Results - April 2021

Third quarter performance monitoring activities were conducted from April 16-21, 2021, approximately eight months after completion of system start-up activities.

Maximum concentrations of TCE, cDCE, tDCE, and VC in April 2021 were 430,000 µg/L, 21,000 µg/L, 5.7 µg/L, and 910 µg/L, respectively. Ten of the 28 samples (36 percent of

samples) had concentrations of at least one COC greater than NADCs during this sampling event. April 2021 groundwater sample locations and performance monitoring results, including NADC exceedances, are shown on Figures 5-14, 5-15, and 5-16 for the shallow, intermediate, and deep intervals, respectively.

Shallow Wells: After eight months of system operation, concentrations of TCE, cDCE, tDCE, and VC continued to measure below NADCs in all eight shallow wells screened between 5 and 20 feet bls (MW0004, MW0009, MW0016, MW0029, MW0034, MW0036, MW0037, and MW0046). Only MW0009 reported TCE concentrations above the GCTL during baseline sampling, and TCE decreased to 13 µg/L during the third quarter of operations. cDCE concentrations in groundwater at MW0009, which is located within the 10x NADC impacted area, continued to decrease during the third quarter of operation from 360 µg/L in January 2021 to 74 µg/L during April 2021, which represents a reduction of 99% from the baseline concentration of 6,700 µg/L. cDCE concentrations in groundwater at all seven of the other shallow monitoring wells measured below the GCTL of 70 µg/L during the third quarter of operation.

Intermediate Wells: After eight months of system operation, concentrations of TCE, cDCE, tDCE, and VC continued to measure below 10x NADC levels in all 12 intermediate wells screened between 20 and 40 feet bls (MW0002, MW0008, MW0011, MW0030, MW0031, MW0035, MW0038, MW0039, MW0041, MW0043, MW0045, and MW0047). With the exception of samples collected from MW0002 and MW0031, which are both located within the source zone and plume centerline, groundwater at intermediate monitoring wells measured less than NADCs for TCE, cDCE, and tDCE during the third quarter of operation.

Concentrations of TCE within the plume centerline rebounded slightly during the third quarter of operation. TCE concentration in groundwater at MW0031 increased from 510 µg/L to 1,400 µg/L during the April 2021 sampling event, which still represents an overall reduction of 83% compared to the baseline concentration of 8,400 µg/L. Similarly, cDCE concentration in groundwater from MW0031 increased from 490 µg/L to 1,500 µg/L, which still represents an overall reduction of 90% compared to the baseline concentration of 15,000 µg/L. With the

exception of groundwater collected from MW0039 (200 µg/L VC), groundwater at all intermediate monitoring wells measured below the NADC for VC.

Deep Wells (within treatment interval): During the April 2021 sampling event, TCE concentrations in groundwater at the five deep monitoring wells screened deeper than 40 feet bls and within the treatment interval (MW0027, MW0032, MW0040, MW0042, and MW0044) rebounded slightly in three of the five monitoring wells and remained elevated above the NADCs for VOCs at four of the five monitoring wells. TCE in groundwater at MW0032 continued to decrease during the third quarter, reducing from 7,400 µg/L to 5,400 µg/L, which represents an overall reduction of 96% compared to the baseline concentration of 120,000 µg/L. cDCE and VC continued to be reduced to below 10x NADCs at all five of the deep monitoring wells during the April 2021 sampling event, with detected concentrations ranging from 17 µg/L to 5,200 µg/L for cDCE and 1.5 J µg/L to 180 µg/L for VC.

Deep Wells (below treatment interval): Three wells screened below the target treatment depth (MW0024, MW0028, and MW0033) were also sampled during the April 2021 sampling event. VOCs were either not detected or detected at very low concentrations (less than 1 µg/L) at MW0024, which is screened from 55-65 feet bls below the impacted aquifer. TCE, cDCE, and VC concentrations were relatively stable at MW0028 and MW0033 compared to the second quarter January 2021 results. TCE concentrations at MW0028, which is screened in the source zone below the targeted treatment depth, continued to measure the highest of all samples collected at 430,000 µg/L.

Freon: Concentrations of Freon-113 in groundwater collected during the April 2021 performance monitoring sampling event ranged from less than 0.73 µg/L to 140,000 µg/L. All detections of Freon-113 were below the GCTL of 210,000 µg/L. In general, Freon-113 concentrations decreased in groundwater collected from monitoring wells screened in the shallow and intermediate intervals from 5 feet to 40 feet bls during third quarter operations. Freon-113 was detected in three of the eight monitoring wells screened greater than 40 feet bls, and concentrations at two of these wells increased relative to second quarter results (MW0027 and MW0028) and decreased at the other (MW0044).

5.2.3.4 Fourth Quarter Results - July 2021

Fourth quarter performance monitoring activities were conducted from July 19-23, 2021, approximately 11 months after completion of system start-up activities.

Maximum concentrations of TCE, cDCE, tDCE, and VC in July 2021 were 490,000 µg/L, 15,000 µg/L, 0.77 µg/L, and 890 µg/L, respectively. Eight of the 28 samples (29 percent of samples) had concentrations of at least one COC greater than NADCs during this sampling event. July 2021 groundwater sample locations and performance monitoring results, including NADC exceedances, are shown on Figures 5-14, 5-15, and 5-16 for the shallow, intermediate, and deep intervals, respectively.

Shallow Wells: After eleven months of system operation, concentrations of TCE, cDCE, tDCE, and VC continued to measure below NADCs in all eight shallow wells screened between 5 and 20 feet bls (MW0004, MW0009, MW0016, MW0029, MW0034, MW0036, MW0037, and MW0046). The highest cDCE concentrations in shallow groundwater continued to be detected at MW0009, where cDCE measured 76 µg/L during the July 2021 sampling event. cDCE concentrations in groundwater at all seven other shallow monitoring wells continued to measure below the GCTL of 70 µg/L during the fourth quarter of operation. Similarly, of the six shallow wells where VC concentrations were above the NADC of 100 µg/L during the June 2020 baseline event, groundwater concentrations at five of these wells have been reduced to less than the GCTL of 1 µg/L during the fourth quarter of operation.

Intermediate Wells: After eleven months of system operation, concentrations of TCE, cDCE, tDCE, and VC continued to decrease, with concentrations below NADCs for each COC in 10 of the 12 intermediate wells screened between 20 and 40 feet bls (MW0002, MW0008, MW0011, MW0030, MW0035, MW0038, MW0041, MW0043, MW0045, and MW0047). Exceptions include samples collected from MW0031 and MW0039, where NADC exceedances include detections of 310 µg/L TCE at MW0031 and 150 µg/L VC at MW0039. After concentrations of TCE within the plume centerline rebounded slightly during the third quarter of operation, TCE concentrations in groundwater decreased to the lowest detected levels during the first year of system operation.

Deep Wells (within treatment interval): During the July 2021 sampling event, TCE concentrations in groundwater at two of the five deep monitoring wells screened deeper than 40 feet bls and within the treatment interval (MW0027 and MW0042) generally continued to indicate higher concentrations than those measured during previous quarterly sampling events. Concentrations at MW0032, MW0040, and MW0044 continued to decrease during the fourth quarter of operation. For example, TCE in groundwater at MW0032 reduced from 5,400 µg/L in April 2021 to 3,600 µg/L in July 2021, with an overall reduction of 97% compared to the baseline concentration of 120,000 µg/L. cDCE, and VC continued to decrease to below 10x NADCs at all five deep monitoring wells during the July 2021 sampling event, with detected concentrations ranging from 19 µg/L to 4,900 µg/L for cDCE and 1.7 J µg/L to 260 µg/L for VC.

Deep Wells (below treatment interval): Three wells screened below the target treatment depth (MW0024, MW0028, and MW0033) were also sampled during the July 2021 sampling event. VOCs were not detected above the sample detection limits at MW0024, which is screened from 55-65 feet bls below the impacted aquifer. TCE, cDCE, and VC concentrations were relatively stable at MW0028 and MW0033 compared to the second and third quarter results. TCE concentrations at MW0028, which is screened in the source zone below the targeted treatment depth, continued to measure the highest of all samples collected at 490,000 µg/L.

Freon: Concentrations of Freon-113 in groundwater collected during the July 2021 performance monitoring sampling event ranged from less than 0.73 µg/L to 120,000 µg/L. All detections of Freon-113 were below the GCTL of 210,000 µg/L. In general, Freon-113 concentrations decreased in groundwater collected from monitoring wells screened in the shallow and intermediate intervals from 5 feet to 40 feet bls during third quarter operations. Freon-113 was detected in three of the eight monitoring wells screened greater than 40 feet bls, and concentrations at these three monitoring wells (MW0027, MW0028, and MW0044) were relatively stable compared to previous performance sampling events.

5.3 PERFORMANCE EVALUTION AND CONTAMINANT REDUCTION

Trend analysis graphs for TCE, cDCE, and VC are provided in Figures 5-17 through 5-19, respectively, with an overview provided for each interval below. Concentration reduction

calculations for TCE, cDCE, and VC are included in Tables 5-4 to 5-6, respectively. The percent reduction values presented in this section (when referencing multiple wells for a certain contaminant) are based on the geometric means between the baseline and July 2021 datasets.

Shallow: The baseline plume generally mimics baseline groundwater flow orientation towards the borrow pond, with GCTL exceedances encountered adjacent to the northwest shore of the pond. In the vicinity of the source zone, 10x NADC exceedances were encountered during the June 2020 baseline sampling event in the shallow zone.

During the first year of IM operations, groundwater concentrations in the shallow plume decreased to just above GCTLs for TCE, cDCE, and VC (Figure 5-14). No exceedances of tDCE were detected during the Year 1 performance sampling events within the shallow zone (Figure 5-14).

In the shallow interval from 5 to 20 feet bls, one sample collected from monitoring well (MW0009) had a detection of TCE greater than the GCTL during baseline sampling. TCE concentrations at MW0009 decreased from 320 µg/L to 13 µg/L over the course of Year 1 operations, which represents a 96% reduction of TCE since baseline sampling. During the July 2021 sampling event, groundwater at three shallow wells (MW0004, MW0009, and MW0029) measured above the GCTL with the highest TCE concentration of 12 µg/L at MW0004. Groundwater cDCE concentrations at the seven monitoring wells where cDCE was detected above the GCTL (MW0004, MW009, MW0029, MW0034, MW0036, MW0037, and MW0046) have been reduced by 99% (average) compared to baseline concentrations. Similarly, VC concentrations in the shallow interval have been reduced by more than 99% (average) over the first year of operations compared to baseline concentrations.

Intermediate: The baseline intermediate plume mimics baseline flow orientation toward the borrow pond, but with a decrease in western and southeastern extent. The area of the plume with 10x NADC exceedances increases from shallow to intermediate depths. No exceedances of tDCE were detected during the Year 1 performance sampling events within the intermediate zone. In the intermediate interval from 20 to 40 feet bls, groundwater TCE concentrations at the seven monitoring wells where TCE was detected above the GCTL (MW0002, MW0008,

MW0030, MW0031, MW0035, MW0039, and MW0043) have been reduced by 99% (average) compared to baseline conditions. Similarly, cDCE concentrations at the nine monitoring wells where cDCE was detected above the GCTL (MW0002, MW0008, MW0011, MW0030, MW0031, MW0035, MW0039, MW0043, and MW0041) have been reduced by 99% (average) during Year 1 operations. VC concentrations in the intermediate interval have also been reduced by more than 99% (average) over the first year of operations compared to baseline concentrations.

Deep: During Year 1 operations, the deep plume orientation elongated in the east-west direction compared to baseline conditions. The deep plume has a larger areal extent of exceedances between NADC and 10x NADC compared to the intermediate interval. Although the aerial extent of the deep plume decreased during Year 1 operations, TCE, cDCE, and VC concentrations in groundwater continued to exceed 10x NADCs. tDCE continues to be un-detected, but laboratory dilution factors did not allow detection sensitivity at lower concentrations. The 10x NADC and 100x NADC areas of the deep plume are comparable to the TCE source zone. Located in the source zone, monitoring wells MW0027 (screened 40-45 feet bls, within the treatment interval) and MW0028 (screened 45-50 feet bls, below the treatment interval) showed large fluctuations in TCE concentrations throughout the Year 1 sampling events. While MW0032 and MW0033, which are also screened in the source zone, have shown consistent decreases in TCE concentration throughout the sampling events, MW0042 showed increasing concentrations during the April 2021 and July 2021 sampling events. Overall TCE concentrations at MW0044 decreased over the course of Year 1 sampling events.

At MW0024, screened from 55-65 feet bls, concentrations reduced to non-detect by July 2021, likely due to its position below a confining layer. Nearby wells, with a screen depth of 50 feet bls (MW0027 and MW0028) showed TCE and cDCE concentrations exceeding 10x NADC, with TCE levels exceeding 100x NADC within these source zone locations (from June 2020 to July 2021 sampling events). This data suggests a vertical extent of TCE within this interval, which indicates that treatment below the air sparging well network is not appreciably occurring.

Overall Contaminant Reduction: After the first year of operation, overall reduction in contaminant concentrations for TCE, cDCE, and VC were approximately 94%, 97%, and 99%, respectively (see Tables 5-4 to 5-6). These values are based on the geometric means between the baseline and July 2021 datasets. Reduction calculations for individual wells are also provided in the tables.

Table 5-1. Year 1 Performance Monitoring Network

Montoring Well (HMFN-)	Screen Interval (ft bls)	Monitoring Function	June 2020 (Baseline)	October 2020	January 2021	April 2021	July 2021
MW0002	[30-40]	Within SZ and centerline of the plume (HS1).	X	X	X	X	X
MW0004	[5-15]	Within VOC NADC impacted area and centerline of the plume (HS1).	X	X	X	X	X
MW0008	[20-30]	Within VOC 100xNADC impacted area and centerline of the plume (HS1).	X	X	X	X	X
MW0009	[5-15]	Within shallow interval of 10xNADC impacted area.	X	X	X	X	X
MW0011	[20-30]	Within CVOC 10xNADC impacted area; TCE and VC exceedances in December 2011.	X	X	X	X	X
MW0016	[5-15]	Provides horizontal delineation of plume to the west.		X	X	X	X
MW0024	[55-65]	Within HS SZ.	X	X	X	X	X
MW0027	[40-45]	Within HS SZ.	X	X	X	X	X
MW0028	[45-50]	Within HS SZ.	X	X	X	X	X
MW0029	[10-20]	Within HS1 SZ and centerline of the plume.	X	X	X	X	X
MW0030	[20-30]	Within HS1 SZ and centerline of the plume.	X	X	X	X	X
MW0031	[30-40]	Within HS1 SZ and centerline of the plume.	X	X	X	X	X
MW0032	[40-45]	Within HS1 SZ and centerline of the plume.	X	X	X	X	X
MW0033	[45-50]	Within HS1 SZ and centerline of the plume.	X	X	X	X	X
MW0034	[10-20]	Within 100xNADC impacted area centerline of the plume (HS1).	X	X	X	X	X
MW0035	[30-40]	Within 100xNADC impacted area centerline of the plume (HS1).	X	X	X	X	X
MW0036	[10-20]	Within 100xNADC impacted area centerline of the plume (HS1).	X	X	X	X	X
MW0037	[5-15]	Within 10xNADC impacted area centerline of the plume (HS1).	X	X	X	X	X
MW0038	[15-25]	Within 10xNADC impacted area centerline of the plume (HS1).	X	X	X	X	X
MW0039	[30-40]	Within 10xNADC impacted area (HS2).	X	X	X	X	X
MW0040	[40-45]	Within 10xNADC impacted area (HS2).	X	X	X	X	X
MW0041	[30-40]	Within 10xNADC impacted area (HS2).	X	X	X	X	X
MW0042	[40-45]	Within 10xNADC impacted area (HS2).	X	X	X	X	X
MW0043	[30-40]	Within 10xNADC impacted area (HS2).	X	X	X	X	X
MW0044	[40-45]	Within 10xNADC impacted area (HS2).	X	X	X	X	X
MW0045	[25-35]	Within Hot Spot 1 Source Zone (HS1).	X	X	X	X	X
MW0046	[10-20]	Within 100xNADC impacted area (HS1).	X	X	X	X	X
MW0047	[20-30]	Within 100xNADC impacted area (HS1).	X	X	X	X	X

Notes:
X = Sampled for VOCs via EPA method 8260B (*Note: MW0016 added to network after baseline event)
ft bls = feet below land surface.
HCP = High Concentration Plume.
HS = Hot Spot.
NADC = Natural Attenuation Default Concentrations.
SZ = Source Zone.
VOC = volatile organic compound.

Notes:
Field measurements displayed are final stabilized measurements collected before sampling.
SC = Specific conductance in microSiemens per centimeter (µS/cm).
DO = Dissolved oxygen in milligrams per liter (mg/L).
Turb. = Turbidity in nephelometric turbidity units (NTUs).
ORP = Oxidation/reduction potential in millivolts (mV).
NM = Not measured.
S.U. = Standard Units.
°C = Degree Celcius.
Values have been rounded from the source material field notes as follows: conductivity has been rounded to the nearest whole number, temperature and turbidity are shown to 2 decimal places, and ORP is shown to one decimal place.
*Information not available due to issues with electronic purge log files.
**Samples collected outside of FDEP FS 2200 stabilization Standard Operating Procedures.

Legend

- Monitoring Well
- Source Zone TCE 11,000 ug/L (Historical, 2016)
- > GCTL (LCP)
- Between NADC and 10xNADC
- Exceeding 10x NADC

Note: Contours are based on the most recent quarterly event data.

Detected Concentration (µg/L)
I = Reported value between Method Detection Limit (MDL) and Practical Quantitation Limit
J = Estimated value
U = Not detected at or above MDL (associated value)
[10-20] = Depth Interval in feet below land surface
LCP = Low Concentration Plume
HCP = High Concentration Plume
GCTL = State of Florida Groundwater Cleanup Target Level
NADC = Natural Attenuation Default Concentration
Pink highlights signify concentrations above GCTL
Red highlights signify concentrations above NADC
Yellow highlights signify results less than MDL but exceeds the NADC.
TCE = Trichloroethene cDCE = cis-1,2-Dichloroethene
tDCE = trans-1,2-Dichloroethene VC = Vinyl Chloride

G Avenue SE

Legend

- Monitoring Well
- Source Zone TCE 11,000 ug/L (Historical, 2016)
- ≥ GCTL (LCP)
- Between NADC and 10xNADC
- Exceeding 10x NADC
- GCTL Exceedance (inferred)

Detected Concentration (µg/L)
I = Reported value between Method Detection Limit (MDL) and Practical Quantitation Limit
J = Estimated value
U = Not detected at or above MDL (associated value)
[10-20] = Depth Interval in feet below land surface
LCP = Low Concentration Plume
HCP = High Concentration Plume
GCTL = State of Florida Groundwater Cleanup Target Level
NADC = Natural Attenuation Default Concentration
Pink highlights signify concentrations above GCTL
Red highlights signify concentrations above NADC
Yellow highlights signify results less than MDL but exceeds the NADC.
TCE = Trichloroethene cDCE = cis-1,2-Dichloroethene
tDCE = trans-1,2-Dichloroethene VC = Vinyl Chloride

Notes:
1) * Concentrations at this depth below GCTL; probably due to position of confining layer
2) Contours are based on the most recent quarterly event data.
3) MW0024, MW0028, and MW0033 are screened below the AS treatment interval of 45 ft bls.

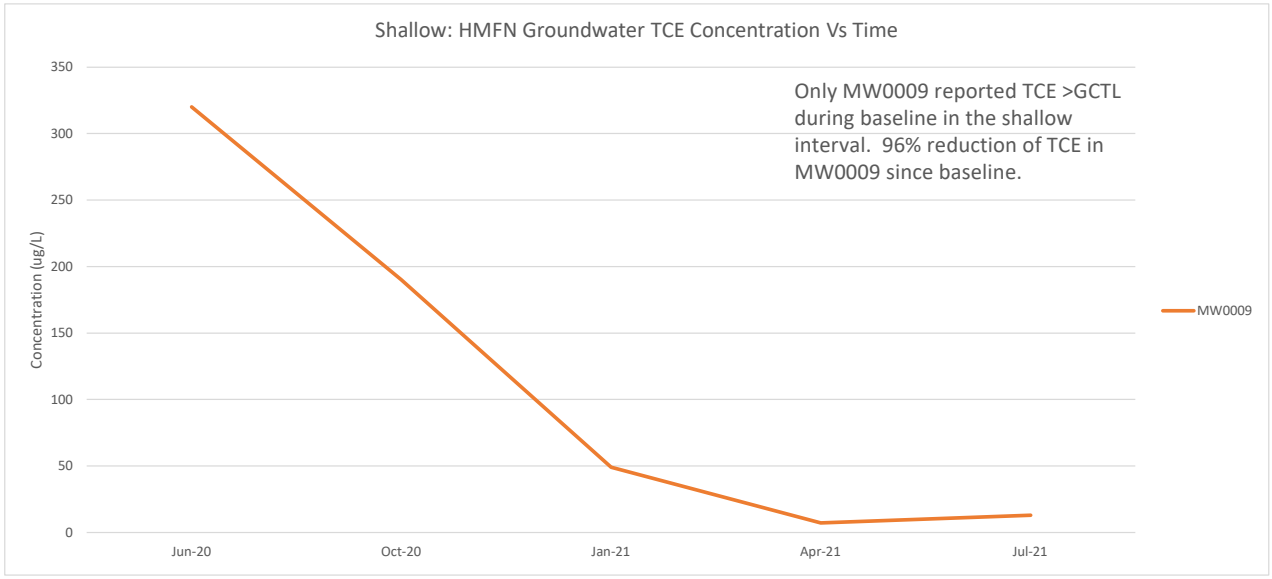
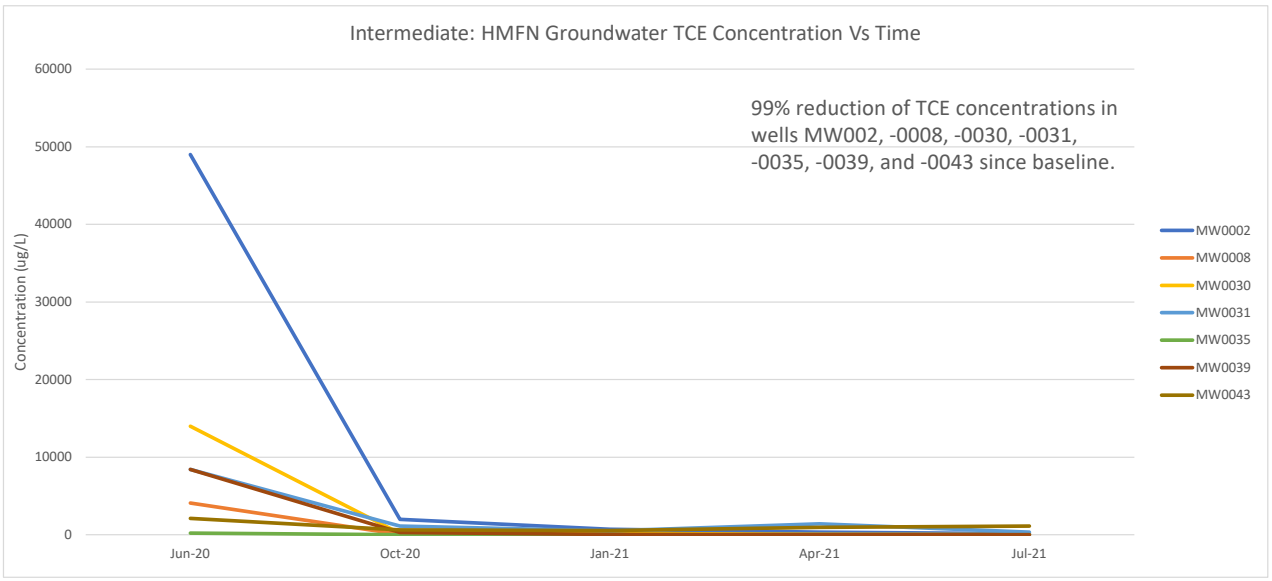
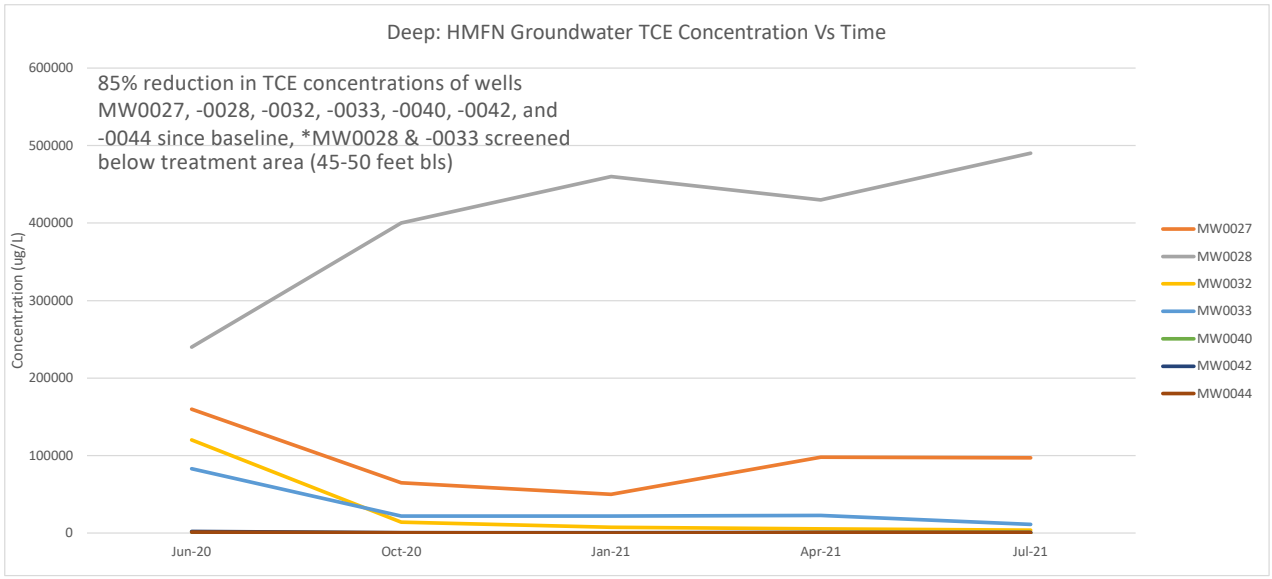
Figure 5-17. TCE Trend Analysis



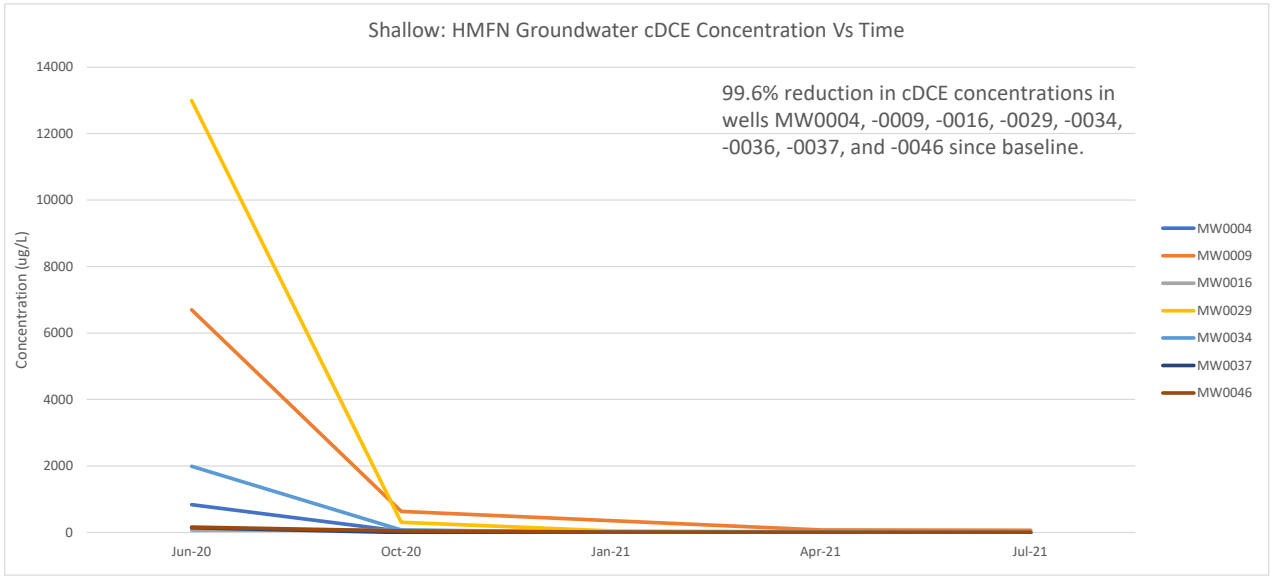


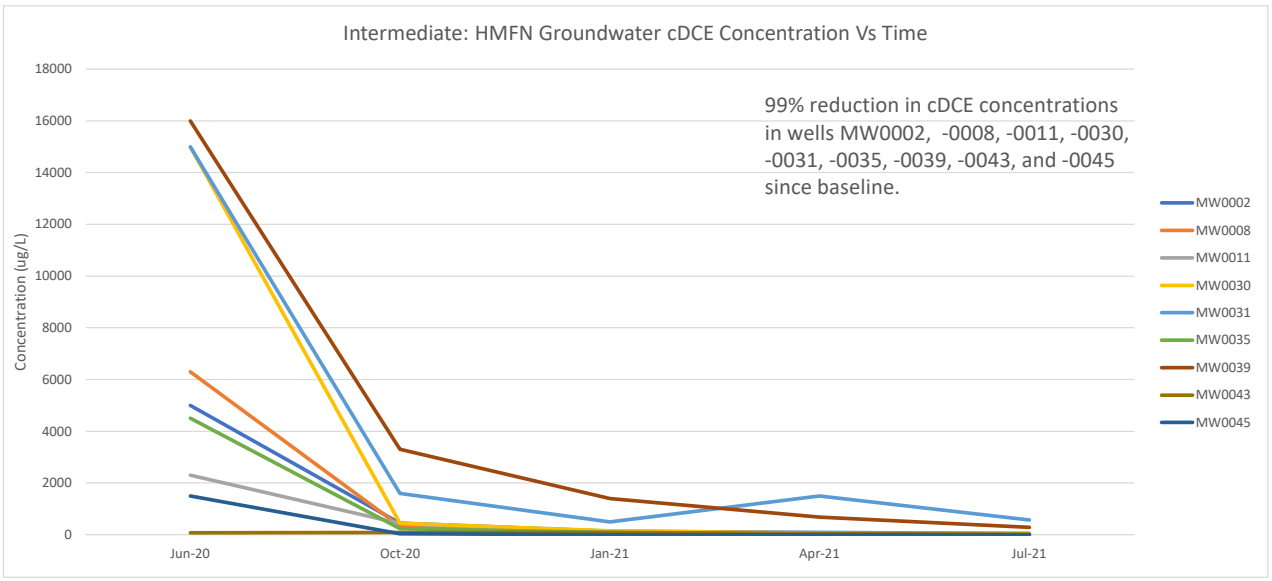


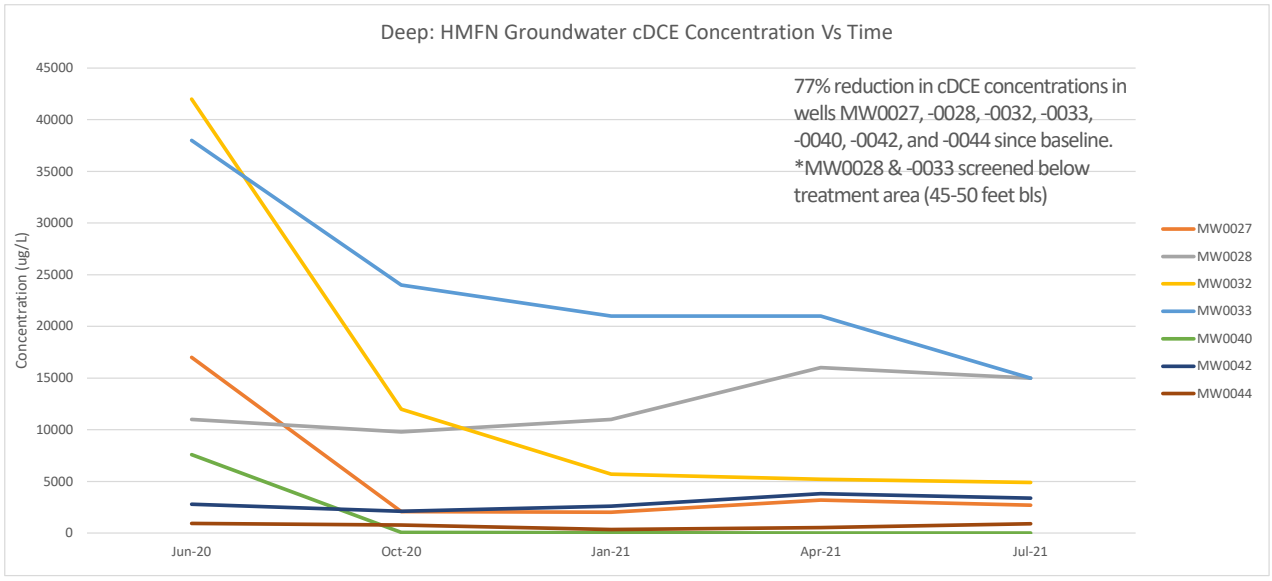
97.1% reduction in TCE concentrations of plume centerline wells for all three intervals since baseline.

Baseline sampling conducted in June 2020. System start-up completed in August 2020.

Figure 5-18. cDCE Trend Analysis



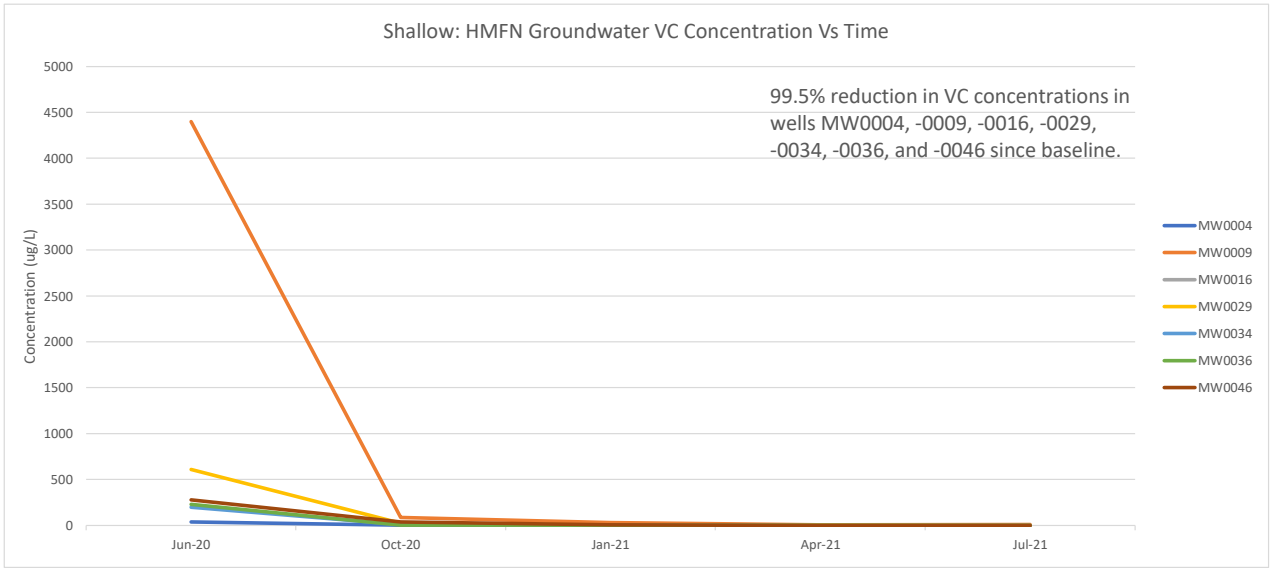


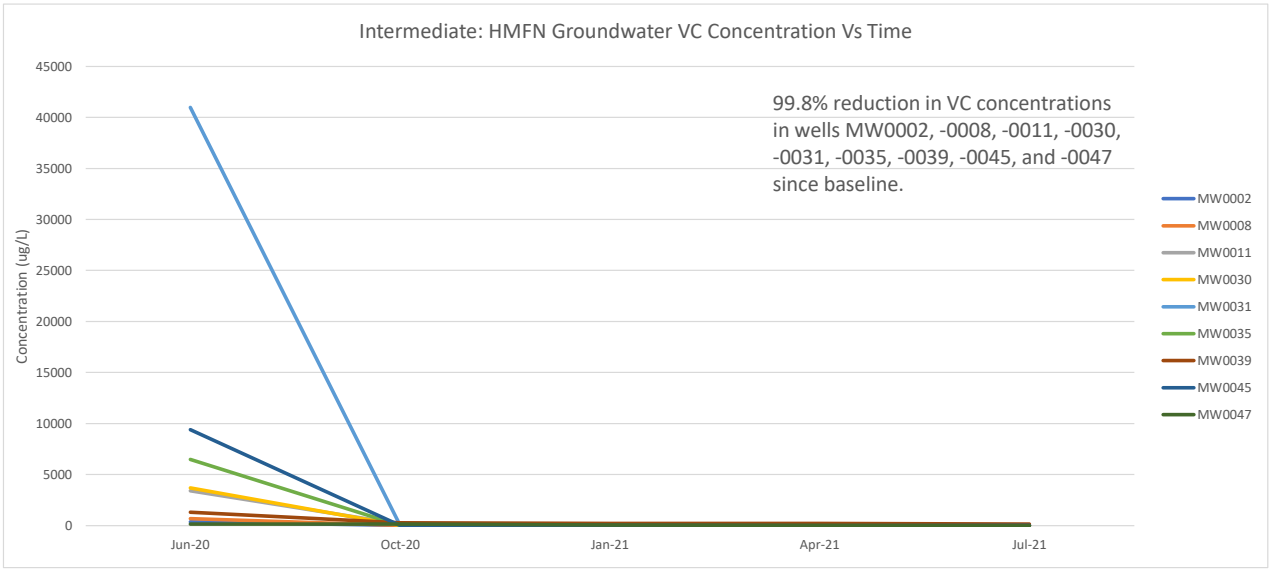


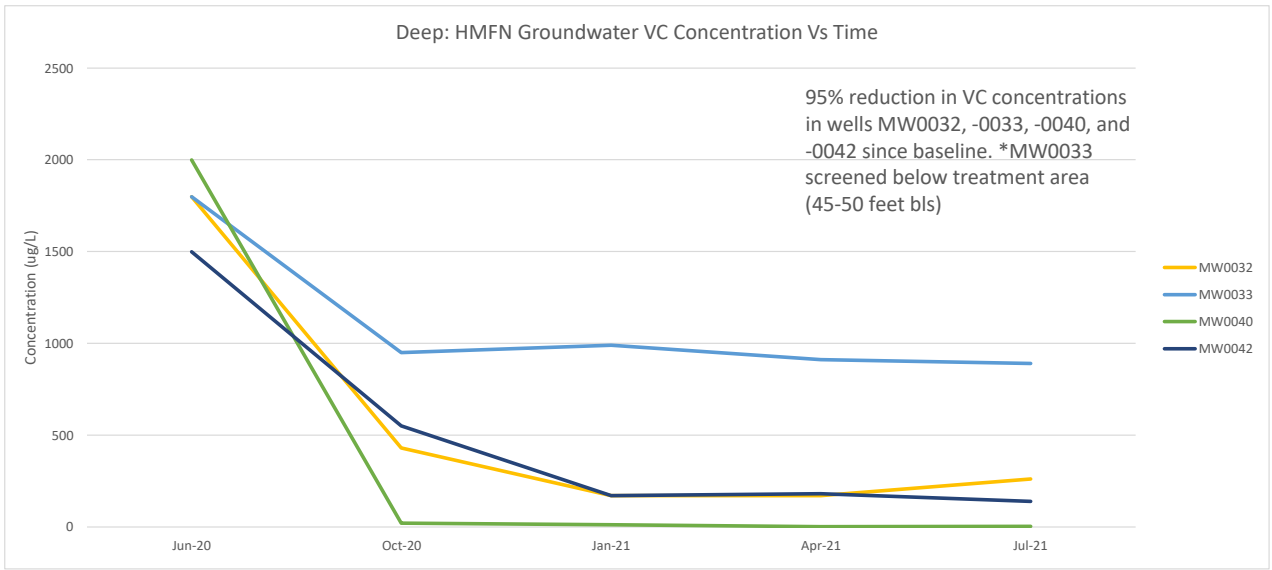
98.4% reduction in cDCE concentrations of plume centerline wells for all three intervals since baseline.

Baseline sampling conducted in June 2020. System start-up completed in August 2020.

Figure 5-19. VC Trend Analysis







99.5% reduction in VC concentrations of plume centerline wells for all three intervals since baseline.

Baseline sampling conducted in June 2020. System start-up completed in August 2020.

SECTION VI
CONCLUSIONS AND RECOMMENDATIONS

Installation and operation of the HMFN AS IM was completed in accordance with the IMWP (NASA, 2017a) and IWP (NASA, 2019b). The AS system was installed between December 2019 and August 2020, and includes a total of 213 AS wells with screens ranging from 25 feet to 45 feet bls. System start-up was achieved in August 2020, with baseline sampling completed in June 2020. Year 1 performance monitoring activities were conducted on a quarterly schedule in October 2020, January 2021, April 2021, and July 2021. Air sampling was also conducted as part of performance monitoring for health and safety monitoring, as well as to verify compliance with the KSC Title V Air Operation Permit.

Based on Year 1 system operation and performance monitoring results, the AS system at HMFN is operating as designed and meeting performance criteria. The pulse cycles are operating and functioning properly, with the AS wells operating at the designed flowrate of 5 cfm/well and pressures of 15.0, 18.3, and 26.8 psig at the shallow, shallow-intermediate, and intermediate depths, respectively. The overall runtime of the AS system for the Year 1 reporting period (August 2020 to August 2021) was approximately 82%, with downtime attributed to groundwater sampling activities and system maintenance.

Performance monitoring results indicate that within the first year of operation, TCE concentrations in groundwater in plume centerline wells across all depth zones have been reduced by more than 97%. Similarly, cDCE and VC concentrations of plume centerline monitoring wells across the entire saturated treatment area have been reduced by 98% and more than 99%, respectively. As of July 2021, concentrations exceed GCTLs in groundwater at 20 of the 28 performance monitoring wells and exceed NADCs in groundwater at 8 of the 28 monitoring wells. Continued operation of the AS system is required to meet the IM objective to reduce COC groundwater concentrations to less than applicable NADCs.

The contents of this report were presented during the January 2022 KSCRT meeting, which included recommendations for continued OM&M, performance monitoring, and future activities.

During that meeting, Team consensus was reached to continue with Year 2 AS system OM&M for HMFN, with the following modifications:

- Continue to operate the AS system throughout Year 2, but Zone 1 operations will be discontinued. Operation of Zone 1, which includes 17 AS wells screened from 25 to 32 feet bls in the western portion of the AS well network, is no longer required based on Year 1 performance monitoring results which indicated VOC concentrations have been reduced to less than NADCs in MW0004 and MW0016.

Based on Year 1 performance monitoring results, a reduced Year 2 monitoring program is recommended, as follows:

- Remove MW0035 and MW0036 from the performance monitoring program. These two monitoring wells will be discontinued based on all VOCs measuring below GCTLs during the last two quarterly sampling events.
- Reduce sampling frequency of MW0046 and MW0047 from quarterly to annual based on two consecutive rounds of sampling results below GCTLs. Annual sampling will continue at these wells to monitor the observed groundwater flow direction reversal away from the borrow pond towards these two wells.
- Reduce sampling frequency at the remaining 24 performance monitoring wells (MW0002, MW0004, MW0008, MW0009, MW0011, MW0016, MW0024, MW0027, MW0028, MW0029, MW0030, MW0031, MW0032, MW0033, MW0034, MW0037, MW0038, MW0039, MW0040, MW0041, MW0042, MW0043, MW0044, and MW0045) from quarterly to semi-annual as outlined in the December 2019 IWP.

Table 6-1 provides the Year 2 performance monitoring recommendations. The performance monitoring well locations and sampling frequency for Year 2 is provided on Figure 6-1.

Additional recommendations for HMFN include:

- Reduce air sampling to one annual ambient air sampling event during the Year 2 reporting period. This is based on no OSHA PEL or ACGIH TLV exceedances detected

during any Year 1 air monitoring sampling events. Air sampling will be conducted at the same two locations sampled during Year 1 (HMFN-VMP01 and HMFN-VMP02 – see Figure 6-1).

- Conduct a future DPT groundwater sampling investigation to assess system progress and contaminant conditions below the AS treatment volume. The results will be presented to KSCRT at a future meeting with recommendations for additional monitoring wells, if needed.
- Following the AS IM, NASA will re-visit plans for potentially utilizing another remedial technology to treat contamination in the deep source zone. This will be presented at a future KSCRT meeting.

The above recommendations for HMFN were presented at the January 2022 KSCRT Meeting, and Team consensus was reached on the recommended path forward (Meeting Minute 2201-M03, Decision D01). The January 2022 KSCRT Meeting Minutes are included in Appendix H.

Table 6-1. Year 2 Performance Monitoring Plan

Montoring Well	Screen Interval	Monitoring Function	Year 2 Sampling Schedule	
(HMFN-)	(ft bls)		Semi-Annual	Annual
MW0002	[30-40]	Within SZ and centerline of the plume (HS1).	**X**	--
MW0004	[5-15]	Within VOC NADC impacted area and centerline of the plume (HS1).	**X**	--
MW0008	[20-30]	Within VOC 100xNADC impacted area and centerline of the plume (HS1).	**X**	--
MW0009	[5-15]	Within shallow interval of 10xNADC impacted area.	**X**	--
MW0011	[20-30]	Within CVOC 10xNADC impacted area.	**X**	--
MW0016	[5-15]	Provides horizontal delineation of plume to the west.	**X**	--
MW0024	[55-65]	Within HS SZ.	**X**	--
MW0027	[40-45]	Within HS SZ.	**X**	--
MW0028	[45-50]	Within HS SZ.	**X**	--
MW0029	[10-20]	Within HS1 SZ and centerline of the plume.	**X**	--
MW0030	[20-30]	Within HS1 SZ and centerline of the plume.	**X**	--
MW0031	[30-40]	Within HS1 SZ and centerline of the plume.	**X**	--
MW0032	[40-45]	Within HS1 SZ and centerline of the plume.	**X**	--
MW0033	[45-50]	Within HS1 SZ and centerline of the plume.	**X**	--
MW0034	[10-20]	Within 100xNADC impacted area centerline of the plume (HS1).	**X**	--
MW0035	[30-40]	(Monitoring discontinued at MW0035 based on all COCs less than GCTLs for last two quarterly monitoring events)	(Discontinued)	
MW0036	[10-20]	(Monitoring discontinued at MW0036 based on all COCs less than GCTLs for last two quarterly monitoring events)	(Discontinued)	
MW0037	[5-15]	Within 10xNADC impacted area centerline of the plume (HS1).	**X**	--
MW0038	[15-25]	Within 10xNADC impacted area centerline of the plume (HS1).	**X**	--
MW0039	[30-40]	Within 10xNADC impacted area (HS2).	**X**	--
MW0040	[40-45]	Within 10xNADC impacted area (HS2).	**X**	--
MW0041	[30-40]	Within 10xNADC impacted area (HS2).	**X**	--
MW0042	[40-45]	Within 10xNADC impacted area (HS2).	**X**	--
MW0043	[30-40]	Within 10xNADC impacted area (HS2).	**X**	--
MW0044	[30-40]	Within 10xNADC impacted area (HS2).	**X**	--
MW0045	[25-35]	Within Hot Spot 1 Source Zone (HS1).	**X**	--
MW0046	[10-20]	Within 100xNADC impacted area (HS1).	--	**X**
MW0047	[20-30]	Within 100xNADC impacted area (HS1).	--	**X**

Notes:
ft bls = feet below land surface.
HCP = High Concentration Plume.
HS = Hot Spot.
NADC = Natural Attenuation Default Concentrations.
SZ = Source Zone.
X = Sample will be collected for VOCs via EPA method 8260B
*Semi-annual events are anticipated to be conducted in October 2021 and April 2022, with annual event in April 2022.

APPENDIX B

AIR SPARGE SYSTEM INSTALLATION PERMITS AND FORMS

AVOID VERBAL ORDERS

DATE: November 7, 2019
APPROVAL VALID UNTIL: November 7, 2021

TO:	**Ryan O'meara, SIE20**
TITLE:	**Air Sparging Treatment System and Monitoring Wells at Hypergol Maintenance Facility North**
SITE PLAN:	19-0077 (M7-10026096)
SUBJECT:	**Site Plan Approval**

This letter indicates that the proposed site plan has met with the approval of the Master Planning Office. As an approved site plan, it will remain valid for a period of ***TWO (2) years***. If the project has not been initiated within this two-year period, this approval will be rescinded and you must re-submit your plan for review. Within this approval package, you will find a copy of the maps, site plan, and comment log. The comment log contains comments and concerns regarding this site plan. Please note that your final plan must comply with all conditions and restrictions contained within the approval package. This letter signifies approval by the Master Planning Office only and does not entitle you to funds of facilities that may be necessary to fulfill this project. It is your responsibility to obtain the necessary funds and materials, as well as a Utility Locate/Excavation Permit to complete this project.

Conditions/Restrictions must be met:
- Beware of GN2 pipeline crossing the area. Obtain an Excavation Permit so there will be a utility locator to identify entire pipeline crossing route. Do not place wells within 15 feet of the pipeline centerline.

1. PROJECT INFORMATION

Project Title: Interim Measure Activities at the Hypergol Maintenance Facility North

Project Lead: Ryan O'Meara, SI-E2, 321-861-7719 **Project No.:** HMF_IM_8-26-2019

Project Description:

Activities at the site include monitoring well (MW) and air sparge (AS) system installation to monitor and remediate groundwater at Hypergol Maintenance Facility North. The attached Figures, A-1 and A-2 (attached to checklist) show the site location and facility layout, respectively. MW installation will be completed to a maximum depth of 60 feet below land surface (bls) in the locations identified on the attached monitoring well location map. Installation of the AS system will involve trenching, infrastructure installation (AS trailer, compressed air piping and electrical), and drilling in the general locations shown on the attached Proposed Air Sparge Piping Layout. Trenching will be conducted to a maximum depth of 3.0 feet below land surface (bls) and drilling of AS wells will occur to a max depth of 60 feet bls. The additional monitoring wells will support the existing well schematic in tracking remediation progress. The AS system will remain in-place until the remediation goals are achieved.

EPB Reviewer: LPH **Facility No.:** HMF North, M7-1011, M7-0961

2. NEPA DETERMINATIONS

- ☑ **a. Categorical Exclusions per 14 CFR Part 1216.304(d)**
- ☐ **b. Environmental Assessment (EA) Required**
- ☐ **c. Environmental Impact Statement (EIS) Required**
- ☐ **d. Existing FONSI or ROD**
- ☐ **e. Centerwide EIS**
- ☐ **f. AF Project on KSC/813**
- ☐ **g. NASA Project on CCAFS/813**

3. ENVIRONMENTAL REQUIREMENTS

a. Non-Permit Requirements	☑ **YES**	☐ **NO**
b. Permit Requirements	☑ **YES**	☐ **NO**

2.a.1. CATEGORICAL EXCLUSION (CATEX): This project is categorically excluded (CATEX) from further NEPA review as defined in 14 CFR 1216.304(d)(2)(i) Routine maintenance, minor construction or rehabilitation, minor demolition, minor modification, minor repair, and continuing or altered operations at, or of, existing NASA or NASA-funded or -approved facilities and equipment, such as buildings, roads, grounds, utilities, communication systems, and ground support systems, such as space tracking and data systems. For additional information, please contact Don Dankert of the NASA Environmental Management Branch (SI-E3, 321-861-1196).

3.a.1. SOLID WASTE MANAGEMENT UNIT (SWMU): This project includes work within the boundary of SWMU #90 HMF North (M7-0961) by the KSC Remediation Group to monitor and remediate groundwater contamination beneath and around former facility M7-0961. Handle soils and groundwater in accordance with site work plan. Utilize personal protective equipment (PPE) as required by the Health and Safety Plan. Contact the Remediation Project Manager (RPM) Ryan O'Meara (SI-E2, 861-7719) for guidance regarding handling of soil and groundwater at this location.

3.a.2. MANHOLE DEWATERING POTENTIAL RELEASE LOCATION (PRL): This project includes work within the boundary of PRL 204, Manhole Dewatering Operations. There is an institutional control being implemented on the soil within a 25 ft radius of manholes on KSC. The soil adjacent to telecommunications and electrical manholes is contaminated with barium, copper, lead and polynuclear aromatic hydrocarbons. The maximum concentrations found

are barium at 410 mg/kg, copper at 440 mg/kg, lead at 4,900 mg/kg and B(a)P Equivalent at 35.4 mg/kg. If handling the soil (excavation or any other activity in which the soil is disturbed and handled by workers) within 25 ft of a manhole, contact your company's Safety and Health Office for recommendations on appropriate personal protective equipment (PPE). All soil being disturbed within 25 ft of the manhole being dewatered must remain within that 25 ft radius. If this is not possible the soil must be properly disposed. All efforts should be made to cause the dewatered effluent to be discharged in a sheet flow along grade and not be allowed to scour the soil at the discharge point. Erosion protection will be provided as needed and applicable to prevent the disturbance/erosion of soil due to construction activities and dewatering near manholes. For more information, or if soil must be disturbed, please contact Mike Deliz (SI-E2, 867-6971) to discuss control/disposal options.

3.a.3. HAZARDOUS/NON-HAZARDOUS WASTE: All hazardous and non-hazardous wastes generated during the interim measure must be properly containerized, stored, labeled, manifested, shipped, and disposed of in full regulatory compliance. Hazardous wastes generated by this activity must be manifested, shipped, and disposed of under either the remediation contractor's or NASA's Environmental Protection Agency (EPA) identification number. The contractor shall maintain copies of waste management records and manifests onsite and make them available for review by NASA upon request.

If wastes are managed, controlled and disposed of using the NASA EPA identification number, the KSC Waste Management requirements outlined in KNPR 8500.1 must be followed. A Process Waste Questionnaire (PWQ), KSC Form 26-551 along with any supporting documentation (MSDS, product formulation, lab analyses) must be submitted to the KEMCON Waste Management Office for each waste stream generated. That office will then generate a Technical Response Package (TRP) which will give direction on proper handling, storage, and disposal of the waste stream. Please contact KEMCON Waste Management Services at 867-8640 if assistance is required.

The remediation contractor is responsible for any spills, releases, or other environmental contamination that occurs as a result of the proposed activities. A KSC Pollution Incident Report (PIR) Form (KSC Form 21-555) must be completed and submitted to the NASA Environmental Assurance Branch within three (3) calendar days of the incident.

3.a.4. THREATENED AND ENDANGERED SPECIES: This project has the potential to affect protected and/or threatened and endangered species; which may include the Eastern indigo snake, and gopher tortoise. Measures must be taken to minimize impacts to their habitat. A biological survey will be required to identify potential impacts prior to disturbances. If vegetation clearing or any disturbance of vegetated areas is necessary, a biological survey will be required to identify potential impacts to habitat and wetlands prior to disturbances. Prior to the biological survey, the vegetation to be trimmed must be clearly marked with lines, flags or stakes showing limits of proposed clearing. To schedule a biological survey, contact Becky Bolt (IMSS-200, 867-7330) 2 weeks prior to site work.

3.a.5. EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES (BMPs): Precautions must be made to eliminate or reduce to the greatest extent possible any discharge of sediments outside established project boundaries. This can be accomplished by initiating proactive erosion control BMPs. Installation and maintenance of appropriate erosion/sediment control devices (such as wattles, turbidity screens, silt fences, inlet protectors, floating turbidity booms, etc.) must be completed prior to initial land disturbance where the possibility of sediment discharge could impact surrounding stormwater conveyances and other surface waters. The BMPs must be maintained so they remain functional until such time that the newly exposed soils are stabilized with sod or natural vegetation.

3.a.6. CONCRETE WASHOUT: Water used to rinse out concrete trucks and other equipment used for concrete work must not be allowed to discharge to surface waters. Concrete washout water shall be diverted to a settling pond where suspended material will settle out and the water can percolate into the ground. Contact Doug Durham (SI-E2,

867-8429) with any question on this requirement. Remove and dispose of hardened concrete waste consistent with your handling of other construction wastes. After drying/settling, the residue may be disposed of at the Diverted Aggregate Reclamation and Collection Yard (DARCY); and the ground restored. Clean, unstained, unpainted concrete residue is accepted at the DARCY without any sampling and analysis. Contact Zach Hall (SI-E2, 867-5178) with any questions on this requirement.

3.a.7. GREEN PURCHASING/SUSTAINABLE ACQUISITION: Federal agencies and their contractors are required to purchase products made from recycled or recovered materials and other environmentally preferable products whenever possible. The Green Compilation Tool found at https://sftool.gov/greenprocurement provides information and useful links and tools to identify applicable green/sustainable acquisition requirements for products and services (Ref. FAR subpart 23.1 and NPR 8530.1).A Request for Waiver Form (KSC 28-825 NS) must be submitted when a product or service meets the green/sustainable requirements but is not procured. Please contact Annie Williams (SI-E3, 867-8720) with any questions on this requirement.

3.b.1. EXCAVATION PERMIT: A KSC Excavation Permit will be required for any digging proposed by this project. Please contact the Utility Locate/Excavation Permit Request Customer Helpline at 867-2406 or go to website at http://epr.ksc.nasa.gov/Home/ for an underground utility scan and dig permit. NOTE: If a trench or pit is to be left open all day or overnight, the trench/pit must be checked for trapped animals at the beginning and end of each work shift. If an animal is observed trapped, contact Becky Bolt (IMSS-200, 867-7330) or the Duty Office (861-5050, email KSC-ISC-DutyOffice@mail.nasa.gov) to arrange removal/release. Do not handle the animal(s).

3.b.2. FDEP NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) CONSTRUCTION ACTIVITY PERMIT: This project may require an NPDES Phase II construction permit. If 1 acre or more of land will be disturbed, a NPDES Construction Activity Permit from the Florida Department of Environmental Protection (FDEP) is required under F.A.C. 62-621.300(4), Notice of Intent to Use Generic Permit for Stormwater Discharge from Large (If over 5 Acres) and Small (1 Acre To 5 Acres) Construction Activities. http://www.dep.state.fl.us/water/stormwater/npdes/forms/cgp_noi.pdf.

This includes construction activity which will disturb less than one acre of land area that is part of a larger common plan of development that will ultimately disturb equal to or greater than one acre of land. Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the site. A condition of this permit is to provide a Stormwater Pollution Prevention Plan (SWPPP) detailing erosion and turbidity controls for the site. Information on completing the permit application and development of the SWPPP can be obtained by contacting Doug Durham (SI-E2, 867-8429).

3.b.3. ENVIRONMENTAL RESOURCE PERMIT (ERP) and ACOE Permit: Wetland permits from the St. Johns River Water Management District (SJRWMD) and US Army Corp of Engineers (ACOE) may be required for the proposed development of Roberts Road. The project proponent shall prepare all permit applications and pay any application fees. Application forms with supporting material such as maps and engineering drawings must be submitted to the EAB (Doug Durham, SI-E2, 867-8429) for review and NASA signature. An electronic version in PDF format should also be provided. No work can be performed until the permit process is completed.

3.b.4. AIR EMISSIONS: NASA/KSC has Remedial Activities listed on the Title V Air Permit as an insignificant activity. The proposed groundwater remediation system would be considered insignificant if the Remediation system/unit/activity would not emit or have the potential to emit (PTE):

a. 500 pounds per year or more of lead and lead components expressed as lead;

b. 1,000 pounds per year or more of any hazardous air pollutant;

c. 2,500 pounds per year or more of total hazardous air pollutants; or

d. 5.0 tons per year or more of any other regulated pollutant, Per Rule 62-213.430(6), F.A.C.

If the above criteria cannot be met, a construction permit would be required. Contact the Environmental Assurance Branch (Zach Hall, SI-E2, 867-5178) if you have any questions.

Avoid Verbal Orders

TO: SI-E2/Ryan O'Meara **DATE: 08/26/2019**

FROM: SI-E3/Environmental Management Branch

SUBJECT: KSC Record of Environmental Consideration (REC) **REC #: 10773**

3.b.5. WATER WELL: Installation or abandonment of a water well requires use of a licensed contractor, a KSC dig permit, and registration of the well with St. Johns River Water Management District (SJRWMD). Contact Doug Durham (SI-E2, 867-8429) for details.

No other environmental issues were identified based upon the information provided in the KSC Environmental Checklist. This Record of Environmental Consideration (REC) does not relinquish the project lead from obtaining and complying with any other internal NASA permits or directives necessary to ensure all organizations potentially impacted by this project are notified and concur with the proposed project.

Due to potential changes in regulations, permit requirements and environmental conditions, statements in this REC are valid for 6 months, and subject to review after this period. It is the responsibility of the project lead to submit current project information for a REC update prior to project commencement if REC is older than 6 months; and also to notify the Environmental Management Branch (SI-E3) if the scope of the project changes at any time after the REC is issued.

R. O'Meara/SI-E2
cc:
C. Hook/Tetra Tech, Inc.
A. Murphy/Tetra Tech, Inc.
M. Jonnet/Tetra Tech, Inc.
B. Bolt/IMSS-200

4. Upon evaluation of the subject project, the above determinations have been made and identified. Contact the Environmental Management Branch (SI-E3) at 861-1196 for re-evaluation should there be any modifications to the scope of work.

James Brooks

WELL CONSTRUCTION PERMIT

Permit Number: 53799

Application Date: 12/5/2019
Expiration Date: 12/5/2020
Permit Fee: $100.00

Purpose: MONITORING WELL: (2) OR MORE ON ONE SITE/FACILITY
Township/Range/Section: 23 - 37 - 04
Subdivision/Lot #: 10 WELLS
Well Site Address: 5TH STREET & G AVENUE E
KENNEDY SPACE CENTER, FL

Companion Permit Type / Number: 53797 - 53-799

Well Contractor: GROUNDWATER PROTECTION, HINST **WWC #:** 9311
WWC Phone #: 407-426-7885
Owner Name: UNITED STATES GOVERNMENT
Owner Phone:

Issuance of this permit does not relieve the well owner of meeting the permit requirements of county, municipal, or other legally constituted authorities. The well contractor must meet the well set-back per Chapter 62-532, F.A.C., Table 1. Any variance from these setbacks or change to site plan must be approved in advance by Environmental Health Services.

WELL CONSTRUCTION PERMIT

Permit Number: 53797

Application Date: 12/5/2019
Expiration Date: 12/5/2020
Permit Fee: $100.00

Purpose: MONITORING WELL: (2) OR MORE ON ONE SITE/FACILITY
Township/Range/Section: 23 - 37 - 04
Subdivision/Lot #: 2 WELLS
Well Site Address: 5TH STREET & G AVENUE E
KENNEDY SPACE CENTER, FL

Companion Permit Type / Number: 53797-53799

Well Contractor: GROUNDWATER PROTECTION, HINST **WWC #:** 9311
WWC Phone #: 407-426-7885
Owner Name: UNITED STATES GOVERNMENT
Owner Phone:

Issuance of this permit does not relieve the well owner of meeting the permit requirements of county, municipal, or other legally constituted authorities. The well contractor must meet the well set-back per Chapter 62-532, F.A.C., Table 1. Any variance from these setbacks or change to site plan must be approved in advance by Environmental Health Services.

WELL CONSTRUCTION PERMIT

Permit Number: 53798

Application Date: 12/5/2019
Expiration Date: 12/5/2020
Permit Fee: $50.00

Purpose: MONITORING WELL: (1)
Township/Range/Section: 23 - 37 - 04
Subdivision/Lot #: 9 WELLS
Well Site Address: 5TH STREET & G AVENUE E
KENNEDY SPACE CENTER, FL

Companion Permit Type / Number: 53797 - 53799

Well Contractor: GROUNDWATER PROTECTION, HINST **WWC #:** 9311
WWC Phone #: 407-426-7885
Owner Name: UNITED STATES GOVERNMENT
Owner Phone:

Issuance of this permit does not relieve the well owner of meeting the permit requirements of county, municipal, or other legally constituted authorities. The well contractor must meet the well set-back per Chapter 62-532, F.A.C., Table 1. Any variance from these setbacks or change to site plan must be approved in advance by Environmental Health Services.

GPR SURVEY REPORT

FINAL REPORT
GEOPHYSICAL INVESTIGATION
HMF NORTH SITE
MERRITT ISLAND, FL

Prepared for Tetra Tech, Inc.
Pittsburgh, PA

Prepared by GeoView, Inc.
St. Petersburg, FL

November 26, 2019

Mr. Christopher Hook, P.E.
Tetra Tech, Inc.
661 Anderson Drive, Suite 200
Pittsburgh, PA 15220

Subject: Transmittal of Final Report for Geophysical Investigation
HMF North Site - Merritt Island, FL
GeoView Project Number 30625

Dear Mr. Hook,

GeoView, Inc. (GeoView) is pleased to submit the final report that summarizes and presents the results of the geophysical investigation conducted at the HMF North Site in Merritt Island, Fl. The purpose of the geophysical investigation was to determine the presence and location of underground utilities within the designated area of the project site. GeoView appreciates the opportunity to have assisted you on this project. If you have any questions or comments about the report, please contact us.

GEOVIEW, INC.

Introduction

A geophysical investigation was conducted at the HMF North Site located near the intersection of Fifth Street SE and G Avenue SE in Merritt Island, FL. The location of the survey area is provided on Figure 1. The investigation was conducted in the accessible areas of the designated portions of the project site. The purpose of the investigation was to help identify underground utilities within the survey area.

Description of Geophysical Investigation

The geophysical investigation was conducted using ground penetrating radar (GPR) and electronic utility locate (EUL) equipment. The EUL was used to identify any underground utilities that were either carrying electrical power or could be energized by an induced electrical current. The GPR was used to help identify both electrical and non-electrical underground utilities within the survey area.

A combination of two geophysical methods was used for the site investigation. The two selected methods are complementary, in that, the EUL can accurately and rapidly detect many types of underground utilities. GPR, which is slower, can then be used to confirm the results of the EUL survey and to identify other underground utilities that are non-detectible by the EUL. It is typically possible to evaluate the burial depth of the underground utilities using both methods. A description of the geophysical methods is provided as Appendix 1.

Survey Results

Results of the geophysical investigation are provided in Figure 1. The locations of the identified utilities were recorded using a Trimble Geo7x Global Positioning System (GPS) with a horizontal accuracy of 1 to 3 ft.

The estimated depths of the underground utilities (in feet below land surface [bls]) are provided. In general the estimated depths of the underground utilities are accurate to within a tolerance of +/- 25 percent. Plan view positions are usually accurate to within +/- 1-foot. If determinable, the type of underground utility is also indicated. The location of the underground utilities was also indicated on the ground surface using spray paint and/or wire pin flags. GeoView uses the American Public Works Association (APWA) uniform color codes for temporary marking of underground utilities which is as follows:

- Power / Electric (both active and inactive): red
- Communications: orange

- Gas: yellow (black with yellow outline in figures)
- Water: blue
- Nitrogen line: purple
- Unknown: pink (magenta in figures)

Limitations

The ability to collect interpretable information at a project site using the GPR and EUL methods is limited by the physical properties of both the underground soils and the underground utilities. Specific to the GPR, the depth of penetration of the GPR signal limited by the attenuation (absorption) of the GPR signal within subsurface soil materials. Once the GPR signal has been attenuated at a particular depth, information regarding deeper features will not be obtained. The ability of GPR to resolve a particular utility is a function of the contrast in dielectric constants (conductivity) between the particular utility and the surrounding soils. The larger the contrast the more easily the pipe can be resolved by the GPR. For example, the difference in dielectric constants between sand and a PVC or ceramic pipe is relatively small in comparison to the difference between sand and a steel pipe. Accordingly, when using GPR, a PVC pipe is more difficult (and sometimes impossible) to resolve in comparison to a steel pipe.

The ability of GPR to resolve a utility is also controlled by the utilities size and depth. In general, GPR loses 0.5 to 1 inch of resolution per foot of burial. For example, it would not be possible to resolve a 2-inch diameter pipe at a depth greater than 2 to 4 ft.

Utilities can be identified using the EUL method in both the passive and active mode. In the passive mode, the EUL detects underground utilities that are energized by a 60 Hertz current. These utilities can be either actively carrying an electrical current or may be non-electrical metallic utilities that have been energized by a nearby electrical utility. It is because of this energizing that a particular utility may be incorrectly identified as an electrical utility. For the EUL equipment to identify an electrical utility in the passive mode, the utility must be carrying a sufficient amperage (load). If the load on a particular utility is low or zero then it will not be possible to identify the utility in this mode.

In the active mode, the EUL is directly connected to the particular utility and an energizing current is induced. This method only works when the utility is metallic, if a particular utility changes from a metallic to non-metallic then the EUL will not be able to identify the utility beyond the point of that transition. Some non-metallic pipelines, such as gas pipelines, have metallic trace wires

emplaced along the pipeline. If this wire is broken or corroded then it will not be possible to locate the utility beyond that point.

It is noted that underground utilities at the project site were identified using GPR and EUL methods only. Physical probing or other visual confirmation for the presence and/or identification of the suspected underground utilities was not performed. The identification of the utilities was based solely on above-ground observations; e.g., proximity to water valves and by observations made into manholes and vaults.

The results of the GeoView investigation are limited by the capabilities of the GPR and EUL methods at the project site. GeoView can make no warranties or representations of subsurface conditions beyond the capabilities of the geophysical methods. Results of this investigation should be used only to help anticipate where, what type and approximate depth of the underground utilities that will be encountered during demolition activities at the project site. All standard operating procedures typically employed for utility-removal projects should be followed.

Appendix 1
Description of Geophysical Methods

Ground Penetrating Radar

Ground Penetrating Radar (GPR) consists of a set of integrated electronic components which transmits high frequency (250 to 1,000 megahertz [MHz]) electromagnetic waves into the ground and records the energy reflected back to the ground surface. The GPR system consists of an antenna, which serves as both a transmitter and receiver, and a profiling recorder that both processes the incoming signal and provides a graphic display of the data. The GPR data can be reviewed real time on the system's computer screen or recorded on the hard drive for later review. GeoView uses a Mala GPR system. Underground utility surveys are typically conducted using either a 500 or 250 MHz antenna.

A GPR survey provides a graphic cross-sectional view of subsurface conditions. This cross-sectional view is created from the reflections of repetitive short-duration electromagnetic (EM) waves which are generated as the antenna is pulled across the ground surface. The reflections occur at the subsurface contacts between materials with differing electrical properties. The electrical property contrast that causes the reflections is the dielectric permittivity which is directly related to conductivity of a material. The GPR method is commonly used to identify such targets as underground utilities, underground storage tanks or drums, buried debris, voids or geological features.

The greater the electrical contrast between the surrounding earth materials and target of interest, the greater the amplitude of the reflected return signal. Unless the buried object is metal, only part of the signal energy will be reflected back to the antenna with the remaining portion of the signal continuing to propagate downward to be reflected by deeper features. If there is little or no electrical contrast between the target interest and surrounding earth materials it will be very difficult if not impossible to identify the object using GPR. A typical target difficult to identify during a GPR survey would be a water-filled PVC pipe buried below the water table.

The depth of penetration of the GPR signal is very site specific and is controlled by two primary factors: subsurface soil conditions and selected antenna frequency. The GPR signal is attenuated (absorbed) as is passes through earth materials. As the energy of the GPR signal is diminished due to attenuation, the energy of the reflected waves is reduced, eventually to the level that they can no longer be resolved by the GPR system. The more conductive the earth materials,

the greater the GPR signal attenuation, hence a reduction in signal penetration depth. In Florida, the typical soil conditions which severely limit GPR signal penetration are near-surface clay and organic materials.

The depth of penetration of the GPR signal is also reduced as the antenna frequency is increased. However, as antenna frequency is increased the resolution of the GPR data is improved. Therefore, when designing a GPR survey a tradeoff is made between the required depth of penetration and desired resolution of the data. As a rule, the highest frequency antenna that will still provide the desired maximum depth of penetration should be used.

A GPR survey is conducted along survey lines (transects) which are measured paths along which the GPR antenna is moved. Electronic marks are placed in the data by the operator at designated points along the GPR transects. These marks allow for a correlation between the GPR data and the position of the GPR antenna on the ground.

For underground utility surveys, the GPR investigation is conducted along a set of perpendicularly orientated transects. The survey is conducted in two directions because the definitive GPR signal response associated with an underground utility is only obtained when the GPR antenna is passed perpendicular to the long axis of the utility. Spacing between the transects typically ranges from 2.5 to 20 feet depending upon the complexity of the configuration of the underground utilities. The location of the underground utilities is typically painted on the ground surface and/or provided on a scaled map.

To determine the depth of an underground utility using GPR, the time of travel of the GPR signal between the utility and the ground surface is divided by the velocity of the GPR signal. The velocity of the GPR signal can be obtained either from published tables of velocities for the type of soil underlying the site or by directly calibrating the GPR system on site by using utilities with known depths. The accuracy of GPR-derived utility depths typically ranges from 10-25 percent of the total depth.

Conventional Utility Locating

A Pipehorn 800 H and RD 8100 System is used by GeoView to locate underground utilities using conventional means. The system consists of a dual-function receiver and transmitter. The receiver can be operated in two modes: active and passive. In the passive mode the receiver detects the presence of underground utilities that are energized by a 60 Hertz cycle current. These utilities can either be those actually carrying electrical power or those utilities that are both

metallic and sufficiently close to the electrical lines to have an electrical field induced within them.

In the active mode, an electrical current is deliberately induced into the utility by the transmitter. The frequency of this field can be varied from 1 to 80 Hertz. The electrical field is induced using a transmitter which is either directly attached to the utility, placed on or above the utility or attached to an induction coil which is placed around the utility. Depths of underground utilities can be determined when the EM equipment is being used in the active mode. Depths are typically accurate to within 10 percent of the total utility depth.

On Site Measurements

The measurements that were collected and used to create the site map were made using a Trimble Geo7x GPS system.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:15	CN onsite, DF meeting straw wattle delivery at badging; morning traffic backed up due to SpaceX launch this morning, setting up for tailgate
7:45	WC, KH, DF escorted straw wattles delivery truck onsite; KH on Skidsteer (skid) offloading 6 pallets with DF spotting
8:15	DF, KH escorting straw truck to POL to offload other 4 pallets with Kubota
8:45	DF and KH return, all review and sign off on SSHASP
9:45	DF and KH offsite to LC34 for supplies; CS, SR and drill crew onsite completing well installations; CN and WC marking trench lines
10:30	DF and KH drop trailer offsite to retrieve spill pallets for CHP/POL
11:15	AM onsite
11:30	RO onsite
11:50	RO and AM offsite
11:55	WC and KH offsite for lunch, KH housekeeping
12:10	Drill crew and CS offsite, SR completing air sparge well inventory
12:30	WC and KH return; WC on DOOSAN 85 (mini) excavating 2-feet from area for manifold trailer #2; KH on skid removing and stockpiling soils in Zone 8
1:00	Drillers return, drill rig broke down
1:45	RL onsite briefly
2:00	RL offsite; KH on skid placing pallet of wattles in 4x4 for CN and DF to lay out
3:00	Wattles laid out north of center swale, KH on skid grading bottom of Manifold 2 for rack construction
3:30	WC on mini trenching Zone 7, working west to east
4:00	All offsite, CN and DF to CN's house to drop CN's truck off, CN drove DF back to site in work truck
5:30	All offsite

Comment:

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:10	CN at Home Depot for supplies (Unistrut and concrete)
7:30	CN to site, DF, WC, RL onsite; WC on DOOSAN 85 (mini), resumes trenching Zone 7, RL spotting
7:50	CN onsite
8:15	KH onsite
8:30	Tailgate meeting
8:45	WC and RL resume, DF and KH setting string level for Manifold 2 pipe rack installation
10:15	DF and KH mixing concrete to set Unistrut uprights
11:15	CN offsite to escort Frac tank from Badging to POL
11:30	KH offsite on Kubota to clear spot for drums @ CHP; DF offsite to LC34 for supplies
12:00	All return to HMFN
12:10	WC, RL, KH, DF offsite for lunch
12:50	WL, RL, KH. DF return; WC and RL resume; KH installing rack and T-post boundary along north side and hanging "Open Excavation" signage
2:30	During trenching it was discovered that AS0070 was potentially drilled through MW007 which was buried. CS investigated and felt the MW is full of sand/silt to 5' to 6' below grade, also asked AM to check RIS to confirm MW number, depth, and last time sampled
4:00	WC, KH, RL, DF offsite
4:15	RO onsite, CN talked and briefed
5:00	CN and RO offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN, DF, WC, RL, KH onsite
7:45	Tailgate meeting, discussed warning signal from 10 am yesterday, possibly due to earthquake off coast; combination of trench depth plus spoils height can not exceed 4-feet
8:15	WC on DOOSAN 85 (mini), resumes trenching, moving from Zone 7 to 6, still working west to east, with RL spotting
9:06	All watch Falcon 9 launch
9:10	All resume, CN assisting DF and KH
11:30	Pipe racks constructed
12:10	WC, RL, KH offsite for lunch
12:30	DF offsite to LC34 to work on HMFN manifold trailer, CN reviewing CHP trenching layout and providing comments to AM via Skype
1:00	WC, RL, KH return; WC on mini resumes trenching with KH spotting; RL offsite to LC34 to assist DF
2:30	Drill crew and CS complete final AS well and demobilize to POL
3:00	CN notifies Ryan Purdy of Synergy that a mechanic has not been onsite yet for Skidsteer float issue, to place fire extinguishers in mini and skid, and 4X4 not going into 4WD
4:00	All offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	WC, RL, KH, DF onsite
7:45	CN stopped for ice, then dropped off water, Propel, and ice to MB at CHP
8:00	CN onsite, Tailgate meeting, discussing wearing proper PPE for the job
8:15	DF and RL offsite to LC34, CN inspecting trenches, all okay, KH and WC cutting off air sparge (AS) well stickups and recapping so DOOSAN 85 (mini) can straddle them as it trenches, Synergy mechanic onsite working on Skidsteer float and fixing the 4X4's 4WD
8:30	CS onsite to pick up KH for former Headquarters building (HQ) PCB sampling
8:45	GC onsite briefly, CN briefed until 8:50
9:00	WC on mini resumes trenching, now working east across site connecting Zone 8 to Manifold 2 location, CN spotting;
11:00	JS of Synergy offsite
12:20	CN and WC offsite for lunch
12:50	WC and CN to HQ to drop KH lunch, stayed to discuss remediation methodologies with MD, Anne Chrest (AC), and RO as CS and KH completed sampling and decon; met Ralph Kennedy of Maverick
1:15	AC and RO drive to south side of HQ to watch Universal Engineering Sciences (UES) collect samples
1:30	WC and KH return to HMFN and resume trenching; CS to POL to prep HQ sample cooler; CN and MD walk perimeter of HQ; met Bill of Maverick and Margaret of UES; Bill said samples would be dumped out of Ziploc and recollected tomorrow with proper equipment and decon
2:30	MD drops CN off at HMFN
4:00	WC and KH offsite
4:15	CN offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN, DF, WC, KH onsite, Tailgate meeting discussing slides 5 of 10 of National Safety Council's website slide show
7:45	WC on DOOSAN 85 (mini) resumes trenching Zone 8 with KH spotting; CN and DF adjusting trench alignments
8:30	Issue with swing button on joystick of mini; DF, WC, and KH repairing; CN reviewing POL electrical design
9:15	WC resumes trenching
11:00	Call with RO regarding all AS designs; HMFN is BOSS-approved and they are seeking NASA approval; RO will wait and send POL design in next week to clarify our spacing question; BOSS is still working on outage and will likely plan for a weekend due to downstream effects
12:00	All offsite for lunch
1:00	All returned; RL onsite unloading supplies, WC resumes trenching in Zone 6 from west to east with KH spotting
1:30	RL offsite; DF offsite to LC34 for pipe reel and supplies
3:15	CS onsite with drill crew to demobilize drums and concrete mixer, DF returns with pipe reel and HDPE piping spools, KH on skid off-loading piping and reel
3:35	CS and drillers offsite
4:00	WC and KH offsite
4:15	CN and DF offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	DF, WC, KH, RL onsite setting up to deploy pipe and inspecting equipment
7:45	CN stops for ice
7:50	CN onsite, Tailgate meeting to discuss slips, trips, falls, mud, open trenches, uneven terrain
8:15	WC on DOOSAN 85 (mini), resumes trenching in Zones 6 and 9, working from south side to east side with RL spotting; DF and KH marked pipe rack with spacing for racking pipe
8:45	DF offisite to CHP to meet Dig Police for step-out clearance
9:00	CN on SE weekly call
9:20	DF returns
9:45	DF and KH begin deploying and racking 1-inch HDPE pipe in Zones 2 and 7
10:30	CN assisting DF and KH
12:15	All offsite for lunch; DF to CRCA and LC34 to restart systems
1:00	All return and resume
1:15	DF returns
4:00	WC, RL, KH offsite; approximately 5,500 LF of 1-inch HDPE deployed in Zones 2, 6, 7, and 9
4:15	DF offsite
4:45	CN offsite

Geoff Card	NASA Safety & Health	GC					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN, DF, WC, KH, and RL onsite, Tailgate meeting discussing measurement of pace and distance covered deploying piping
7:45	WC and KH greasing and inspecting DOOSAN 85 (mini) and Skidsteer (skid)
8:00	WC on mini, resumes trenching in Zone 8 with RL spotting; CN, DF, KH resume deploying HDPE piping in Zones 6, 8, and 9
10:30	WC completes trenching for Manifold #2, begins filling trenches for placement of warning tape and wire, RL leveling and backfilling
10:45	1-inch piping for Manifold #2 complete, additional approximate 3,500 feet today; CN and DF housekeeping, KH on skid moving pipe reel and excess piping back to lay down, then placing a pallet of straw wattles on south side of swale
12:00	Call from MD and Headquarters Epoch to discuss the KSC former Headquarters Building (HQ) schedule
12:15	CN, WC, KH, RL offsite to lunch, DF offsite to LC34
1:15	CN, WC, KH, RL return
1:30	RL offsite to LC34, WC on mini, resumes backfilling, KH raking and leveling
2:00	CN call with DF over parts delivery; DF is informed HDPE transitions should arrive late this week
2:30	CN has WC begin excavating box for Manifold #1; CN and KH laying out straw wattles around south side of swale
3:30	KH in skid moving and stockpiling Manifold #1 spoils
3:50	Skid showing error code, CN texting Pat Davis of Synergy
4:00	WC and KH offsite; RO onsite, CN briefs
4:30	CN offsite, texts with CH regarding IDW and UST sampling; call with AM regarding the same; texts with DW regarding 1 pm Space conference tomorrow; stopped at Home Depot for Unistrut, concrete, PVC cutters, post hole digger, stopped at BJ's for fuel
6:00	CN home, continuing texts with CH and MS

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	Text from Joey Herreau (JH) that there is no badge in system for him, asked him to check with AM to see if Dinh Vo confirmed submittal, call to CS to have him set MOT up at CHP for MB
7:15	CN stopped for ice
7:20	CN stopped at CHP to discuss schedule and order of sampling with MB and drillers; they need MOT along C Avenue first thing
7:30	CN to POL and assists CS with loading traffic cones and showing him MOT plan, also discussed HMFN IDW and underground storage tank (UST) sampling, WC and KH onsite at HMFN
7:35	JS, the Synergy mechanic, is onsite at HMFN for Skidsteer (skid)
7:50	CN onsite at HMFN, Tailgate meeting
8:15	CN inspects trenches; KH gathering supplies for Rack #1 construction; WC on DOOSAN 85 (mini), resumes excavating box for Rack #1
9:00	DF onsite, DF assists CN with cutting Unistrut and dropping off supplies
10:00	DF offsite
10:30	CN KH erecting Rack #1; WC begins trenching to the east
11:15	GC onsite, asked for Operator Qualifications for Drill Rigs spreadsheet
11:45	GC offsite
12:00	CN, WC,KH offsite
12:45	CN, WC, KH return
1:00	WC resumes trenching, CN on Space and Missile Launch OPS call
2:00	CN and KH placing concrete in rack post holes and erecting the second rack
2:30	Synergy onsite to swap out skid and 4X4, however 4X4 won't go in forward gear and was rejected
3:30	Rack #1 complete
4:00	All offsite
4:15	CN stopped at POL to ask CS to contact Drill Pro for skid operator qualifications memo/letter or spreadsheet

Project No.:	Project Title:	Hypergol Maintenance Facility North (HMFN) Interim Measures SWMU 90 Air Sparge (AS) System Installation	Date:	11-Feb
112G08982			Year:	2020
			Day:	Tuesday

Personnel Summary

Tetra Tech, Inc.			Onsite	Support Personnel:		Onsite
Program Manager:	Mark Speranza	MS		Wayne Crisafulli	WC	X
Project Manager	Chris Hook	CH		Ron Linton	RL	X
Project Engineer:	Alex Murphy	AM		Melissa Bennett	MB	
CM/Field Operations Supervisor:	Christopher Neumann	CN	X	Chuck Sorden	CS	
Site Safety & Health Officer:	Chris Adkison	CA		Rob Siegel	RS	
Field Engineer:	Dan Forester	DF	X	Sue Rogers	SR	
Project Support:	Kyle Hoard	KH	X	Alex Valli	AV	

Subcontractor:			Onsite			Onsite

Visitors:			Onsite			Onsite
Mike Deliz	NASA Technical Lead	MD		Jeff McDowell	Dig Police	JM	
Ryan O'Meara	NASA RPM	RO	X	Alfredo George	Dig Police	AG	
Geoff Card	NASA Safety & Health	GC					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:45	CN and RL onsite; RL prepping for tee installation
8:30	WC and KH onsite, Tailgate meeting
8:45	CN and WC paint trench line and re-marking utilities from Zone 5 to the trailer location; WC trenching; RL and KH resume installing tees
9;45	RL offsite to retrieve mud boots for he and KH, KH offsite to LC34 to retrieve two sump pumps and hoses, CN housekeeping
10:15	WC severs unmarked communication line buried at 2-4-inches bls; nobody currently in shop to check with; CN told WC to proceed
10:25	WC severs second unmarked communication line; CN call to JM who tells CN to call Josh Ballew @ 321-403-4461 to verify if communication lines were live, CN left voicemail for Josh
10:30	RL and KH return and resume installing tees
10:55	WC severs third unmarked line, assumed to be low voltage, CN call to JM to come check out before we proceed
11:00	WC on skid moving pallet of 1-inch HDPE spools to Manifold Rack #1 and moving straw wattles to trailer area for CN to lay out
11:30	CN and WC laying out straw wattles
11:45	DF onsite dropping supplies, marking Manifold #1 rack
12:10	All offsite for lunch
1:10	All return; RL and KH resume installing tees; WC on DOOSAN 85 (mini) half backfilling trenches in Zones 6, 8, and 9
2:00	CN call with MS, DW, AW regarding former Headquarters building (HQ) scrape cost comparison of 5-ft. vs.10-ft. sampling
3:15	CN and WC discuss HQ production rates
3:30	DF onsite with supplies
4:00	DF, WC, RL, KH offsite, CN housekeeping
4:15	RO onsite, CN brief
4:45	All offsite

Ryan O'Meara	NASA RPM	RO	X	Alfredo George	Dig Police	AG	X
Geoff Card	NASA Safety & Health	GC					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:45	CN, DF, WC onsite, Tailgate meeting
8:00	RL onsite
8:15	AG of Dig Police onsite; CN walks and talks AG through the events yesterday, DF and RL placing warning tape and marking wire in trenches while WC on DOOSAN 85 (mini) places backfill
8:45	AG locating area for trailer and area SE of M7-1011
9:15	Josh Ballew and John Wolf of Communications (Comm) onsite to investigate. Josh states that both comm lines need to be replaced because one line of each was being used. They will abandon fiber optic line that was cut. Josh sending crew to repair comm lines and calling in to duty office; offsite 9:40.
9:50	AG offsite; Shawn, Mike, and Robert of Communications Shop onsite to repair one comm line needed rather than both (Josh called crew to tell them the other line was not needed and will be abandoned in place; CN briefed the facility manager, Annie, and introduced her to Comm guys; skid needs repair due to track sticking; RL called Synergy
10:30	Annie offsite; CN re-marking utilities along roadway
11:15	DF returns to site; call from JM to discuss notes AG wrote on dig permit
11:30	Shawn, Mike, Robert offsite for lunch
1:00	CN, WC, RL, DF return; Comm guys already on site continuing repair
1:15	CN offsite to CHP to assist MB open monitoring wells
1:45	PD and RP of Synergy onsite
2:00	CN returns to site
2:20	PD and RP offsite; RO onsite, CN briefs and both walk over to comm repair as CN updated RO of day's activities (RE: damaged utilities), JS, the Synergy mechanic, onsite to repair skid
3:00	Comm guys offsite; CN tries to get JS to return (just left), due to skid not being fixed, sent text to PD
3:10	CN, DF, RO deploying 1-inch HDPE in Zone 1
4:00	All offsite, CN calls to MS and CH regarding utilities; call from MD and Rosaly questioning trenching and actions; calls with CS, DF, MS, and MO regarding protocols; searched SSHASP and only mentions locations, not what to do if utility contacted, dig permit states to call ISC Duty office, CN has always called dig police due to so many dead abandoned-in-place utilities on the Space Center, informed MD and MS
6:20	End of day

Mike Deliz	NASA Technical Lead	MD		Jeff McDowell	Dig Police	JM
Ryan O'Meara	NASA RPM	RO		Alfredo George	Dig Police	AG
Geoff Card	NASA Safety & Health	GC				

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:35	CN stops for ice
7:45	CN, DF, WC, KH onsite; Tailgate meeting discussing series of events leading up to and following comm line strikes
8:15	CN offsite to Dig Police office to discuss event with JM and to clarify note AG wrote on dig permit; JM edited note
8:45	GC onsite; DF called CN and placed GC on phone; GC would like NASA Mishap Report filled out; emailing to CN; CN en route to HMFN at 9:00
9:15	CN returns to site and inspects trenches, all okay; WC on DOOSAN 85 (mini) and KH on Skidsteer (skid) placing backfill in Zone 8
9:45	JS, the Synergy mechanic, onsite for skid repair
10:00	CN on Cocoa weekly call
10:30	CN responding to MD email requesting root cause by forwarding to Matt Soltis with timeline of the events; DF offsite
10:55	Call from GC regarding the email he just sent requesting the NASA Mishap Report and requesting a verbal description of events
11:20	CN resumes email response
12:10	JS of Synergy offsite
12:30	WC and KH offsite; a BOSS survey crew is onsite to survey the utility cuts
1:30	WC and KH return. WC resumes backfilling Zone 8
1:45	GC onsite briefly with additional questions regarding comm strike
2:00	CN responds to Headquarters email from Anne Chrest regarding splitting locations 2D and 2E to separate projects (to MS, DW, AW)
2:15	CN and KH deploying 1-inch HDPE to complete Zone 1
3:00	KH housekeeping; CN on root cause analysis call with Matt Soltis
4:00	WC and KH offsite
4:15	CN offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	CN stops for ice
7:10	CN onsite
7:30	DF, RL, WC, KH onsite; Tailgate meeting, more discussion of utility strikes
8:00	DF offsite; RL and KH setting up to install tees adjacent to the swale in the SE corner of Zone 6; WC on DOOSAN 85 (mini) assisting by bailing water
8:30	CN resumes call with Matt Soltis regarding the root cause
9:45	Light rains begin
10:00	CN on call with Chris Pike, AM, and Jen Buel regarding CHP
11:00	CN checking on crew progress
11:15	Call with MS regarding root cause progress
11:30	GC onsite briefly, mentioned email request for dig permit and GPR report
12:30	All offsite for lunch
1:30	All return; third Skidsteer (skid) had been dropped off by Synergy to replace second one, CN texts Pat Davis and Ryan Purdy of Synergy due to failed backup alarm and the fire extinguisher
1:45	WC on mini placing 1/2 backfill in trenches in Zones 6 and 7 for placement of warning tape and wire; RL and KH on skid placing backfill and grading areas where tape and wire have been placed; CN call to AM to reconfigure AS well layout at CHP to remove less berm and relocate manifold trailer prior to asking Becky Bolt for meeting at site
3:00	DF offsite
4:00	WC, RL, KH offsite
4:30	CN offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:35	CN stops for ice
7:45	CN, DF, WC, KH onsite; Tailgate meeting. Site too wet to work, making today a parts assembly day at LC34.
8:00	All inspect site, trenches, erosion and sediment controls.
8:15	RL onsite
8:30	All offsite; CN, WC, KH to LC34, DF to Home Depot, RL to CRCA and 516
8:45	WC and KH assembling parts
9:00	CN on SE weekly call
9:45	CN corresponding with Matt Soltis to try to resume root cause discussions
10:00	DF onsite at LC34
10:30	CN on HMFN proposal call with MS, Mark Jonnet, Chris Pike, Jen Buel, Alex Murphy, and Andrew Walters
11:00	CN on EGS monthly management call
12:15	WC and KH offsite to lunch
12:30	CN offsite to lunch; met WC and KH on way, café is closed; WC and KH heading off base for lunch, CN returns to LC34
1:00	CN offsite to have work truck serviced
1:45	WC and KH return to LC34 to resume assembling parts
3:30	WC and KH offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN, WC, KH onsite
7:45	RL onsite; Tailgate meeting
8:15	WC on DOOSAN 85 (mini) moves to Zones 1 and 4 to place backfill in trenches halfway for tape and wire placement; RL and KH setting up pumps to drain trenches again to resume 1-inch HDPE piping in Zone 5
9:00	DF onsite, CN briefs
9:15	CN offsite to CHP to meet Becky Bolt (BB) to make a plan to remove a portion of the eastern berm and protect the gopher tortoises
9:30	CN and BB onsite at CHP; CN will have area trimmed with a weed-eater and Kugelmann is to be staking on Thursday and Friday; BB will scope the burrows on east berm on Friday; if inhabited, they will be flagged to check again, if not, they will be collapsed; soil movement may be in "safe areas" and spread on existing berm surfaces; Dinh Vo onsite at 9:45, CN and BB briefed
10:00	All offsite CHP; CN returns to HMFN
10:15	CN inspects trenches with KH
10:30	GC onsite briefly
11:00	CN assisting RL and KH
12:30	Complete laying pipe in Zone 5, approximately 2,800 LF; all offsite for lunch
1:30	All return to site; RL and KH begin pumping water and installing tees at west end of Zone 1 working east; WC on DOOSAN 85 (mini), resumes filling trenches halfway
2:00	CN on call with Matt Soltis regarding root cause
4:00	WC, RL, KH offsite
4:15	CN offsite
4:45	CN stops to pick up project signs at Accuprint, but they closed early

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN onsite, unloading signs in trailer, hitching truck to trailer and loading skidsteer to move it to CHP
8:30	KH onsite assisting
9:00	KH on Kubota driving it to CHP; DF onsite with straps for skidsteer (skid)
9:15	CN, KH, DF to CHP
9:30	Becky Bolt (BB) onsite flagging gopher tortoise burrows; KH weed eating area of berm to be removed
9:45	Mason French (MF) of Kugelmann onsite at CHP surveying/staking air sparge wells
10:00	BB scoping burrows; all clear for berm movement
10:30	DF offsite; KH on skid begins moving berm soil and spreading it along the inside berm slopes, CN spotting to observe one burrow with BB to allow her to occasionally re-scope until the end of the burrow was reached
11:30	BB offsite
11:45	MF offsite to lunch
12:15	CN and KH offsite to lunch; ran into RO while stopping by HMFN, CN briefed
12:30	MF returns and resumes
1:15	CN and KH return; KH resumes moving berm soil
2:30	Dave Kugelmann onsite at CHP to assist MF
3:30	Berm movement complete; CN and KH offsite to return skid to HMFN
3:45	Drop off skid; CN and KH offsite
4:00	Drop trailer and reel at WC's for DF to work on tomorrow
4:30	End of day

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN call to KH to stop at CHP and drive Kubota to HMFN
7:45	CN, WC, KH, RL, AV onsite, Tailgate meeting
8:15	WC on DOOSAN 85 (mini) resumes placing backfill; RL, KH, and AV set up pumps to drain trench and resume installing tees
9:15	DF onsite; CN and DF discuss CHP stainless steel well parts and fittings
9:30	CN and DF on call with CP, CH, and AM discussing same subject; use galvanized, transition to 1-inch sooner, DF to sketch; find catalog cuts for parts
10:15	Tees complete; RL, KH, AV hand-shoveling section of trench that WC accidentally backfilled
10:30	WC re-excavating trench adjacent to 1-inch pipes for header; RL spotting; KH and AV installing rope fencing in trailer area
10:45	CN call with Roy Rushing of Trenchless Specialties to plan Thursday; KH and AV setting up 2-inch reel
11:00	CN assisting KH and AV
11:30	CN marking paths for trenching in Zone 3 and horizontal drilling
11:45	AG onsite to locate paths
12:30	All offsite for lunch
1:30	All return to site except RL; AG still onsite; AG discusses his findings with CN; AG offsite @ 1:45; WC resumes backfilling Zone 5; KH and AV resume placing second 500-ft. spool of 2-inch HDPE on reel
2:00	CN call to DF for portion of reel he cut off
2:15	DF onsite with piece of reel; all deploying two 2-inch HDPE lines from trailer area to trench where horizontal drillers will pull them beneath road and swales to Zones 3 and 10; WC begins trenching Zone10 with KH and AV spotting
4:00	RO onsite; CN briefs; WC, KH, AV offsite
4:30	CN, RO, DF offsite

DAILY ACTIVITY REPORT

Project No.:	Project Title:	Hypergol Maintenance Facility North (HMFN) Interim Measures SWMU 90 Air Sparge (AS) System Installation	Date:	26-Feb
112G08982			Year:	2020
			Day:	Wednesday

Personnel Summary

Tetra Tech, Inc.			Onsite	Support Personnel:		Onsite
Program Manager:	Mark Speranza	MS		Wayne Crisafulli	WC	X
Project Manager	Chris Hook	CH		Ron Linton	RL	X
Project Engineer:	Alex Murphy	AM		Melissa Bennett	MB	
CM/Field Operations Supervisor:	Christopher Neumann	CN		Chuck Sorden	CS	
Site Safety & Health Officer:	Chris Adkison	CA		Rob Siegel	RS	
Field Engineer:	Dan Forester	DF	X	Sue Rogers	SR	
Project Support:	Kyle Hoard	KH	X	Alex Valli	AV	X

Subcontractor:			Onsite			Onsite

Visitors:			Onsite			Onsite
Mike Deliz	NASA Technical Lead	MD		Jeff McDowell	Dig Police	JM	
Ryan O'Meara	NASA RPM	RO		Alfredo George	Dig Police	AG	
Geoff Card	NASA Safety & Health	GC					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	DF onsite with ice
7:30	WC, AV, RL onsite; Tailgate meeting and discussing to-do's: RL to backfill and grade with skid; WC on mini, AV, and KH to trench in Zone 10 and Zone 3, spotter at all times; DF hook-up Frac tank to drain per CH
8:00	KH onsite
8:30	Dig police onsite to clear Zone 3 but did not stop. DFcall to Dig Police at 9:00, they said Zone 3 is clear to excavate
10:00	Dinh Vo (DV) call to DF to meet at Pad 39A at 1 pm
11:00	Start trenching in Zone 3
12:00	Lunch-all
12:45	All resume, DF offsite to Pad 39A with DV; DV wants compressor restarted since trenches have been backfilled by SpaceX. When restarted compressor alarm "Overload fan motor". DF checked voltages at 277, 278, 277, then called Atlas to schedule a service
2:00	DF returns to HMFN; trenching complete. DF, AC, KH, and AV offsite to CCB to pull cabinets for use in HMFN Zones 3 and 10. DF call to Mark Jonnet to see if RO is okay with moving two cabinets for use at HMFN. RO had not talked with CH but is okay with using the cabinets.
3:00	DF calls Freese for roll-off ETA (not today), will be there by 11:00 tomorrow due to no liners
4:00	All depart, end of day

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN, DF, WC, KH, RL, AV onsite; Tailgate meeting
7:50	Call from KP of Trenchless Specialties, Inc (TSI), crew at badging
8:00	KP, AB, JC onsite; CN briefs on JHA
8:15	TSI crew walk site with CN
8:30	TSI crew settling for 160-foot bore from Zone 3 to east of M7-1011; KH and AV setting up pump to drain trench in Zone 3 for drilling mud; RL on skid backfilling area of Zone 10 where drill rig will need to set up later
9:00	DF, KH, AV, and RL offsite to retrieve manifold cabinets from CCB
9:30	TSI crew begin 160-ft bore
11:30	Bore complete
11:15	DF, RL, KH, AV return; TSI prepares for pullback
11:30	MD, Anne Chrest (AC), and RO onsite, CN briefs
11:15	TSI begins pullback to pull two 2-inch pipes through the bore hole
12:00	MD, AC, RO offsite
12:15	TSI moves drill rig and RL fastens both 2-inch HDPE pipes to Skidsteer (skid) for WC to continue pulling until off reel; AV and CN spotting at reel
12:30	TSI offsite for lunch. CN and WC pull one 2-inch pipe an additional 100-feet to make sure it will reach Zone 10 on next TSI bore
12:45	All offsite for lunch
1:45	All return, TSI setting up to bore from Zone 10 under swale to Zone 3; CN, KH, AV posthole to find utilities in bore path; DF and RL offsite
2:30	WC on DOOSAN 85 (mini) excavating trench over utilities along bore path
3:00	TSI boring Zones 10 to 3
3:30	TSI pull back
3:40	TSI offsite, all housekeeping
3:55	RO onsite, CN brief
4:00	WC, KH, AV offsite; RO and CN offsite at 4:10

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN, AV, WC, KH onsite; Tailgate meeting
8:00	WC on DOOSAN 85 (mini) cleaning out area for erection of Zone 10 rack; CN, KH, AV gathering supplies to erect rack
8:30	CN and AV erecting rack; KH offsite for fuel
9:00	KH returns and fuels mini
9:15	KH offsite to retrieve two bags concrete from CHP; WC excavating new trench in Zone 3 to allow 2-inch pipe to fall into place once pulled back toward the trailer area, CN spotting
9:30	KH and AV pouring concrete in rack post holes
10:00	RL onsite, begins deploying 1-inch HDPE pipe in Zone 10 and racking; KH on skid and AV preparing for 2-inch pull back to trailer
10:45	Pulling pipe into trench
11:15	All offsite for lunch
12:45	CN returns
1:00	WC, KH, RL, AV return, begin deploying 1-inch HDPE in Zone 10
2:00	Approximately 1500' pipe deployed; WC, KH, AV installing tees; RL offsite to work out PC issues; CN reviewing root cause analysis report
3:15	Zone 10 tees complete; all housekeeping
3:30	WC, KH, AV offsite
4:00	CN call from Matt Soltis regarding root cause
4:30	CN offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7;30	CN, WC, KH onsite, Tailgate meeting
7:45	AV onsite
8;00	All walking area where five 2-inch HDPE header lines need to trench across the swale in the center of the site; moving straw wattles and marking utilities
8:30	GC onsite, CN brief
8:45	GC offsite
9:00	KH on skid placing soil across swale to both trench through and drive 4X4 across swale to deploy 2-inch piping, WC prepping to trench, AV spotting; CN on weekly call
9:45	CN assisting KH to set up 2-inch reel and spool
10:15	WC backfilling small branch of header trench with 2-inch lines to Zones 3 and 10; CN assisting with installing tape and wire
10:30	CN re-marking utilities in trailer area
10:45	WC on DOOSAN 85 (mini) resumes trenching to trailer area with AV and KH spotting
11:00	CN on call with Matt Soltis finalizing root causes
12:15	All offsite to lunch
1:15	All return; resume trenching/hand excavating to expose utilities, CN assisting
2:45	WC on mini half-backfilling Zone 10; CN, KH, and AV deploying and racking 2-inch HDPE piping for Zones 7 and 8 to Manifold #2 and second half of Zone 2 from split where tee is to be welded to Manifold #1
4:00	All offsite
4:30	CN offsite, stopped at CHP to check on CS
5:15	CN and CS offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	WC, KH, AV onsite
7:45	CN and RL onsite, Tailgate meeting
8:10	KH and AV installing tracing wire and caution tape in Zone 10
8:15	DF onsite, scoping two AS wells in Zone 10 prior to completing backfill
8:30	CN, KH, AV, RL deploying 2-inch HDPE to Manifold #2 for Zones 6, 9, and 2, and Manifold #1 for Zones 1, 4, and 5
10:15	WC completed backfilling Zone 10, proceeds to resume trench excavation in Zone 3
11:30	2-inch pipe deployed, approximately 2500 LF; CN, KH, AV, and RL welding tee in Zone 2 header line and coupler in Zone 10 header to add short section of pipe to reach trailer
12:15	All leaving site to lunch, but stop due to arrival of man-lift that is supposed to be delivered to office for training tomorrow; CN redirects delivery
12:30	All to lunch; call from AM that tractor is at badging to be escorted to move the frac tank from HMFN to CHP; CN call to DF to meet and escort
1:00	DF meets and escorts the tractor from the Badging Office to HMFN
1:30	All return to site; WC on DOOSAN 85 (mini) begins placing 1/2 backfill from sidewalk working way north to manifolds; KH, RL, AV complete welding 2-inch coupler and tee
2:00	CN offsite; KH, RL, AV erect pipe racks for trailer and Zone 3 cabinet
3:00	KH, RL, AV move silt sock to downslope side of Zone 10 upgradient of swale, cleaned off the road
4:00	All offsite

Ryan O'Meara	NASA RPM	RO		Alfredo George	Dig Police	AG	
Geoff Card	NASA Safety & Health	GC	X				

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN and AV onsite
7:45	DF and KH onsite
8:30	AV and KH setting up to weld 2-inch transitions at Manifold #2 and trailer rack
10:00	DF and KH setting up to mount cabinet for Zone 10 while CN and AV weld 2-inch transitions at trailer rack
10:30	CN and AV assisting DF and KH
11:30	GC stops by site briefly and informed us that KSC is going to mandatory telework tomorrow, but did not know how that would impact our operations
12:00	All offsite for lunch
12:45	CN receives call from MD with instructions to prepare sites for potential shutdown tomorrow (COVID-19)
1:00	All return to site and proceed to de-mobilize items to be worked on off-property in the event of project shutdown tomorrow; also remove trailers and parts from LC34 to resume assembly off property
4:00	Drop off trailers, tools, and supplies at WC's property

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:45	CN, RL, KH, AV onsite; AV drives crew to FDSA to watch launch and conduct Tailgate meeting
8:30	All return to site; RS onsite to drop off Atlas Copco O&M supplies delivered to Orlando's office by mistake
8:45	RL offsite to retrieve Kubota and trailer from WC's; RS and KH offsIte to POL to unload supplies; CN and AV prep to bolt down cabinet at Zone 3
9:15	RS and KH return and assist CN and AV
9:45	RL returns and assists
10:30	Zones 3 and 10 cabinets bolted in; all begin loading reels and spools of pipe for transfer to POL
11:00	Offloading at POL
11:30	Re-loading 2-inch spools at HMFN
12:00	Drop trailer at POL and break for lunch
1:00	Return to POL and unload
1:30	Return to HMFN for six pallets of 1-inch HDPE
1:50	To POL to unload
2:10	Return to HMFN for six pallets of 1-inch HDPE and one pallet of straw wattles
2:30	To POL to unload
2:50	Return to HMFN to retrieve the portolet, hand wash station, MOT road signage, and last of parts and supplies. The rolloff box, some 2-inch piping, and the skid steer remain
3:30	To POL to unload and place road signage in POL shed
4:00	All offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:15	CN stops at WC's to pick up hydraulic trailer
7:30	CN, DF, RL, KH, AV onsite at POL; Tailgate meeting, brief crew on SSHASP
8:30	All walk site to review dig permit and utility markings; also come up with plan to begin excavation in Zones 7 and 8 on south side of site
8:45	RL on DOOSAN 85 (mini), begins excavation/trenching with AV spotting
10:30	CN and KH offsite to HMFN
10:45	CN and KH at HMFN racking Zones 6 and 9 2-inch pipe and final housekeeping
11:00	CN drops KH at DF's truck for them to go to Tiki Shack to meet a parts delivery; CN call from MD asking for CHP drilling progress: 61 AS wells set at CHP, so approximately half-way completed, approximately 3-4 more weeks anticipated
11:30	CN at POL
12:00	DF and KH return; RL offsite; all break for lunch
12:45	RL returns and resumes trenching; KH and AV offsite to LC34 to gather soil sampling equipment for former Headquarters building (HQ) PCB sampling
2:00	AV and KH return; CN making calls to recruit samplers to coordinate HQ sampling effort for tomorrow
3:00	AV and KH to HQ to scout sample locations
4:00	All offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	Crew meeting for former Headquarters Building (HQ) sampling; call from KH that Mark Boward badge request not submitted; CN text to MD and Anne Chrest; Anne responds that she is submitting
7:15	CN at Home Depot buying Unistrut, concrete, marking paint, and gloves for POL and carabiners for HQ
8:00	CN at Publix buying Ziplocs for HQ and Propel for crews
9:00	CN drop supplies at HQ and then retrieves ice for both projects
9:30	CN at POL unloading supplies; RL has been on DOOSAN 85 (mini) clearing and root raking SE corner since 7:30 am
10:00	RL begins trenching Zones 6/7 south of GN2 line, working west to east
10:30	CN on BD team call
11:30	Call from MD, will soon be receiving letter to shut down construction activities (COVID-19)
12:15	RL offsite for lunch; DF onsite to fuel mini
1:00	DF offsite; CN on Space and Missile Operations call; RL returns and resumes; AV stops onsite to say farewell before heading to airport; others are shipping samples and putting equipment away and managing IDW
1:15	DF returns with more fuel for mini, Skidsteer (skid), 4X4, and Kubota
1:30	DF offsite
3:00	Receive letter/email forwarded by MS from NASA Contracting to cease construction, but continue O&M (COVID-19)
4:00	RL offsite; CN tours and photographs sites (HMFN, CHP, POL) and loads Kubota to transfer to WC's property
5:00	CN offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:45	RL onsite POL on Kubota traclor mowing. CN stop for ice.
8:00	CN and KH onsite; tailgate.
8:15	KH resume assembling parts for HMFN.
9:00	RL offsite to check on system at other sites.
9:30	KH offsite to HMFN to install legs into manifold trailer.
9:50	CN to HMFN.
10:45	RL onsite HMFN, assisting KH.
12:00	RL and KH offsite to lunch.
12:15	CN to POL for lunch.
1:15	CN and KH repairing hole saw bit.
1:30	RL onsite assisting.
1:45	All offsite POL to HMFN. RL, KH resume plumbing manifold trailer #1.
3:00	RL and KH move to trailer #2 to drill holes in floor.
4:00	RL and KH offsite.
4:30	CN offsite to CHP to check on SR and drilling progress.
5:00	CN offsite.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN onsite POL, fill cooler with water and pick up ice.
7:45	CN onsite HMFN; call to KH. KH retrieving supplies from LC34 for James Lloyd and Mark Broward to collect waste profile samples at KHQA after managing 39 A/B IDW.
8:00	RL onsite, tailgate.
8:15	RL setting up men working ahead sign and cones and inventorying parts and tools needed to plumb zone 10, manifold cabinet 4 and zone 3, manifold cabinet 3.
9:00	CN and RL to POL for parts and tools.
9:30	CN and RL return to HMFN; RL begins plumbing manifold 4.
11:00	KH onsite assisting RL.
11:45	Manifold cabinet #4 complete, KH and RL move on to cabinet #3.
12:30	Manifold cabinet #3 complete besides cutting and rebanding cam-lock onto 2-inch hosing to fit. All offsite.
1:30	CN and RL at POL gathering tool and supplies to install 2-inch hosing in manifold trailer #2.
2:00	CN and RL at HMFN, unload parts and tools, RL plumbing trailers.
4:00	RL offsite.
6:00	CN offsite.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	WC onsite CHP on Mini resumes trenching nearby AS wells. CN call to JM for permission to trench at CHP due to dig permit stating "call back for trenches" and we have maintained markings. Okay and follow up with AG when he returns to KHQA on Monday.
8:00	KH and RL to HMFN to resume installing flex line from racks into manifold trailer #2. CN at CHP reviewing dig permit and SSHASP with WC.
9:00	CN cutting down PVC stickups to allow Mini to straddle as WC continues trenching.
10:50	CN check on WC, cut off 2 more AS wells, then goes to KHQA to add pin flags to utility markings.
12:00	CN return to CHP. WC, KH onsite, CN lunch.
12:30	DF onsite CHP.
12:45	CN to KHQA to walk site with MD, Bruce Davidson (BD), Mike McMcullough (MM), Ralph Kennedy (RK), Lisa (Epoch) and a BOSS inspector. Bruce will try to get RK permission to have electric sub lock out tag out (LOTO). Parking lot lighting, 3 condensers, and 2 irrigation timers. CN to have HVAC Co. remove refrigerant. RK electric sub disconnect and remove 3 condensers.
2:45	Walk complete. CN talk with MD. BD is having Tom King mark 3 water shutoffs in case of damage.
3:30	CN to CHP. DF potholing communication line. CN call with AM.
4:00	WC offsite. KH stopped by to inform CN that hosing to manifold #2 is complete. CN to KHQA to pin flag north and east sides (dig police locates this morning).
4:45	CN offsite.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:45	DF, WC, KH, onsite CHP. Tailgate
8:00	CN stop for ice then onsite. All walk potential new electric line for movement of AS trailer so as to not block access to the AS expansion in the field to west.
8:15	James Lloyd onsite.
8:30	WC on mini, trenching in SE corner of site with KH spotting, DF and JL to POL to move tool trailer to CHP.
9:00	DF and JL return, CN on southeast weekly call, Rob Siegel onsite.
9:40	Call from Tom Johnson asking CN to join QA council, DF and JL offsite.
9:45	CN call with Linda Diano to talk over HQ SSHASP rev 1 amendment 1 comments and presentation expectations.
10:00	CN on NG review call.
10:15	DF returns and takes over spotting WC, KH and RS offsite to HMFN to install blocks and anchors on manifold trailers.
10:30	CN, DF, WC layout electric trench.
12:00	Lunch.
12:45	CN to HMFN to assist KH and RS anchoring manifold trailer #1, DF and WC resume.
1:30	CN return to CHP.
2:15	CN returns to HMFN to assist again.
3:00	CN to CHP, call with AM and Chris Pike regarding manifold design from Geosyntec/PRM. Send them our details to build it in trailer rather than Conex and no electric is necessary.
3:20	Phase II
3:30	WC, KH, RS, offsite.
4:00	Phase II terminated CN and DF to POL to remark utilities and inventory Unistrut.
4:30	DF and CN offsite with trailer to purchase Unistrut and 3-inch electric conduit in morning along with picking up walk behind concrete saw from home depot.

Program Manager:	Mark Speranza	MS		Wayne Crisafulli	WC	
Project Manager	Chris Hook	CH		Ron Linton	RL	
Project Engineer:	Alex Murphy	AM		Melissa Bennett	MB	
CM/Field Operations Supervisor:	Christopher Neumann	CN		Chuck Sorden	CS	
Site Safety & Health Officer:	Chris Adkison	CA		Rob Siegel	RS	
Field Engineer:	Dan Forester	DF		Sue Rogers	SR	X
Project Support:	Kyle Hoard	KH		Alex Valli	AV	

Subcontractor:			Onsite			Onsite
Jacob Bayles	Chrome Electric	JB	X			
John Rauch	Chrome Electric	JR	X			
Greg Floyd	Chrome Electric	GF	X			

Visitors:			Onsite			Onsite
Mike Deliz	NASA Technical Lead	MD		Jeff McDowell	Dig Police	JM	
Ryan O'Meara	NASA RPM	RO		Alfredo George	Dig Police	AG	
Geoff Card	NASA Safety & Health	GC	X			

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:45	CN called SR to stop by KHQA to pick up the HMFN SSHASP and that GC had called to say that he was onsite and Chrome was onsite and he was calling SR. SR texted GF who responded that the crew had shown up earlier than he originally informed SR.
8:15	SR stopped by KHQA then to HMFN
8:50	SR conducts tailgate meeting; wear safety glasses due to flying bugs/debris and maintain hydration due to heat
9:00	Chrome crew working on temporary junction box
9:20	JB and JR setup a canopy for shade. Setting up temporary junction box for Wednesday, July 29th.
9:45	GF onsite. Crew finishing work. SR taking photo of temporary junction box.
11:45	All offsite
11:50	SR stopped by KHQA to return SSHASP. CN asked SR to hold onto it in anticipation of the 0700 start time on 7/29 for continuation of the electric installation.
12:00	SR offsite.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	Chrome and Tt onsite.
7:05	Chrome laid out color coded cable.
7:20	SR conducts tailgate meeting; wear safety glasses due to flying bugs/debris and maintain hydration due to heat
7:30	Chrome finishing laying out cable.
7:45	Crew waiting for outage personnel
7:50	SR texted CN about when to pick up LOTO tags and stickers (2 sets).
8:05	SR stopped by KHQA to pick up the tags and stickers.
8:15	SR returned to HMFN. SR asked GF for status of cable installation. GF stated that ground wire is installed and the cable will be pulled once the trailer is air sparge trailer is onsite.
8:30	Outage crew arrives; two BOSS trucks and two more Chrome Electric trucks
8:50	BOSS offsite
8:55	JB inside substation wearing electrical PPE; full suit, hardhat with shield, 2 sets/layers gloves
9:00	CN onsite
9:05	Ground and neutral are bonded on substation. LOTO applied to breaker in the off position. GF showed SR to verify and SR took photo.
9:20	Cutting cable and putting into temporary junction box and wrapping ends with electrical tape. Cable tightly placed into temporary box and cover reattached.
9:45	Ron Gilles of Chrome Electric onsite to observe work and speak with CN and Chrome crew
10:05	CN offsite
10:10	RG offsite
10:20	GF calling BOSS to turn on power at substation.
10:30	BOSS onsite to turn on power
10:45	All offsite

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	CN and KH onsite.
7:15	RL and WC onsite; tailgate.
7:30	S229 onsite; CN, WC, KH uncover Stockpile 12, RL on WL loading from Stockpile 12.
7:55	S229 offsite. RL scraping Stockpile footprints into Stockpile 12. CN, DF, WC, KH, discussing LC34 excavation.
8:45	250 onsite, RL loading. WC and KH on 4x4 gathering debris around building; housekeeping.
9:10	250 offsite. RL on WL assisting WC and KH housekeeping.
11:20	S229 returns, RL loading last of Stockpile 12, WC on Mini assisting with CN and KH setting up to decon buckets over the truckload.
12:00	CN, KH, DF decontaminate buckets over the truck bed.
12:30	S229 and RL offsite; lunch.
1:15	CN on NASA MCL Meeting call (late)
1:45	RL returns. CN and KH fueling Volvo ECR88 Mini.
2:00	DF offsite to escort AS trailer delivery from badging to HMFN. CN offsite fueling dump truck. RL fueling WL from CN's truck. WC and KH relocating office trailer from KHQA to POL.
2:24	Phase II.
2:30	RL cleaning out dump truck cab. CN offsite to HMFN to drop trailer anchors in trailer.
2:45	All offsite.
3:00	CN send trailer photos to Chris Hook.
3:15	CN stop for fuel for heavy equipment.
4:30	CN offsite.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN, DF, KH, RL onsite at KHQA. Tailgate.
8:00	DF offsite to HMFN to meet dig police for trailer anchor locations. KH and RL prepare for going to LC34 to install tires on Kubota tractor, load steel plates to protect sidewalk at KHQA and 2-inch steel piping for CHP.
8:30	CN, RL, KH to LC34.
8:45	RL and KH loading 2-inch pipe. DF to Home Depot for supplies.
9:00	KH and RL installing new tires.
9:30	RL and KH to CCF to pick up 1-inch steel pipe for CHP. CN investigating LC34 for feasibility of dropping roll-off box beneath pedestal and seeking a location to build soil stockpiles to the southeast of the pad.
9:45	CN to CCF. DF tracking skid from CHP to HMFN.
10:00	CN on Cocoa Weekly call. CS on skid loading 1-inch steel for RL and KH. RL and KH to SW3 to pick up steel pipe.
10:45	All at HMFN positioning trailer to mark locations to install anchors.
12:00	Lunch.
1:00	DF and RL saw cutting squares in asphalt with KH removing squares.
2:00	CN assisting KH auger through lime rock.
2:30	CN offsite to locate tool for driving anchors.
3:45	DF, KH, RL, housekeeping.
4:00	KH and RL offsite. CN and DF continue to search for tool.
4:45	CN and DF gather parts to make another tool.
5:00	CN and DF offsite.
4:30	CN offsite.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:15	CN onsite KHQA with first backfill truck. CN has him dump in Area 8.
7:30	RL onsite KHQA.
7:45	WC onsite KHQA with skid and compactor attachment, KH onsite with Kubota tractor, DF onsite. Tailgate.
8:15	RL on wheel-loader placing backfill loads in Area 8, WC on skid prepping stockpile footprint Areas for sod. DF and KH offsite to HMFN to install 2-inch header hosing and check on SR working with Chrome to complete cable and panel installation.
8:30	CN call to Corey Nail to walk site for sod takeoff Wednesday. CN calculating loads per area for rough backfill truck distribution.
9:00	CN on SE Weekly call.
10:00	CN to HMFN to check on progress; Chrome installing cable and DF and KH installing hose.
10:15	CN housekeeping then to CHP to check on MB2 with drillers DPT sampling, then to POL to drop supplies and pickup parts for HMFN, drop parts at HMFN, then return to KHQA.
11:00	CN on EGS operations call.
12:00	Lunch.
1:00	WC and RL placing backfill in Areas 7,8,9,10. KH to HMFN and CHP to mow. DF to POL to offload supplies and load Maintenance of Traffic (MOT) signs and cones for CHP.
2:00	CN check in with Ralph Kennedy when his electricians will be onsite for Lock-Out-Tag-Out (LOTO) turnover. Answer: Tomorrow morning.
3:00	Last load of backfill for the day (13 total)
3:20	DF to CHP to remove MOT signage due to pending rain.
3:30	RL and WC offsite.
3:35	DF to HMFN, call to CN to call duty office to request SS109 be opened at 9AM tomorrow for Chrome to remove their LOTO. CN spoke with Kim at BOSS Duty Office.
3:45	DF prepping summa cannisters for samples tomorrow.
4:00	CN offsite.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
6:15	CN receives text from Randy Morales of C.A.G that backfill pit is closed due to rains yesterday. CN text to crew.
7:30	CN onsite KHQA.
7:45	RL onsite KHQA. Call from Ralph Kennedy that his electrician is onsite for LOTO turnover. CN call to DF who is at HMFN with SR and Chrome and had set up summa canisters.
8:00	DF onsite KHQA walking building with electrician. CN and RL to HMFN.
8:15	RL on tractor mowing HMFN.
8:30	KH onsite HMFN begins weed eating.
9:40	CN making calls to follow up on last evenings request for electricians to open SS109 for Chrome to remove LOTO and energize breakers.
10:00	CN receives call from electric console that electricians to be onsite in 10 minutes.
10:15	BOSS electricians onsite to open SS109, Greg Lloyd of Chrome removes LOTO, energized breaker, and completed a voltage check. DF conducted a digital rotation check within the AS trailer and energized the lights and air conditioning.
10:30	BOSS and Chrome offsite. Crew watch launch.
10:45	SR onsite.
12:00	RL offsite for lunch. KH offsite to move tractor to POL begin mowing. CN and DF to CHP to remove MOT signage and discuss steel pipe layout.
12:30	CN at POL; lunch
1:15	KH offsite, RL onsite mowing.
2:30	Phase II- RL offsite.
3:00	DF picks up summa canister from HMFN.
3:30	CN offsite POL.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN and RL onsite POL. Fuel tractor.
7:45	RL mowing POL, CN to HMFN.
8:00	Jim Frydl and John Evans of MAE2 onsite HMFN. DF onsite. DF states that security needs Richard Payne (Atlas Copco) badge request resubmitted. Chris Hook trying to contact Ryan O'Meara and CN trying to contact MD. CH re-emailed to MD.
8:15	DF briefing MAE2 on SSHASP.
8:30	CN meet and greet MAE2. DF, JF, RP start system and pressure test. Find several loose fittings and tighten.
8:45	
10:00	KH offsite to LC34 for PIDs.
10:30	
11:20	
11:40	
12:00	All take lunch. CN check on HMFN and KH offsite to POL. RL offsite. RS onsite.
12:20	
1:20	CN on call with AM regarding whether CHP AS trailer has been approved, CN to HMFN to ask Jim Frydl if MAE2 were building it. Schematic not approved. CN email to Chris Pike to get AS and manifold trailer approved and constructed for December delivery.
1:45	CN returns to POL. RL and KH move on to mow SW3. DF calibrate PID @ 99.7 ppm with 0-0.1ppm background.
2:00	All fittings are tight and system holding air. DF sends air to all zones at 0.5 scfm@20 psi. DF walk site with PID readings at 0-0.1 ppm.
2:30	
2:45	
3:10	
3:30	DF walk site with PID readings 0-0.1 ppm. Retighten several loose MW caps. Find 4 broken AS wells to be fixed. RP says compressor operating as it should. DF and JF shut system down for the night.
4:00	DF, RS, JF have rundown and to-dos for tomorrow.
5:30	JF departs
6:00	RS departs
7:00	DF departs

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:00	CN on site. First load of backfill dumped in Area 11 and leaving site. CN asks Sunrise Systems of Brevard Team Working in KHQA to move vehicles parked adjacent to building later this morning.
7:30	RL onsite, drives CN to POL to retrieve 4x4, brief rain.
8:00	CN texting with Randy Morales of C.A.G. regarding 2nd backfill truck badging and directions.
8:45	WC onsite, offloading skidsteer.
9:00	CN on SE Weekly call. WC on skid placing and grading backfill.
10:00	KH onsite, retrieving skidsteer from CHP and begins working from east end of building to west raking and filling. Randy Morales of C.A.G onsite briefly.
11:15	CN offsite to badging to meet Herc Rentals delivery of pipe threader and stand for CHP.
11:50	CN returns.
12:00	RL offsite, lunch.
1:00	RL returns, all resume. CN on calls with AM and DF regarding CHP trailer layout and manifold trailer markups while periodically spotting backfill trucks.
1:45	WC switches to compactor attachment on skidsteer and makes multiple passes on Areas 8-22.
3:15	BF trucks last load of day. 15+12=27 today. 27+13 last week = 40 total to date.
4:00	RL, WC, KH offsite. RS call to CN to relay HMFN being shutoff for night due to PLC overheating issues. Restart in the morning.
4:30	CN offsite to CHP to check on CS and drill crew.
5:15	CN offsite.

Geoff Card	NASA Safety & Health	GC					

Description of Work Performed, Problems Encountered and Resolutions:

Time	
6:45	First BF load of day delivered.
7:00	CN onsite.
7:30	WC, RL, KH onsite.
7:45	WC and KH each in a sidsteer and RL on wheel loader resume placing and grading backfill working from Areas 18/19 counterclockwise around the building.
8:00	CN sending emails regarding hurricane response and spotting backfill trucks.
9:30	CN on call with DF, CP, AM regarding CHP AS trailer layout, second hot trailer vs 2 compressors in 1 trailer, and manifold trailer comments. CP arranging cals with Geosyntec and MAE2 and Geosyntec and PRM.
11:30	RS onsite to brief CN on HMFN startup status. RL places backfill on sidewalk to be protected. WC grades backfill as RL retrieves steel plates and places them on backfill to protect sidewalk.
12:00	RL offsite. Lunch
1:00	RL returns, all resume placing and grading.
2:00	CN offsite briefly to fill fuel tank.
3:25	Last load of backfill for today 15 + 14 = 29 for today + 40 = 69 to date.
4:00	All offsite. CN to HMFN to check on RS and system. CN capped one MW as he was leaving and notes to RS there may be some AC loss in air gap along compressor air instake shroud. RS taping.
4:20	CN to CHP to check on CS and drill crew. CA had replaced CS late in day.
4:45	CN offsite . Stop to fill fuel tank on way home.

Description of Work Performed, Problems Encountered and Resolutions:

Time	
7:30	CN onsite KHQA.
7:45	RL, WC, KH onsite KHQA. Tailgate.
8:00	RS onsite to drop off pipe camera for KH and update CN on HMFN status.
8:15	WC resumes grading as RL and KH resume raking/shoveling along building wall.
8:30	RS offsite, CN assisting RL and KH.
10:00	CN on Cocoa Weekly call.
10:45	CN resumes assisting RL and KH.
12:00	RL offsite, lunch.
1:00	RL returns, WC and KH load CAT skid into trailer and WC leaves site. RL and KH load steel plates and excess straw
1:30	CN offsite to HMFN for a pallet and stuck around to talk Chris Hook through system operating conditions due to compressor alarms he is receiving. Compressor is cycling but there are no alarms showing or shutting down system.
2:00	CN returns to KHQA, KH and RL had left site to demobe trailer to LC34 and offload contents.
2:15	CN call to MD to see when he wants to walk site, he will be onsite in 15 minutes or so.
2:30	CN cleaning out 4x4 and stacking t-posts on pallet for demobe.
2:45	MD onsite, walks perimeter of buildling with CN.
3:15	KH and RL return and resume raking/shoveling.
3:45	CN and MD offsite to HMFN to tour site.
4:00	KH and RL offsite. MD offsite. CN and RS measuring air intake and discharge shrouds and sound hood requested by Chris Hook and Shawn Evans of MAE2 and also discuss system operations and why compressor is cycling.
4:45	CN and RS offsite. CN call to AM to see is he can assist HMFN start up tomorrow. AM will assist tomorrow and deliver summa canister.
5:30	End of day.

Sonic Drilling
Air Sparge well installation
PM Chris Hook: 412-921-8790 (w)
mobil: 724-766-1043
Weather: 64° Sunny

Arrived @ site 0725

Personnel:
- Sue Rogers (SR)
- Chuck Sordon (CS)
- Ben Yarene (BY)
- Jared Link (JL)
- Dave Langine (DL)
- ~~Antwan Smith (AS)~~
- Thomas Watson (TW)

Contaminants of Concern: (COC) Jared
cDCE, tDCE, TCE, VC, Freon 113.

0850 GPI onsite
0900 HAS meeting - topics COC's, obstacles such as ditches, smoking, PPE - Level D utilities - especially the High Pressure liquid N_2 signing the SS HASP (Site. Specific Health & Safety Plan) CS conducted. and
~0915 "Dig Police" arrived onsite - Jeff McDowell (BOSS) checking out the utilities near the road
0935 Antwan has to leave site due to badging - past criminal record issue, have to go to badging station
1005 Antwan turned in his badge - SR escorted
1025 back @ HMFN
1050 DL mobilizing @ Location 0003.
1055 CS sent me contact info. for Chris Hook (PM)

Drill team: Dave & Ben

Rig # 8140LS Geoprobe brand
Boring will be taken from 20' - 30' for the 25'-27' screened interval goal.

AS-
Location 0003 Target: 25-27', 1" diameter

1050 (as already noted) mobilized @ 003.
1105 post-hole dug to 5' bls.
1125 moving sand bags, etc. preparing for AS (air sparge) well installation -
1130 starting to drill, stopped due to dialog on casing diameter
1200 - break for lunch - offsite
1245 back from lunch, TT staged onsite
1300 drilling @ AS-0003

Scale: 1 square = _____

Rite in the Rain

AS0003 (cont.) HMPN - old nomenclature - used for sample ID for consistency.

HMPN-AS0003
1320 10' "holy rod" used for core
1325 20'-30' core samples laid-out.
1335 called Chris Hook - v.f. to f.g. sand - he said set AS well at prescribed depth (25'-27')
1340 proceeding to install AS well (1")
1415 bentonite slurry, well setting

Soil stratigraphy @ AS0003:

20-25' gray to greenish gray f.g. to v.f.g. sand w/ trace med-coarse ~~pebble~~ sized shell fragments and trace silt possible
25-30' same as above.

Location HMPN-AS0002 1" diameter, 25'-27' target

1440 hand dug (w/ post hole digger) to 5' bls
1450 drilling initiated
1510 sample bags out.
1515 called Chris Hook - He said 25'-27' okay
Soil Stratigraphy:

20-25' gray to greenish gray f.g. to v.f.g. sand w/ trace med-coarse shell fragments

1520 well installation initiated. (1")
1620 well installation complete
1645 well grout setting, cleaning up site for Tuesday, setting up at location HMPN-AS0004
1700 left site

So, 60' today, total.

e: 1 square =_____

December 3, 2019 HMFN #112608982

AS Well Installation
"HMPN" - old nomenclature used for location ID.
GPS onsite 0700
T+ onsite 0700

Crew:
Sue Rogers (SR)
Dave Longine (DL)
Ben Yarene (BY)
see 12-2-19 for Chuck Sordan's crew

Weather: 45°F, sunny

Health and Safety topics: PPE for cold weather, lifting & twisting CS conducted

HMPN-AS0004 (1", 25-27')

0740 @ site HMPN-AS0004, proceeding with drilling after preparing for daily unloading sand bags, etc.
0800 pulled core - 20'-30'
0810 called Chris Hook to report the soil core findings- he said keep the screened interval @ 25'-27'

Soils: 20'-25' limited sample- wash-out. gray f.g. to v.s.g. sand, trace m.g. shell fragments
25'-30' same

0830 Bentonite pellets in place, developing well, water collected in a poly tank.
0855 casing extension attached, well grouted.

HMPN-AS0006 (1", 25-27')

0905 mobilizing to HMPN-AS0006
0910 hand auger to 5' bls
0935 soil core samples bagged - same material
0940 called Chris Hook - he said set as planned (25'-27')
0945 proceeding w/ well installation
1005 bentonite pellets in place, well development underway.

Scale: 1 square =_____

Rite in the Rain

HMPN - AS0006 Soil Description:

20-25' gray (greenish?) f.g. to v.f.g. sand w/ tr. m.g. shell
25'-30' Same as above, more f.g. than v.f.g. compared to 20-25' but only slightly.

HMPN-AS0006 (1", 25'-27') cont.

~~0445~~ AS well grouted, 1" casing extended to ~5'
0540 above landsurface

HMPN-AS0005 (1" 25-27')

1045 hand auger to 5 ft b/s
1050 drilling underway
1115 soil samples laid out
1120 called Chris Hook, he said to set well @ 25'-27'
1125 setting well

Soils: AS0005

20-25' greenish gray v.f.s. to f.s. sand w/ tr. m.g. to coarse-g. shell fragments
25'-30' same as above.

1150 grouting well, ~~a~~ casing attached to approx. 5' above ground

HMPN-AS0008 (1", 25'-27')

1155 mobilizing @ HMPN-AS0008
1200 lunch GPS - 1245 T+ 1205-1235
~~1205 1210~~ starting up drill rig
1400 Chris Hook said okay to set well @ 25'-27'
1345 looking @ soil cores (20-25', 25'-30')
1405 proceeding to set well.

HMPN-AS0008 - cont.

14 bentonite pellets to seal Sand pack
1430 grouting well, extension attached to 5' above land surface

HMPN-AS0010 (1", 25'-27')

1445 hand auger to 5ft. b/s.
1450 proceeding to drill
1515 looked @ soil cores - Same as previous
1520 called Chris Hook - he said to proceed with 25'-27' screened interval.
1525 pictures of core 20-25, 25-30' ✓
1525 proceeding to complete well at 25-27' screened interval, bentonite over sand pack, developed.
1550 grouting annudlar space over bentonite seal, adding PVC extension to ~5' above land surface
* see next page for soil descriptions

HMPN-AS0012 (1", 25'-27')

1555 mobilizing to AS0012
1600 drilling to 30'
1625 looking @ soil samples (20-25, 25-30) same material as other locations, but at 20-25 more brownish gray (see next pag for soil descriptions) trace to little silt from 2
1700 grouting well.
1705 adding PVC extension to ~5' above grade.

Note: all AS wells painted orange if developed.

Rite in the Rain

HMPN-AS0010 Soils

20-25' ~20'-22.5' lt brownish gray f.s. to v.f.s. sand w/ trace mg to cg shell fragments, 22.5-25' same but grayish green.
25-30' same as above to approx. 27.0 where lt/lt ~~to~~ silt was present, grading back into f.s. to v.f.g. greenish gray sand w/ traces of m.g. to c.g. shell fragments until 30' bls

HMPN-AS0010 Soils

20-25' f.g. to v.f.g. greenish gray sand with traces of m.g. to c.g. shell fragments
25-30' same as above.

Total 180' today.

December 4, 2019 HMFN Page 1 of 1

HAS meeting - CS conducted
smoking - do not smoke near rig, general concerns

Personnel: Chuck Sorden (C.S.) - Sonic Rig #8140LS
Sue Rogers (SR)
Dave Longino (DL)
Ben Yarene (BY)

Weather: clear, 52°F

GPI onsite 0700
Tt onsite 0700

0700 filling up water tanks @ hydrant
0715 Health and Safety meeting - C.S.
0735 drilling @ AS0007

HMPN-AS0007 (1" diameter 25'-27' screen)
0730 hand auger to 5ft bls
0735 drilling began
0800 checked the soil samples (20'-30') same material - keep screened interval @ 25-27'
0810 developing well
Soils: 20-25' core
greenish gray f.g to v.f.g sand w/ trace m.g. to c.g. shell fragments
25-30' core
same as above, but at ~28' sand is more f.g. than v.f.g., ~~and~~ (sand is less fluid w/ depth) more packable like beach sand (sand castle)
0830 attaching extension to AS well to 5' above l.s. (land surface)

0835 moving to HMPN-AS0009.

Note: CS relayed message about today being a critical launch day, so no drilling near utilities or liquid N_2 line (no angled drilling)

HMPN-AS0009 1" diameter, 25'-27' target screened interval

0840 hand augured to 5' bls (below land surface)
0845 drilling initiated.
0900 looking @ soil boring samples - 25'-27' okay
0915 developing well

Soil Boring ~~(core)~~ samples - AS0009
20-25' f.g. to v.f.g. greenish gray sand w/ tr. m.g. to c.g. shell fragments
25-27' same
~27-30' gray (not greenish) f.g. sand w/ tr. shell fragments.

0930 PVC extension added to ~5ft above grade and grouting well.

HMPN-AS0011 1" diameter, 25'-27' target Screened interval

0945 mobilizing @ HMPN-AS0011
0950 hand auger boring to 5ft bls
0955 drilling
1015 Soil cores collected, 20-25' & 25'-30' OK for 25'-27'
1020 PID Reading:
20-21 0.0 ppm | 21-22 0.0 ppm | 22-23 0.0 ppm
24-25 | 25-26 | 26-27
27-28 | 28-29 | 29-30
1025 pictures taken

Soil Description: AS0011
20-25' f.g. to v.f.g. greenish gray sand w/ trace of m.g. to c.g. shell fragments
25'-~~30~~'27' same as above
27'-30' ~~mor~~ f.g. to v.f.g. w/ increasing amounts of shell.
1025 developing well
1050 well grouted, 5' 1" PVC extension added.

HMPN-AS0014 1" diameter, 25'-27' screened interval (planned)

1055 mobilizing to HMPN-AS0014
1100 hand augered to 5ft bls
1105 drilling initiated
1130 20-25' & 25-30' soil cores taken - Ok for 25'-27'
1145 well developed.
1205 well completed.

Soil Description: AS0014
20-25' greenish gray f.g. to v.f.g. sand w/ tr. shell
25-30' same as above washed-out Samples.

P.I.D. Reading = 0.0 ppm @ all depths.
12:10 - 1240 GPI lunch.
SR lunch (T+) 1220-1250 (CS@sight w/ crews)
After lunch & filling water tanks!

HMPN-AS0017 1" diameter, 25'-27'

1320 mobilizing @ HMPN-AS0017
1325 hand-augered to 5' bls
1330 drilling initiated.
1400 soil cores collected- okay for 25'-27' screened interval
PID Reading: 0.0 ppm @ all depths

Soils: AS0017
20'-23' brown (reddish) f.g. to v.f.g. sand (no shell fragments)
23-28' greenish gray f.g. to v.f.g. sand w/ trace of shell fragments
28'-30' same as above, but more f.g. than v.f.g. sand.
1445 grouting well, attaching 5' above l.s. casing (1"-diameter)

Rite in the Rain

*HMPN - AS0016 1" diameter 25'-27' screened interval

1450 hand auger to 5 ft. b/s.
1455 proceeding to drill
1520 Soil core samples laid-out, 25'-27' interval okay, took pictures after PID readings @ 1' intervals - all depths 0.0 ppm PID reading.
Soils: 20-25' f.g. to v.f.g. greenish gray sand w/tr. shell fragments, 25'-30' same, becoming more f.g. sand at ~ 27' b/s.

HMPN - AS0013 1" diameter 25-27' screened interval

1615 mobilizing to HMPN - AS0013
1620 hand auger to 5ft b/s
1625 proceeding to drill
Soil core samples taken from 20'-25' and 25' to 30' b/s.
Soils: AS0013
20-25' f.g. to v.f.g. greenish gray to gray sand with traces shell fragments, ok for 25'-27' screened interval. 25'-30' same
~~1700 grouting well~~
PID Readings - 0.0 ppm @ all depths
1640 Bentonite pellets, well development (after sand pack)
1700 grouting well, attaching 5 ft. extension of PVC (above land surface)

Note: no 1' sump for the 1" AS wells.

So, 210' today.

* HMPN = Old nomenclature used for AS Well ID.

December 5, 2019 HMFN

TT. onsite - CS 0700 Weather 52° Sunny
JR 0710
GPI 0700 My crew: Dave Longino
PM in charge: Chris Pike Ben Yarema
(Chris Hook out of office)
Mobilizing @ HMPN - AS0147 2" 43'-48'
core 40'-50'
Actual screen: 41.5-43.5

0815 mobilizing @ AS0147
0820 post-hole digging to 5 ft b/s
0825 proceeding to drill
0900 core samples taken @ 40'-50'
Chris Pike (call of him) he said set @ 41.5-43.5 (sump 1' below, so total depth 44.5).
0925 proceeding to install AS well.
0940 20/30 sand
1020 grouting well

Soil Description: AS0147

40'-41' f.g. to v.f.g. gray sand w/ tr. shell fragments (m.g. to c.g.)
41'-43.5' larger shell fragments and f.g. to ~~m~~fg sand (gray) some shell ~~fragments~~ intact, fragments m.g. to pebble-size
43.5-46.5 gray clay w/ shell fragments trace to little tr. silt, some shells whole (2" clam shell intact)
46.5-50.0 Gray clayey silt w/ shell fragments, m.g. to c.g., some whole

PID Reading: 0.0 ppm at all depths
mobilizing to next →

Rite in the Rain

Boring 40'-50'
screen target 43'-45'

HMPN-AS0135 2" ASwell

1020 mobilizing to AS0135
1025 post hole digging to 5ft b/s
1100 3 soil samples pulled. Actual: 41'-43'
called Chris Pike - decision to screen at 31'-33' due to very poor recovery - no clay/deep samples recovered. Presuming the geology is similar to AS0147. Consulted w/ Chuck S.
Soils: presumed shifted into deeper zones, no clayey layers recovered.
PID Readings: 0.0ppm at all depths
Soils: ~40'-42' f.g. to v.f.g. sand w/ tr shell fragments m.s. to c.g.
42'-? gray shell fragments, - full intact shells, conch shell half, "shell hash" w/ f.g. to v.f.g. sand
1135 developing well
1155 grouting well.

(lunch GPI 1215-1300) SR - stayed @ site, ate & paperwork

HMPN-AS0124 2" AS well, 40'-50' soil 43'-45' target for screened interval

1200 mobilizing @ AS0124 Actual: 41'-43'
1315 hand augr to 5ft b/s
1330 samples - deeper samples washed out again, so 41'-43' for screen - to 44' total including sump (1')
PID Readings: 0.0 ppm @ all depths

AS0124 Soils: same as AS0135 above, not representative of depth, clayey layers not captured due to wash-out. Took pictures of cores as they were retrieved, but the samples presumably shifted deeper. made call to screen @ 41-43' interval for conservatism.
1415 developing AS0124
1500 grouting well.

Note: when called this morning, Chris Pike said if the conditions continue to be the same, apply past recommendations. So, we did not call him again for this wash-out sample, applying same logic as previously agreed upon (41'-43' screen plus the 1' sump, so total AS well depth = 44').
1500 Road crew setting up cones along eastern edge of property, CS spoke with them.

HMPN-AS0113 2" diameter ASwell
43'-45' target zone
40'-50' soil sampling
Actual screened interval: 41'-43'

1515 hand-augered to 5 ft b/s
1520 drilling initiated.
1600 checking soil samples, clayey layer @ ~43' so setting screened interval at 41'-43', with the sump down to 44'. Good recovery this time. They (DL & BY) used a 2" sampling core hoping to reduce the wash-out.
1605 Soil PID Readings: 0.0 ppm @ all depths

Soil Description: AS0113

40'-45' 40'-43' "shell hash" gray shell fragments. m.s. to gravel w/ little to some f.g. sand and possible silt, 43-46.5' silty clay w/ gray 46.5-47.5 gray same mine shell, shell fragment
45'-50' 47.5-50' clayey silt w/ sand (v.f.g to f.g.)

1610 Well Installation starting.

Left site @ 1640.

C.S. waited both drill rigs until 1730.

Weather: clear, warm 72°F.

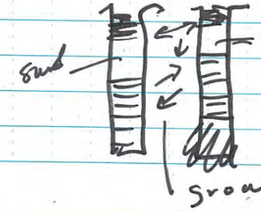
T+ onsite: 0815
GPT onsite: 0845

Today we are installing monitoring wells due to BY's knee injury - it is easier physically to install wells.

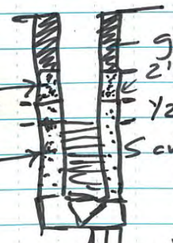
So, Well Cluster MW29 - MW33 will be installed with the following screened interval's:

* MW29 (10' - 20')
MW30 (20' - 30')
* MW31 (30' - 40')
MW32 (40' - 45')
* MW33 (45' - 50')

* will be installed first to allow the grout to dry 24 hrs* - the screened intervals need to be spaced apart so grout does not interfere with the other wells while drying.



* overnight okay to install in-between wells, well development wait 24 hrs.



grout to surface - no bentonite

30/65 sand - 2' above 20/30 sand

20/30 sand from bottom of screen to 0.5' above

Allowing for 2'-3' pad - make room - the AS well location is more critical than the monitoring well location.

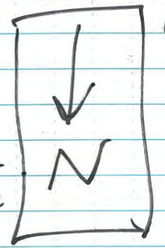
So, we moved the MW location over instead of moving the AS well location.

DL said he will leave a space for the 4 remaining wells that will be installed tomorrow. CS said alignment does not matter. (N-S vs. E-W, etc.)

MW-029 12-16 20'-30' ↑ MW-031 12-16 40'-45' ↑ 12-16

-E ③ ○ MW-030 ② MW-032 ○ ① #MW033

Shallow 10'-20' 30'-40' Deep 45'-50'



ese will run E-W, but within confines of site

① installing first MW-033 (screen 45'-50')

0 ① started drilling deep well ~ (MW-033) sand, then grout.

30 called Chris Hook to let him know that we are drilling wells today since BY has a sore knee - Chris said keep an eye on BY to make sure he is okay to work. BY said he is fine to help w/ the well and will not do anything to further injure his knee.

45 Discussion on well pads - singles or clusters TBD design too close for this type of drilling (for 72" * 24" pad shown on IM Workplan).

00 spray painting utilities marks that are added (SR)

30-1220 lunch - GPI

1230 drilling resumed.

300 grouting well. #② (after 20/30 & 30/65 sand) Screen 30'-40' MW-031

MW-029 (10'-20' screen)

1315 moving to well #③ the shallow, 10'-20' screen

1345 drilling initiated, BY doing well - no limp due to knee, just taking a precaution to minimize exertion & let it rest -

1350 PVC lowered into boring.

1355 20/30 sand poured into well annulus using the cones, then followed by 30/65 sand.

1400 grouting well.

1425 mobilizing to H-I monitoring wells (~~#34~~ & #35)

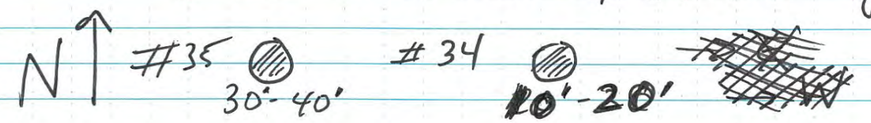
H - 10'-20' (#34) MW-034

I - 30'-40' (#35) MW-035

1515 20/30 sand in well annular space (40')

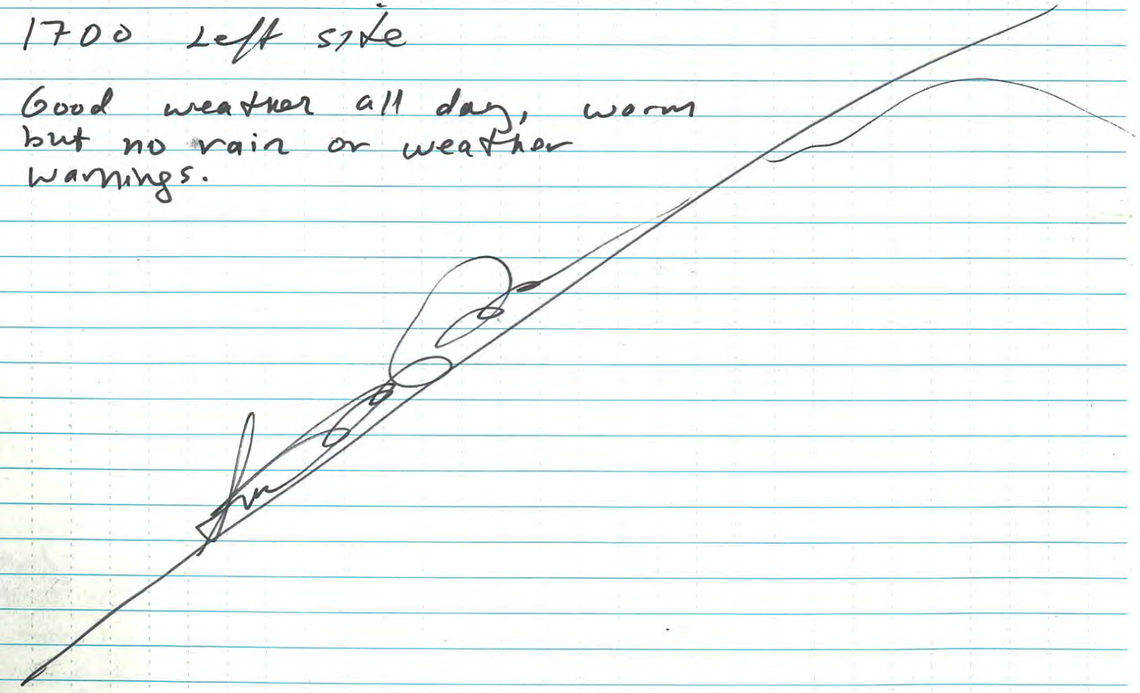
1530 30' well installation initiated!

1545 20/30 sand in well annular space (30') to 0.5' above screen, followed by 30/65 sand



1700 Left site

Good weather all day, warm but no rain or weather warnings.



Rite in the Rain

T+ onsite 0700 CS 0715 SR GPI onsite 0700
Weather: 73° F, clear

Personnel: Sue Rogers T+ (SR) Chuck Sorden (CS) T+
GPI: Dave Longino (DL) Thomas Watson (TW)
GPI: Ben Yaremia (BY) Malcolm Smith (MS)
Jared Link (JL)

BY - knee much improved.
Starting @ in-between wells from 5-well group #30 & #32
↑ mw-033 mw-032 mw-031 mw-030 mw-029
NN Continuing on cluster of 5 wells (mw):

MW-032 (40'-45' screen)

0750 hand-auger boring to 5 ft. b/s @ mw-32 (40'-45' screen)
0800 Drilling initiated.
0820 20/30 sand around well followed by 30/65 sand
0830 pulling up drilling casing
0845 grouting annular space - pouring from blue barrel after mobilizing to next location.

MW-030 (20'-30') screen

0840 mobilizing to mw-030 (east of mw-032, so only slight adjustment of drill rig position)
0845 post hole to 5' b/s
~~0950~~ 0850-0900 SR quick break
0900-0945 my crew helping with other rig, gathering supplies
0955 - drilling commencing @ mw-030
0955 - CS sent out text w/ afternoon weather warnings.
Well clusters: still on path to build individual well pads due to Sonic well installation - too far apart to cluster the well pads into 3's & 2's, but according to CS a superior method for installing wells due to allowing more annular space around wells.
1000 attaching 1" PVC well casing

MW-030 - cont.
1005 20/30 sand followed by 30/65 sand (2') measuring depth w/ tape measure.
1010 mixing grout
1015 adding PVC pipe (1") extending above-ground to pour water into sand pack, hydrating, then pouring grout into annular space.

Back to Air Sparge well installation:

HMPN-AS0121 Screen Target: 43'-45'

1035 mobilizing to HMPN-AS0121 Actual Screen: 40.5-42.5
1100 after hand-augering to 5 ft b/s, drilling is commencing.
1130 soil samples pulled, confining layer at ~42.7', so SR called Chris Hoch w/ information. He said to set the screen at 40.5'-42.5' with the sump to 43.5'.
1135 well installation implemented, 20/30 sand poured
1140 measuring top of sand pack.
1150 developing well
1200 well installed ~~w/ grout~~.
1205 - 1235 lunch. GPI SR 1220 - 1250

50' 0.0

took pictures
1735 - GPI left job site, Tt stayed on to finish w/ soil pictures. very buggy, getting dark

Soil Boring Descriptions: AS0119

40'-42' SAND - fine to very fine-grained, trace coarse to medium shell fragments, some tiny intact clams
42'-45' SHELL - granular to medium-grained; some fine to very fine sand
45'-48' CLAY, little to some fine to very fine sand, trace to little gran. vcg. to medium shell fragments
48'-50' SAND - very fine-grained, little clay, trace to little granular to medium shell fragments

1745 SR left job site.

HMF North
(HmPN old nomenclature) Wednesday, Jan 8, 2020

GPI, Tt 0700 SR @ 0715 - had to grab PID out of charger.

Weather: cold, 50°F Clear

Note: Ask drillers about bentonite from 50' to 46' when we have a deeper well. (AS)

HmPN-AS0119 - cont.
0715 developing well
0745 well installation complete.

HmPN-AS0130 Actual Screen: 40'-42' total to sump: 43'.

0832 soil sample collected
0835 called C. Hook - told him that the clayey layer starts at about 42' b/s. So we agreed to set the screen at 40'-42'. Also noting that there is no sand layer here, indicating a shallower C.L. With the deeper C.L. locations there was typically a substantial sandy layer (sand w/ shell) ~3 ft. then the shelly layer (shell hash). We are moving closer to G Avenue (east).
0840 20/30 sand poured into well annulus.

PID Readings: 40' 0.8 41' 2.7' 42' 0.3
43' 0.0 44' 0.0 45' 0.0
46' 0.0 47' 0.0 48' 0.0 49' 0.0
50' 0.0.
0855 developing well.

Soil description next page →

Rite in the Rain

HMFN - AS0130 Soil Boring Description

40'-42' SHELL - Gray c.g. to m.g. fragments, trace to some whole snail shells, (~1" across) some f.g. to v.f.g. sand, little silt

42'-43' Same with some clay and clay lenses and larger shell fragments present - 2" across clam shell pieces

43'-45.5 Gray Clay, trace to little vfg sand, silt possible trace c.g. to m.g. shell fragments

45.5-~~47.0~~ 48.0 Gray CLAY and f.g to vfg sand, trace to little c.g. to m.g. shell fragments; some tiny intact snail shells,

47.0-50.0 Gray fg to vfg Sand and clay, trace throughout to none m.g. shell fragments, clay lenses, silt possible. ~~some~~ random tiny intact clam & snail shells very sparse w/ shell fragments

0915 removing outer casing.
0920 well installation complete.

HMFN - AS0142 - 2" AS Well

Actual Screened Interval: 39'-41'
Total Depth 42'

0925 mobilizing to AS0142 hand augers to 5' bls, etc.
1000 soil sample taken
1014 called C. Hook. - said C.L. @ 41' -
1004 shallower, closer to G-Avenue - we agreed on a screened interval from 39'-41', total depth to slump 42'.
1015 well installation commencing.

PID Readings: 0.0 ppm at all depths.

HMFN-AS0142 Soil Boring Description

40'-41' SHELL - GRAY - VGG gran. to m.g. and f.g. to v.f.g. sand, trace to some silt possible, some small shells intact, random fragments up to 2-inch across. (oyster, conch pieces)

41-41.5 Same w/ clay lenses

41.5-45.0 CLAY - Gray and fg to vfg sand trace to some c.g. to m.g. shell fragments, ~~some~~ random large pieces up to 1" across,

45.0-48.5 Gray SAND fg to vfg and clay, trace to none c.g to m.g. shell fragments - more like none., clay lenses.

48.5-50.0 Gray CLAY, some vfg. Sand trace to none ~~c.g.~~ c.g. to mg shell fragments - more like none.

1030 developing well. (AS0142)

HMFN-AS0154

Actual Screened interval - 42.5-44.5' sump to 45.5.

mobilizing to AS0154. soil samples collected called C. Hook - said this is a weird one - same elevation, but ~2' sand above the shell consulted w/ CS and called C. Hook back. C.S. said 44.5 screen depth, 45.0 to push it

PID Readings: 0.0 ppm at all depths (40'-50') 1-ft. intervals, but detected an odor - like Play doh / WD-40' - sweet chemical smell.

Soil Borings Description → next page.

cont. discussion w/ C. Hook (after asking C.S.'s opinion - he said 44.5, so 42.5-44.5 for screen. Note: I initially thought 42'-44' for conservatism,

but there is a transition zone from 44'-45'; SHELL and/some clay

Soil Borings - Description - AS0154

40'-42.25' Greenish Gray f.g. to v.f.g. SAND; trace c.s. to m.g. shell fragments, some tiny clam shells intact.
42.25-44.0 SHELL - (Gray) ~~more Bluish~~ (gran.) VCg to m.g. some fg to vfg sand, some to little silt. Greenish Gray
44'-45' ~~Same w/ some clay~~ SAND f.g. to vfg, some (gran.) VCG to med gr. shell fragments, small intact & larger (1" pieces) some clay, silt possible
45-48' CLAY (more bluish gray), some vfg sand, trace c.g. to m.s. shell fragments, increasing w/ depth some small whole snail shells (& clam)
48'-49.5 Gray SAND - f.s. to vfg, (gran.) and ~~some~~ clay, some vcg to m.g. shell fragments, decreasing w/ depth (trace to none)
49.5-50 Gray clay, little vfg sand, silt possible, trace to no med. gr. shell fragments.

HMPN - AS0159 2" AS well

mobilizing, hand-augr to 5' b/s
soil sample collected
called C. Hook - Actual Screened Interval: C.L. @ 43', so we agreed 41'-43' on 41-43' for screen. Total depth: 44'.
PID Readings: 0.0 ppm at all depths
1445 checking the depth to 20/30 sand (ML)

HMPN-AS0159 - cont.

Soil Borings - Description

40'-42' Greenish Gray SAND - fs to v-fg w/ trace to little vcg to mg shell fragments
42'-43' SHELL - greenish gray (gran.) VCg to intact ½" shells, to mg fragments and fg to vfg sand, silt possible
43-44 CLAY and sand (more clay) fg to vfg sand little to some vcg to mg shell fragments
44'-47' CLAY, some fs to vfg sand trace to some (gran.) VCg to mg shell fragments.
47-49.5 SAND fg to vfg, some clay (will not roll), trace cg to mg shell fragments random large piece (½") (Bluish gray) silt possible
49.5-50.0 Bluish gray CLAY, some fs to vfg sand trace to none cg to mg shell fragments

HMPN-AS0164

Actual Screened Interval: 41'-43'
Sump depth: 44'

mobilizing to AS0164
1620 soil samples collected
called C. Hook - we agreed on 41-43' screen
1635 measuring the 20/30 sand pack.
PID Readings: 0.0 ppm at all 1.0' intervals.
1640 developing the well.

Rite in the Rain

HMPN-AS0164 Soil Boring Description

40'-43' ~~Sft~~. Greenish Gray SHELL - vcg (gran.)
to mg
43'-43.5 ~~Greenish~~ (gran.) vcg to mg ~~SAND~~ Gray SHELL, some fg to vfg Sand (&) some clay, possible silt
sluish?
43.5-48.5' CLAY (gray) some f.g. to v.f.g. sand, trace to little c.g. to m.g. shell fragments
48.5'-48.5' SAND fg to vfg and clay sand -
f.g. to v.f.g. trace to little c.g. to ~~f~~m.g. shell fragments.
48.5-50' CLAY (gray), little f.g. to v.f.g. sand, trace to none c.g. to m.g. shell fragments
1705 adding casing extension to well.

Chuck info. for tomorrow morning:

#207 ~~62.5~~ 63.5° angle 49' depth

#209 48.8° or 49° 58.2' depth w/ sump included.

Scale: 1 square = _____

Weather: cool, ~~51~~ 61°F, windy
0700/0700

Crew:

(MS) Malcolm Smith Dave Long (no (JL))
(JL) Jared Link Gemma Rivera (GR)
(TW) Thomas Watson

Here w/ both crews (SR) 7:11 ~1000. (1030)

HMPN-AS0173 DL & GR
~~HMPN-AS0207~~ JL, TW, MS

0730 mobilizing to AS0173.
0740 mobilizing to angle well AS0207
0750 called C. Sorden to verify line-up (may be 2"-4" to south) He said that's okay. JL is proceeding with 63.5° angle, *49' depth length, total depth 43'. * 49' including sump.
0810 AS0173 drilling commencing
0820 Both rigs advancing steel casing to depths specified.
0844 Soil borings (samples) pulled for AS0173.
0846 called C. Hook w/ C.L.C @ 40.5' 6/s So, he said to set screen @ 38.5-40.5, 41.5' to sump. We are about 50' to the west of G. Avenue. JL helping while AS0207 hydrates. (AS0173)
0850 proceeding to drill 41.5' well @ AS0173.
0855 20/30 sand in well annulus @ AS0173
0900 bentonite pellets to 3' above 20/30 sand.
0905 AS0207 still hydrating
PID Readings for AS0173: 0.0ppm @ all 1' intervals
0915 developing AS0173.
0930 AS0207 hydrating, completed 0935 mobilizing to AS0207.

Soil descriptions for AS0173
40'-~~41~~ 40.5' (gran.) Greenish gray SHELL vcg to mg, some fg to vfg sand and some silt
40.5-~~41~~ 45.5' Bluish gray CLAY, some fg to vfg sand and some silt possible, trace to little shell frag
45.5-48.0 SAND and clay (Bl. gray) trace shell to 47', then no shell fragments, no silt, 48-49.5 ~~SAND~~, CLAY little ~~some~~ sand, trace to none mg shell

0850 drilling proceeding @ 209 angle - had to stop, re-position
0900 #209. - angle well - aimed at utility flag
instead of 209B stake - have to re-do
after 20' casing advanced.
0900 - re-positioning rig. Angle: 48.8° (49°)
and 57.2 length - ~ 58 + 9 = 39'
0910 commencing drilling w/ corrected position
toward 209B stake.
0915 drilling underway @ AS0169. (vertical 2"
well) (0930 grouted AS0173) Actual Screen (0169)
1035 sample collected at AS0169 = 38.5 - 40.5
1041 called C. Hook - AS0169 - C.L. @ 40.5
so we are setting the screen @ 38.5 - 40.5
PID Readings: 0.0 @ all 1.0' intervals
1100 developing well.
1130 well installation complete.

AS0169 Soil Borings Description

40.0 - 40.5 ~~gre~~ gray (gran.) Shell - vcg to mg; some
fg & vfg sand ~~and~~ clay (little clay)
40.5 - 49.0 CLAY; bluish gray - gray
with some sand: fg to vfg, trace to
no shell, especially diminishing w/ depth
49 - 49.5 Gray clay - no shell
49.5 - 50.0 SAND - gray fg to vfg and
clay, no shell
12:00 - 12:30 TT lunch (SR) 12:00 - 1300 GPE

AS0168 (HMPN) Actual Screen 39.5 - 41.5

1315 mobilization, hand auger boring complete
1320 drilling commencing.
1355 samples collected 40' - 50'
1358 called Chris Hook - C.L. @ 41.5, but
not as defined from 40 - 41.5 (some clay
mixed in, but unconsolidated w/ sand &
shell) So we agreed on a screen from
39.5 - 41.5', total depth 42.5' (to sump)
1400 well installation initiated
1420 well development
PID Readings 0.0 ppm at all 1-ft intervals
of soil samples

AS0168 - Soil Borings - Description

40.0 - 41.5' Greenish gray (to gray?) SAND -
f.g. to v.f.g. and Shell fragments - v.c.g. to m.g.
2 - 2" oyster shells found, little silt possible.
little clay
41.5 - 44.5 CLAY; little to some sand,
trace to some v.c.g. to m.g. shell
44.5 - 48.5 SAND and clay w/ clay lenses
(Gray), trace to no m.g. to c.g. shell
fragments, ~~little~~ (v.f.g. sand), little silt possible
48.5 - 50.0 Gray CLAY, no shell, little
v.f.g. sand, little silt

1500 well installation complete - AS0168.

HMPN - AS0201

Actual Screen interval: 40.5 - 42.5 sump to 43.5

1555 soil samples collected
1558 called C. Hook - C.L. @ 42.5, but a
transition zone from 42.5 - 43.5.
PID Readings: 0.0 at all 1-ft intervals
for the 40' - 50' samples. (in ppm)
1640 well development complete, finishing
well installation w/ grout.

Soil Borings - Description: HMPN - AS0201

40.0 - 42.5 Greenish gray (gray) SHELL -
(gran.) vcg to mg, some whole intact, 2" across
snail and clam shells; some fg to
vfg sand, some silt
42.5 - 43.5 transition zone - same w/ little
clay, large oyster shell
43.5 - 46 Gray CLAY; little to some vfg sand,
trace mg shell; silt possible → (cont.)
easily rolled.

Rite in the Rain

46 - 49.5 Gray vfg SAND - and clay, little to some m.s. shell, silt possible.
49.5 - 50.0 CLAY; (Gray) little vfg sand, trace to none m.g. shell fragments.

1700 raising drill rig mast for day.

HMPN-AS0195

Actual Screen: 41'-43' 2" AS Well
sump to 44'

1320 mobilizing to AS0195
1348 soil samples pulled
1352 calling C. Hook w/ depth to C.L. @ 43' 5/s. He said to set screen @ 41'-43' w/ total depth to 44'
PID Readings: 0.0 ppm @ all 1'-intervals (40'-50')
1405 ~~developing well~~ 20/30 Sand in well annulus

Soil Borings - Description - AS0195

40'-41' Greenish gray fg to vfg SAND with little to some vcg to mg shell fragments
41'-43' Greenish gray SHELL (some 1"- across, intact clam, 1/3"-across intact conch shell, some fg to vfg sand and silt
43'-45.5. Gray clay, little fg to vfg sand, trace cg to mg shell fragments
45.5-49.5 SAND fg to vfg gray and clay, shell fragments little to some cg to mg shell fragments to 48' then decreasing to trace to none.
49.5-50.0 Gray CLAY, little sand (fg to vfg) no shell.

1420 developing well

HMPN-AS0150

Actual Screen: 42'-44'
sump to 45'

~1500 mobilizing to AS0150, drilling commenced.
~1540 soil samples taken - incomplete & slid into deeper bag (sand & shell) so SR compared it to surrounding AS well soil samples-cores (C.L. @ 45', 43' 42.5, 43) So we can push it

Scale: 1 square = _____

Rite in the Rain

to 45' since there is 2'+3' of sand/shell in the bags (but split up & slid into deeper sample & clay slid out prosumeably). So SR called C. Hook and said we can go to 45' & push it, or go somewhere in the middle. So we decided on 42'-44' for the screen, sump to 45'.

550 Well installation commenced.
PID Readings: 0.0 ppm at all 1-ft intervals (incomplete samples due to wash-out)

1610 well development.

1650 grouting well

Boring Log Description: HMPN-AS0150

WASH-OUT*
40'-43.5' Greenish gray SAND - fg to vfg; little silt, trace to little vcg to mg shell
43.5-45.0' Greenish gray SHELL and sand, some silt, trace larger intact shells (actual size)

45.0-47.5' Gray (more bluish) CLAY; trace to some vcg to cg shell fragments, little vfs sand
WASH-OUT*

* the shallow samples appeared to shift deeper. DL noted that part of the clayey soils could not be sampled. Pictures were taken of this missing core. 'fell out.

40'-45' → deeper

1700 Tetratech and GPI left the job site.

ENG/GEO:	S. Rogers	DEV. METHOD:	Pump	LONGITUDE:	

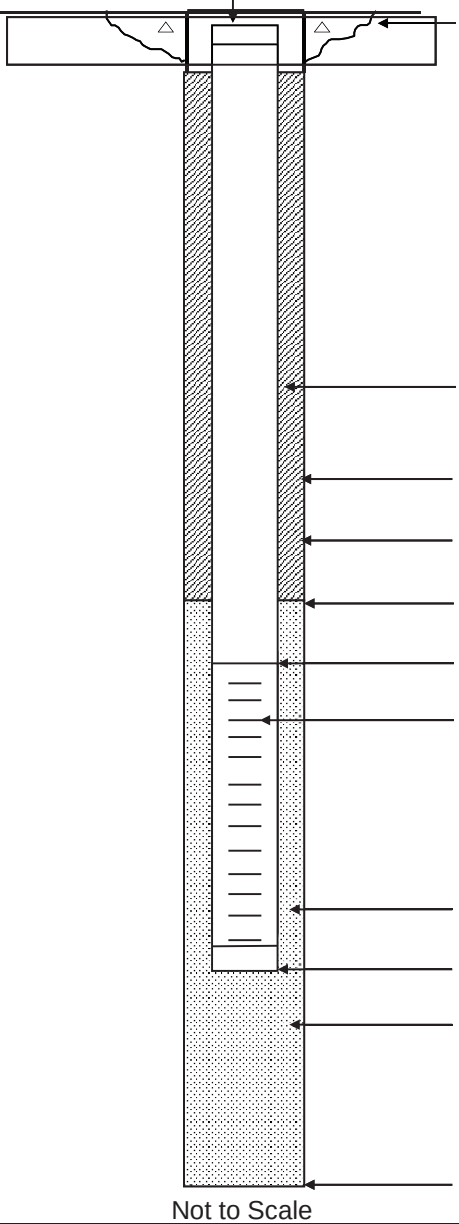
Ground Elevation = 5.9 feet msl
Datum:



Not to Scale

Elevation of Top of Casing: 5.76 / feet msl

Length of Riser (ft): Flush-mount

Type of Surface Casing: Concrete Pad, 8-inch Bolt-down

Type of Surface Seal: Concrete

Type of Riser: 1" Sch. 40 PVC

Borehole Diameter: 4"

Type of Backfill: Bentonite/Portland Cement Grout

Elevation / Depth of Seal: / 37.5'

Type of Seal: 30/65 Silica Sand

Elevation / Depth of Top of Filter Pack: / 39.5'

Elevation / Depth of Top of Screen: / 40.0'

Type of Screen: Sch. 40 Pre-Packed Screen

Slot Size x Length: 0.010 x 10'

Type of Filter Pack: 20/30 Silica Sand

Elevation / Depth of Bottom of Screen: / 45.0'

Elevation / Depth of Bottom of Filter Pack: / 45.0'

Type of Backfill Below Well:
Undisturbed Native Soil

Elevation / Total Depth of Borehole: / 45.0'

のために」ということと、「誰かのために」ということを考えるとき、
になるのは「時間軸」だと思います。
ときに「誰かのために力を発揮しよう」と考えることは、正直言って難しいです。
の中で決断するときは、どの年齢でなにを考えるのか、
軸とともに見極めていくことが重要です。

1450 MB initiate purge at MW08

1515 HMPN-MW0008-025.0-20210129 collected by MB for VOC analysis

1-29-21

HMFN

112608982

1525 MB initiate purge at MW24

1545 HMPN-MW0024-060.0-20210129 collected by MB for VOC analysis

1600 MB initiate purge at MW35

1640 HMPN-MW0035-035.0-20210129 collected by MB for VOC analysis

1650 MB initiate purge at MW34

1730 HMPN-MW0034-015.0-20210129 collected by MB for VOC analysis

1800 MB cleaning / storing equipment. No Drum on pallet. IDW stored in labelled 5-gallon buckets + placed in HMFN trailer with equipment. Locked.

1840 MB offsite.

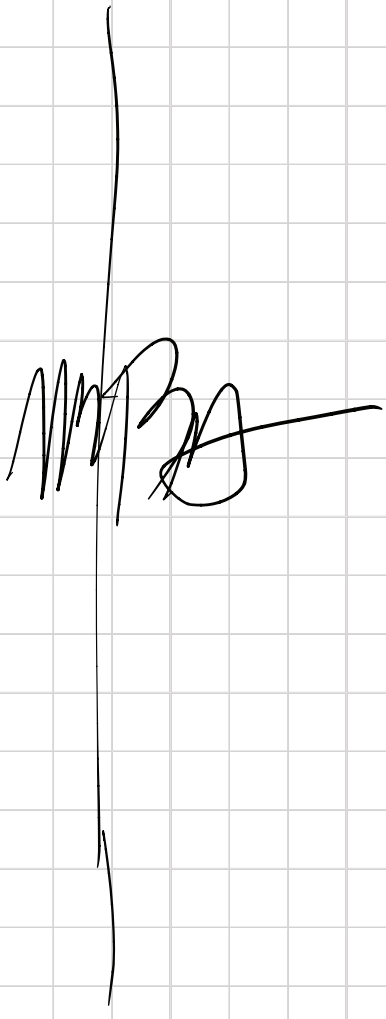
1-30-21

HMFN

1126089 82

Site HMFN
Objective GW Sampling
Personnel MB Melissa Bennett Tetra Tech, Environmental Engineer
Weather 57°F, windy
PPE Level D

0800 MB onsite. HMFN, moving equipment to make way for IDW drum in vehicle.
0830 MB to CC34 to gather drum.
0900 MB at CC34 loading drum into vehicle.
0930 MB at HMFN with 55-gallon drum + place on pallet. MB container all IDW from yesterday into drum, and label (DRUM# 222803)
1030 MB begin calibrating YSI, Lamotte.
1100 Call from home. Babysitter is sick, unable to find replacement. MB cleaning eqm
1110 MB offsite



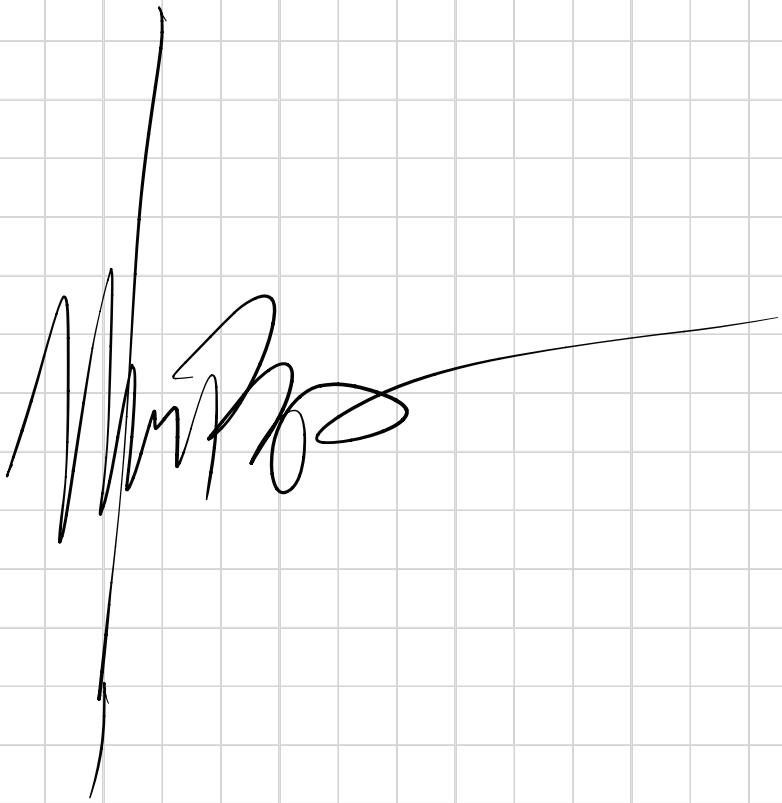
1-31-21

HMFN

112608982

Site HMFN
Objective GW Sampling
Personnel MB Melissa Bennett Tetra Tech, Environmental Engineer
Weather 53°F, sunny
PPE Level D

1240 MB onsite HMFN, gathering equipment
1300 MB calibrating YSI, Lamotte. Tailgate: slip/trip/Falls, biological hazard, heat
1400 MB initiate purge at MW39
1440 HMPN-MW0039-035.0-20210131 collected by MB for VOC analysis (3 VOA vials)
1500 MB initiate purge at MW40
1530 HMPN-MW0040-042.5-20210131 collected by MB for VOC analysis.
1540 MB initiate purge at MW09
1610 HMPN-MW0009-020.0-20210131 collected by MB for VOC analysis.
1620 MB initiate purge at MW04
1700 HMPN-MW0004-010.0-20210131 collected by MB for VOC analysis.
1720 MB repacking samples, so all are double bagged + in full contact with ice
1735 MB clean/store eqt.
1800 MB offsite



2-1-21

HMFN

1126O8982

Site HMFN
Objective GW Sampling
Personnel MB Melissa Bennett Tetra Tech, Environmental Engineer
Weather 62°F, windy
PPE Level D

0630 MB onsite HMFN. Gatering equipment.
0700 MB begin calibration of YSI, Lamotte.
0800 MB initiate purge at MW27
0830 HMPN-MW0027-042.5-20210201 collected by MB for VOC analysis (3 VOA vials)
0840 MB initiate purge at MW28
0915 HMPN-MW0028-047.5-20200201 collected by MB for VOC analysis
0925 MB initiate purge at MW16
0945 HMPN-MW0016-010.0-20210201 collected by MB for VOC analysis
1000 MB initiate purge at MW45
1030 HMPN-MW0045-030.0-20210201 collected by MB for VOC analysis
1040 MB initiate purge at MW02
1110 HMPN-MW0002-035.0-20210201 collected by MB for VOC analysis
1200 MB putting away equipment + cleaning equipment.
1300 MB offsite.

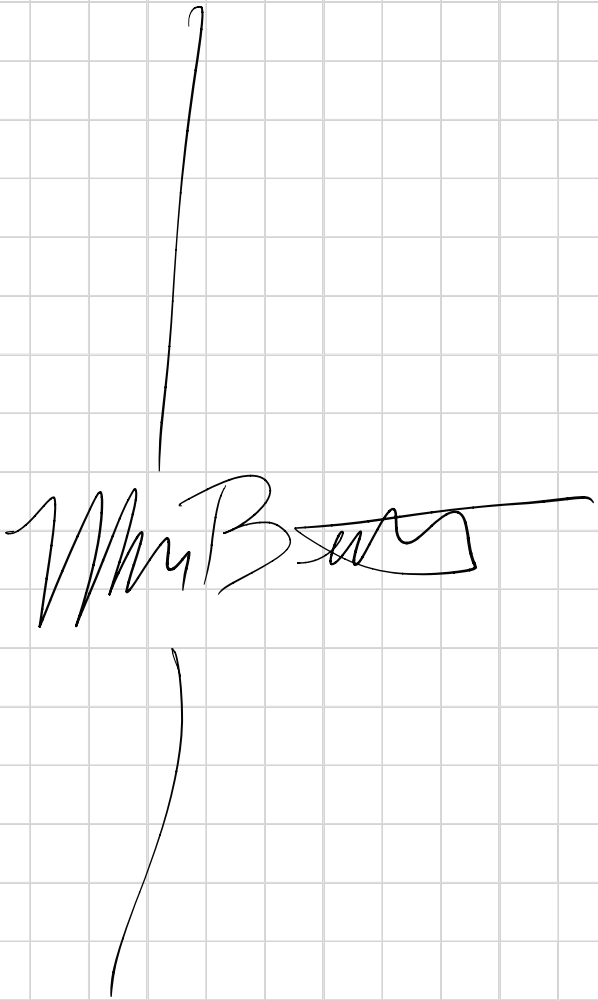
April 16, 2021

HMFN WL

Site	HMF N
Objective	WL collection
Personnel	Melissa Bennett, MB, Tetra tech, Env. Engineer.
PPE	Level D
Weather	Sunny 82 °F

0845	MB onsite gathering paperwork + uncapping wells.
0900	Most wells need to be bailed out. black widow in MW24
1100	all wells uncapped waiting 30 mins for wells to equalize
1130	MB begin collecting WLs
1300	MB finish collecting WLs. offsite to collect YSI + Lamotte. Calibrate offsite
1400	calibration complete MB to HMFN.
1420	MB onsite HMFN. begin purge at MW30
1440	heavy rain. not forecasted to stop until tonight. MB packing up
1500	MB offsite



April 19, 2021

HMFN GW

Site HMF N
Objective GW Sampling
Personnel Melissa Bennett, MB, Tetra tech, Env. Engineer.
PPE Level D
Weather clouds, scatted showers

0800 MB onsite CRCA phase II.
0830 phase II lifted. MB gathering materials.
0845 MB to HMFN to calibrate YSI, Lamotte
0930 calibration complete. Phase I. MB organize vehicle for sampling in the rain.
1000 MB initiate purge at MW40
1030 MB collect HPFN-MW0040-042.5-20210419
1040 MB initiate purge at MW39
1110 MB collect HPFN-MW0039-035.0-20210419
1120 MB uncap MW44, overflows with bubbles (did same during WL collection) MB leaves uncapped to lower DO before begining purge. MB install tubing at MW41.
1135 MB initiate purge at MW41
1200 MB collect HMPN-MW0041-035.0-20210419
1215 MB initiate purge at MW44
1245 Phase I
1250 MB collect HMPN-MW0044-045.0-20210419
1300 heavy rain
1315 rain lets up momentarily. MB initiate purge at MW30
1410 MB collect HMPN-MW0030-025.0-20210419
1415 MB initiate purge at MW31
1545 MB collect HMPN-MW0031-035.0-20210419 very high DO!
1550 MB initiate purge at MW29
1620 MB collect HMPN-MW0029-015.0-20210419
1630 MB cleaning equipment
1700 MB offsite

April 20, 2021

HMFN GW

Site HMF N
Objective GW Sampling
Personnel Melissa Bennett, MB, Tetra tech, Env. Engineer.
PPE Level D
Weather Thunderstorms,

0800 MB onsite. Phase II
1020 Phase II terminated. MB gathering equipment, containerizing IDW.
1035 MB calibrating equipment.
1100 MB initiate purge at MW 36
1125 MB collect HMPN-MW0036-015.0-20210420
1130 MB initiate purge at MW11
1200 MB collect HMPN-MW0011-025.0-20210420
1210 Rain begins. MB check lightning warning/watch. Okay.
1220 MB setup at MW0009 + begin purge
1245 MB collect HMPN-MW0009-020.0-20210420
1300 MB initiate purge at MW33. Heavy rain
1330 MB collect HMPN-MW0033-047.5-20210420
1335 rain intensifies. Not feasible to sample currently. Phase I.
1400 Phase II
1430 phare II terminated
1440 MB initiate purge at MW32
1520 MB collect HMPN-MW0032-042.5-20210420
1530 Phase II. MB putting away equipment.
1600 MB offsite

April 21, 2021

HMFN GW

Site — HMF N
Objective — GW Sampling
Personnel — Melissa Bennett, MB, Tetra tech, Env. Engineer.
PPE — Level D
Weather — cloudy 76- 84°F

0730 MB onsite
0740 MB gathering equipment + calibrating
0810 calibration complete
0830 MB containerizing IDW from yesterday
0845 MB mobe to MW47. repacking samples with fresh ice
0900 MB initial purge at MW47
0940 MB collect HMPN-MW0047-025.0-20210421
0950 MB initial purge at MW46. email ENCO + PM.
1020 MB collect HMPN-MW0046-015.0-20210421
1030 MB initiate purge at MW38
1050 MB collect HMPN-MW0038-020.0-20210421
1100 MB initiate purge at MW037
1130 MB collect HMPN-MW0037-010.0-20210421
1145 MB initiate purge at MW27
1210 MB collect HMPN-MW0027-042.5-20210421
1220 MB initiate purge at MW28
1250 MB collect HMPN-MW0028-047.5-20210421
1305 MB initiate purge at MW4.
1325 MB collect HMPN-MW0004-010.0-20210421
1340 MB initiate purge at MW10
1405 MB collect HMPN-MW0010-010.0-20210421
1420 MB initiate purge at MW45
1450 MB collect HMPN-MW0045-030.0-20210421
1500 MB initiate purge at MW34

Date 19, 20, 21

April 22, 2021 HMFN GW

Site HMF N / AOSB
Objective GW Sampling / Air Sampling / Drum Sampling.
Personnel Melissa Bennett, MB, Tetra tech, Env. Engineer.
PPE Level D
Weather Sunny 64°F-

0720 MB onsite AOSB preparing air canisters + paperwork
0740 Canniste- Serial # and Sample ID:

AMB01	JS-017
AMB02	JS-068
AMB03	JS-070
AMB04	JS-077
AMB05	JS-086

0819 MB set up AOSB-AMB01-20210422 -30 mm Hg, 64°F
0830 MB set up AOSB-AMB02-20210422 -30 mm Hg, 64°F
0833 MB set up AOSB-AMB03-20210422 -30 mm Hg, 64°F
0835 MB set up AOSB-AMB04-20210422 -30 mm Hg, 64°F
0837 MB set up AOSB-AMB05-20210422 -30 mm Hg, 64°F
0840 MB filling out COC for summas.
0855 MB setting up DRUM sampling
0900 AOSB-DRUM217977-20210422 collected for PFAS (Dan onsite)
0910 AOSB-DRUM217981-20210422 collected for PFAS
0915 AOSB-DRUM217974-20210422 collected for PFAS
0925 AOSB-DRUM217973-20210422 collected for PFAS
0935 AOSB-DRUM217971-20210422 collected for PFAS
0945 AOSB-DRUM217972-20210422 collected for PFAS.
0955 MB securing IDW and prepairing PFAS coc for GEL Labs.
1005 MB offsite AOSB to HMFN
1020 MB onsite HMFN, gathering equipment + containerizing IDW.
1045 MB calibrating YSI + Lamotte.
1100 Calibration complete, MB mobe to MW24
1105 MB initiate purge at MW24
1140 MB collect HMFN-MW0024- -20210422

1150 MB initiate purge at MW2
1220 MB collect HMPN-MW0002-035.0-20210422
1230 MB initiate purge at MW0008
1255 MB collect HMPN-MW0008-0.25 -20210422
1310 MB initiate purge at MW42 (install new tubing - HDPE + weekly call)
1345 MB collect HMPN-MW0042-042.5 - 20210422
1355 MB initiate purge at 43 (install new tubing - HDPE)
1445 MB collect HMPN-MW0043 -035.0-20210422
1450 MB to badging to meet ENCO courier — offsite.
1510 MB relinquish samples.
1515 MB to HMFN
1530 MB at HMFN, finishing cleaning of equipment and containerizing IDW.
1545 MB offsite to AOSB
1600 MB at AOSB.
1619 MB pick up AOSB-AMB01-20210422 - 0 mm Hg, 79 °F
1630 MB pickup AOSB-AMB02-20210422 - 4 mm Hg, 79 °F
1633 MB pick up AOSB-AMB03-20210422 - 2 mm Hg, 79 °F

RE: Laboratory Results for
Project Number: 112G08982, Project Name/Desc: NASA KSC HMFN
ENCO Workorder(s): AD05339

Dear Chris Hook,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Friday, August 28, 2020.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

SDG: AD05339-TE015

Overview

All samples submitted were analyzed by Environmental Conservation Laboratories, Inc. in accordance with the methods referenced in the laboratory report. Any particular difficulties encountered during sample handling and processing will be discussed in the Remarks section below.

Remarks

List of instruments used:

Analytical and Preparation Method	SOP Reference Instrument
TO-15	OVGCMS7

Analysis: TO-15

The calibration curve and the continuing calibration standards are in ppbv. Raw data is reported in pptv. Per request, results may be reported in a unit other than ppbv which is obtained through a conversion factor set up in the laboratories' database.

Acetone and methylene chloride is a common laboratory contaminant.

Affected Samples: AA62257-CCV1, HMFN-VMP1-Field-20200826[AD05339-01], HMFN-VMP2-P.Lot-20200826[AD05339-02]
Upon initial analysis the continuing verification standard exhibited low bias for 1,2,4-trichlorobenzene. The associated sample results were non-detect, but instrument sensitivity was verified by analyzing a standard with a concentration equivalent to the reporting limit. Analyte(s) in the associated sample were not detected.

Affected Samples: 0I02022-BLK1, HMFN-VMP1-Field-20200826[AD05339-01], HMFN-VMP2-P.Lot-20200826[AD05339-02]
Result for acetone and/or methylene chloride may be biased high due to positive results in the method blank.

Affected Samples: 0I02022-BLK1, HMFN-VMP2-P.Lot-20200826[AD05339-02]
The method blank had a positive result for methylene chloride; however the concentration in the method blank is less than 10% of the sample result.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Kaitlin Dylnicki
Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*****	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
J-01	Result may be biased high due to positive results in the associated method blank at a concentration above the MDL and/or greater than one-half the MRL.
J-05	Result may be biased low. Associated calibration verification standard did not meet the minimum control limit.
O-01	This compound is a common laboratory contaminant.
QB-01	The method blank had a positive result for the analyte; however, the concentration in the method blank is less than 10% of the sample result. There is minimal impact to the data.
QB-02	The method blank contains analyte at a concentration above the MDL and/or greater than one-half the MRL. The analyte was not detected in the sample.

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

B	The analyte was detected in the associated method blank.
D	The sample was analyzed at dilution.
J	The reported result is an estimated value.
U	The analyte was analyzed for but not detected to the level shown, adjusted for actual sample preparation data and moisture content, where applicable.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence (85% or greater confidence) to make a “tentative identification".
Q	One or more quality control criteria failed.

This is an automated notification from our laboratory information management system (LIMS), indicating the samples we have recently received and their associated analyses. Should any of the following information be in error, please contact us immediately.

Thank you for choosing Environmental Conservation Laboratories. Should any events occur that delay the processing of your samples or inhibit our ability to complete the project within the projected time frame you will be contacted.

Sincerely,

Kaitlin Dylnicki

I Lori S. Mangrum, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (407) 826-5314 if there are any questions or problems with the enclosed electronic deliverables.

RE: Laboratory Results for
Project Number: 112G08982, Project Name/Desc: NASA KSC HMFN
ENCO Workorder(s): AD05968

Dear Chris Hook,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Friday, September 11, 2020.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

Overview

All samples submitted were analyzed by Environmental Conservation Laboratories, Inc. in accordance with the methods referenced in the laboratory report. Any particular difficulties encountered during sample handling and processing will be discussed in the Remarks section below.

Remarks

List of instruments used:

Analytical and Preparation Method	SOP Reference Instrument
TO-15	OVGCMS7

Analysis: TO-15

The calibration curve and the continuing calibration standards are in ppbv. Raw data is reported in pptv. Per request, results may be reported in a unit other than ppbv which is obtained through a conversion factor set up in the laboratories' database.

Methylene chloride is a common laboratory contaminant.

Affected Samples: AA62436-CCV1, HMFN-VMP1-Field-20200909[AD05968-01], HMFN-VMP2- P.Lot-20200909[AD05968-02
Result for 1,2,4-trichlorobenzene may be biased low. The continuing calibration verification standard exhibited low bias for 1,2,4-trichlorobenzene; the associated sample had ND (non-detect) results, but sensitivity was verified by analyzing a standard with a concentration equivalent to the reporting limit.

Affected Samples: 0I14028-BS1, 0I14028-BSD1, HMFN-VMP1-Field-20200909[AD05968-01], HMFN-VMP2- P.Lot-20200909[AD05968-02]
The associated laboratory control sample for 1,2-dichlorobenzene exhibited high bias. Analyte(s) was not detected in the sample.

Affected Samples: 0I14028-BLK1, HMFN-VMP1-Field-20200909[AD05968-01], HMFN-VMP2- P.Lot-20200909[AD05968-02]
Result for methylene chloride may be biased high due to positive results in the associated method blanks.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Kaitlin Dylnicki
Project Manager

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*****	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
J-01	Result may be biased high due to positive results in the associated method blank at a concentration above the MDL and/or greater than one-half the MRL.
J-05	Result may be biased low. Associated calibration verification standard did not meet the minimum control limit.
O-01	This compound is a common laboratory contaminant.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

B	The analyte was detected in the associated method blank.
D	The sample was analyzed at dilution.
J	The reported result is an estimated value.
U	The analyte was analyzed for but not detected to the level shown, adjusted for actual sample preparation data and moisture content, where applicable.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence (85% or greater confidence) to make a “tentative identification".
Q	One or more quality control criteria failed.

I Lori S. Mangrum, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (407) 826-5314 if there are any questions or problems with the enclosed electronic deliverables.

RE: Laboratory Results for
Project Number: 112G08982, Project Name/Desc: NASA KSC HMFN
ENCO Workorder(s): AD07766

Dear Chris Hook,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Friday, November 13, 2020.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

SDG: AD07766-TE015

Overview

All samples submitted were analyzed by Environmental Conservation Laboratories, Inc. in accordance with the methods referenced in the laboratory report. Any particular difficulties encountered during sample handling and processing will be discussed in the Remarks section below.

Remarks

List of instruments used:

Analytical and Preparation Method	SOP Reference Instrument
TO-15	OVGCMS7

Analysis: TO-15

The calibration curve and the continuing calibration standards are in ppbv. Raw data is reported in pptv. Per request, results may be reported in a unit other than ppbv which is obtained through a conversion factor set up in the laboratories' database.

Manual integrations were performed on samples associated with TO-15. All data & explanations are included in the raw data section of the report.

Acetone is a common laboratory contaminant.

Affected Samples: 0K15003-BS1, 0K15003-BSD1, HMFN-VMP01-20201111[AD07766-01], HMFN-VMP02-20201111[AD07766-02]
The associated laboratory control sample exhibited high bias for multiple analytes. Analytes not detected in the sample.

Affected Samples: 0K15003-BLK1, HMFN-VMP01-20201111[AD07766-01], HMFN-VMP02-20201111[AD07766-02]
Result may be biased high due to positive results for acetone in the associated method blank.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Kaitlin Dylnicki
Project Manager

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*****	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
J-01	Result may be biased high due to positive results in the associated method blank at a concentration above the MDL and/or greater than one-half the MRL.
O-01	This compound is a common laboratory contaminant.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

B	The analyte was detected in the associated method blank.
D	The sample was analyzed at dilution.
J	The reported result is an estimated value.
U	The analyte was analyzed for but not detected to the level shown, adjusted for actual sample preparation data and moisture content, where applicable.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence (85% or greater confidence) to make a “tentative identification".
Q	One or more quality control criteria failed.

Manual Integration Review Form

ENVIRONMENTAL CONSERVATION LABORATORIES, INC. ☐ Cary ☐ Jacksonville ☑ Orlando

I hereby attest that the manual integrations contained in this package have been thoroughly reviewed and are in agreement with the associated hardcopy data.

The electronic files listed below have been reviewed for accuracy, completeness and comply with ENCO labs QA-11 Manual Integration Policy including:

- "Before" and "After" chromatograms are provided
- Manual integrations are indicated on expanded scale "after" chromatograms at a scale large enough to see the manual integration performed.
- Reintegration technique marked if available on the data system
- Technical justification for manual integration
- Appropriate flags indicating which analytes were manually integrated are included in the raw data
- Analyst's initials and date.
